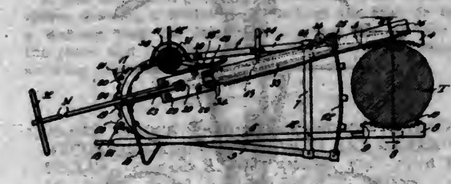
1. A lock nut comprising in combination with a bolt, a binding nut, a locking nut, a substantially V-shaped washer located between said nuts, engaging means between the washer and bolt, whereby the former is permitted movement longitudinally of the bolt, but held against rotary movement and means located upon opposite faces of the substantially V-shaped washer for engagement with the notches provided in the adjacent faces of the nuts.

1,488,070. LOCK WASHER. FRANK EMIL SEIFERT, Somerville, N. J. Filed Nov. 28, 1921. Serial No. 518,338. 1 Claim. (Cl. 151—35.)

A lock washer comprising in combination, a frusto-conical body portion, said body portion having slots formed transversely thereof, and having slots communicating with the transversely extending slots, the last mentioned slots extending in parallel relation with the periphery of the body portion, the sections of the body portion between the transverse slots being twisted to extend upwardly presenting piercing corners to engage a nut, and said piercing corners adapted to move over the contacting surface of a nut when the frusto-conical body portion is depressed.

1,488,071. ENGINE-LATHE TURRET. WILLIAM CLIFFORD SHAW, Woodstock, Ontario, Canada, assignor to Canadian Linderman Company, Limited, Woodstock, Ontario, Canada. Filed Dec. 20, 1922. Serial No. 608,050. 2 Claims. (Cl. 29—48.)

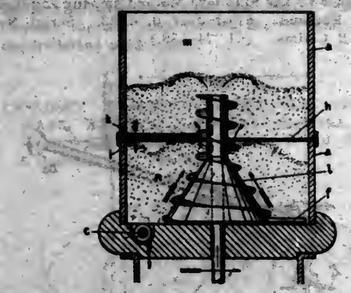
1. In a device of the character described and in combination, a tool post, a base for the same, a cross-slide supporting the base, a laterally extending supporting member connected to the tool post, and means for slidably engaging and supporting the end of the supporting member.



1,488,072. VEHICLE HEADLAMP. FREDERICK H. SHORB, San Diego, Calif., assignor of one-half to Wayne M. Knight and Thomas L. Knight, both of San Diego, Calif. Filed Dec. 23, 1921. Serial No. 524,521. 5 Claims. (Cl. 240—41.)

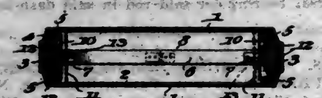
1. An anti-glare headlight lamp, including a housing, a pair of concave reflectors, one positioned above the other in said housing, a horizontal support extending across the middle of said housing at the juncture of said concave reflectors and secured to the opposite sides of said housing, said support being provided with in-

wardly extending flanges and with a reflecting medium on its inner side and a lamp positioned on the inner side of said support extending toward said reflectors.



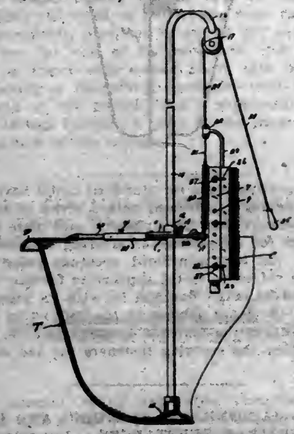
1,488,073. SAWING MACHINE. DANIEL W. SMITH, Bangor, Me. Filed Dec. 29, 1921. Serial No. 525,582. 1 Claim. (Cl. 143—61.)

A sawing machine comprising a substantially U-shaped frame having one of its arms longer than the other, a horizontally swinging track mounted on the frame between the arms, a guide for the track, a longitudinally reciprocable saw mounted on said track, a push and pull rod connected with said saw, the outer end of said rod being capable of free vertical movement to permit its elevation to be varied, a cross-brace extending transversely between and connected at its end to the aforesaid arms, said brace being provided with a slot and having closely spaced notches formed on one edge of the slot, a bar extending through the slot, said bar having a lateral projection adapted to be selectively disposed in one of said notches, said bar being formed at its outer end with a slot, the outer end of the long arm of the aforesaid frame being also provided with a slot, jaws arranged in said slot and pivotally connected intermediate their ends with the arms and the bar respectively, said jaws having limited swinging movement in one direction and having their inner toothed edges shaped to conform to the trunk of a tree, and an adjustable spring device mounted on the upper side of the frame, said device embodying a pivoted spring-pressed lever engaged with the track for exerting a yielding pressure on the latter.



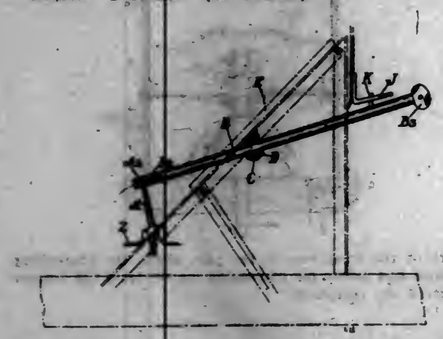
1,488,074. APPARATUS FOR DISPENSING POWDEROUS MATTER. OTTO SOINE and CARL PETERSEN, Brunswick, Germany, assignors to Amme, Giesecke & Konegen, Aktiengesellschaft, Braunschweig, Germany, Brunswick, Germany, a Corporation of Germany. Filed Dec. 12, 1923. Serial No. 680,285. 2 Claims. (Cl. 221—129.)

1. An apparatus for storing and dispensing powderous matter, comprising a receptacle, means within said receptacle located away from the bottom thereof for supporting the powderous matter and permitting the passage of powderous matter to the bottom part of the receptacle, means to return a part of the matter from the bottom



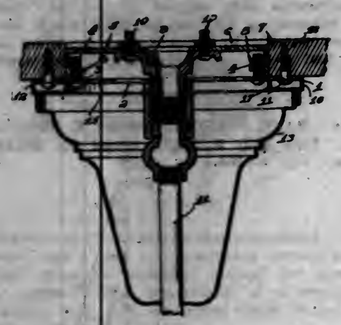
part of the receptacle to the part above the supporting means, and means for dispensing matter from the bottom part of the receptacle.

1,488,075. COLLAPSIBLE FORM. RALPH T. TAYLOR, Pasadena, Calif., assignor to W. A. Taylor & Sons, Pasadena, Calif., a Partnership composed of W. A. Taylor, Rea P. Taylor, and Ralph T. Taylor. Filed May 7, 1923. Serial No. 637,281. 5 Claims. (Cl. 25—131.)



1. In a collapsible core, the combination with relatively expansible and contractible sides, of relatively expansible and contractible ends adapted to cooperate therewith, flexible connections between the sides which are positioned for operation by the ends when the latter are contracted, and means for expanding and contracting the ends.

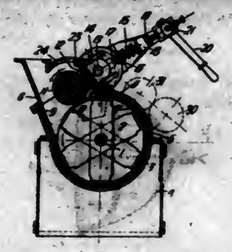
1,488,076. BATH FIXTURE. MOSES E. TEBO, Laurel, Mont. Filed July 9, 1923. Serial No. 650,369. 3 Claims. (Cl. 4—158.)



1. A bath fixture comprising, in combination, a post, a suction cup at one end of the post, a plate operatively engaged with the post and supported thereby, a second plate slidably engaged with the first named plate, a cleaning element carried by the second plate, and holding members operatively engaged with the first named plate.

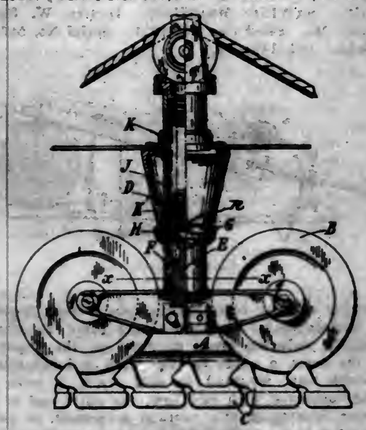
1,488,077. CHANGE-SPEED-GEAR-OPERATING MECHANISM. WALTER RAYMOND TURNER, Coventry, England, assignor to The Standard Motor Company Limited, Coventry, England. Filed July 6, 1923. Serial No. 649,872. 2 Claims. (Cl. 74—39.)

1. In a change speed gear mechanism for motor vehicles, the combination with a universally mounted change speed lever, of a rod having a ball-and-socket connection with said lever and running through the dash-board, and a universal bearing for said rod in said dash-board.



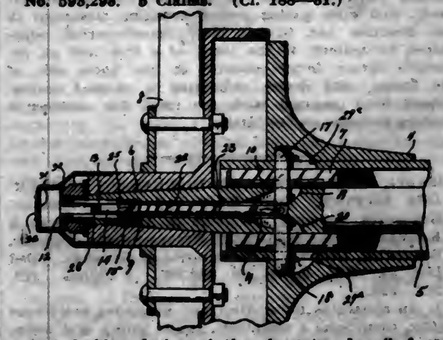
1,488,078. ATTACHING MEANS FOR ELECTRICAL FIXTURES. BENTON A. VANDY, Rochester, N. Y., assignor to Sarah Vandy, Rochester, N. Y. Filed June 14, 1921. Serial No. 477,600. 3 Claims. (Cl. 247—21.)

1. A supporting plate for standard outlet boxes having a central opening and formed with a series of supporting fastener openings near its periphery, said plate also having openings for the passage of securing fasteners for an outlet box, the last mentioned openings being so positioned with reference to the supporting fastener openings that a standard outlet box will lie with its edge in abutment when the inner surface of the supporting plate between the supporting fastener openings and the openings through which the securing fasteners for the outlet box pass.



1,488,079. MACHINE FOR GRINDING AND PULVERIZING FRIABLE SUBSTANCES. JOHANNES PIETER VAN GELDER, Granville, near Sydney, New South Wales, Australia. Filed Aug. 22, 1923. Serial No. 658,751. 5 Claims. (Cl. 83—11.)

1. A machine for pulverising friable material, comprising a revoluble beater shaft, beater blades carried on the shaft, a horizontally disposed casing enclosing the beater blades, a grating in the lower part of the casing, a hopper at one side of the upper part of the casing, a shrouded pocket in the upper part of the casing, a pair



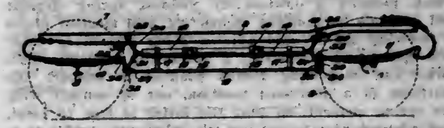
of rotary grinding rolls mounted in said pocket and disposed with their nip in the path of flight of particles of the material thrown upwards by the beater blades.

1,488,080. VEHICLE HAVING SELF-LAYING TRACK. SPIRITO MARIO VIALE, Coventry, England. Filed June 7, 1923. Serial No. 643,846. 5 Claims. (Cl. 305—9.)

1. In a vehicle having self-laying tracks, the combination of a flexible track, a bogie, guide wheels mounted upon said bogie and engaging said flexible track, a support for said bogie, a universal joint connecting said bogie and said support, and means adapted yieldingly to resist movement of said bogie relatively to its support.

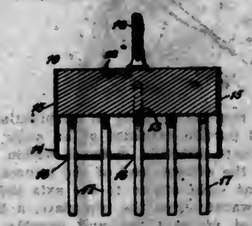
1,488,081. VEHICLE LOCKING DEVICE. JOHN A. WATSON, Cincinnati, Ohio. Filed Oct. 9, 1922. Serial No. 593,298. 5 Claims. (Cl. 188—31.)

1. A locking device of the character described comprising a shaft having a bore extending through the ends



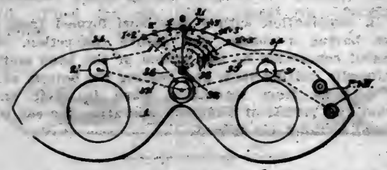
thereof, and branch passages leading from the bore, and locking means slidable in the bore and branch passages and arranged to engage a portion of the housing of the shaft.

1,488,082. METHOD AND MACHINE FOR PREPARING FRUIT FOR CANNING. GEORGE WILCOX, Riverside, Calif., assignor to California Canning Machinery Co., a Corporation of California. Filed Jan. 13, 1923. Serial No. 612,510. 63 Claims. (Cl. 146—28.)



1. The method of preparing drupaceous fruit which includes drawing a flexible loop through the fruit in such a manner that the loop passes across the surface of the stone and in substantial contact therewith, thereby severing the meat of the fruit from the stone.

1,488,083. SHOCK ABSORBING AND DISTRIBUTING MECHANISM FOR AUTOMOBILES AND OTHER VEHICLES. EDWARD R. WOLF, Miami, Fla. Filed Jan. 16, 1922. Serial No. 529,564. 20 Claims. (Cl. 280—104.)



9. In combination, vehicle running gear and a body, vehicle springs interposed between and connecting the body with said running gear, a frame mounted on said springs and disposed below said body, shock-transmitting means carried on said frame, and shock-absorbing means through which pressure is transmitted between said shock-transmitting means and one or more of said first-named elements.

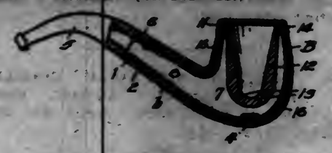
1,488,084. NOZZLE FOR PLANT SPRAYERS. KELLEY G. YONCE, Ridge Spring, S. C. Filed Aug. 17, 1922. Serial No. 582,463. 2 Claims. (Cl. 299—101.)

1. A discharge nozzle for insecticide sprayers and the like comprising a head block having a liquid inlet and a discharge passage leading from said inlet to the underside of said block, a trough secured to the block and disposed beneath the bottom face thereof and having discharge outlets in the bottom thereof, flexible discharge strips arranged at one end beneath the bottom of the block and extending into the trough and outwardly through the discharge outlets thereof, and a handle for manipulating said nozzle.

1,488,085. ELECTRIC SPECTACLE, GOGGLE, OR MASK LIGHT. LADISLAUS ZACHARA, Bremerton, Wash. Filed Mar. 12, 1920. Serial No. 365,200½. 5 Claims. (Cl. 240—2.)

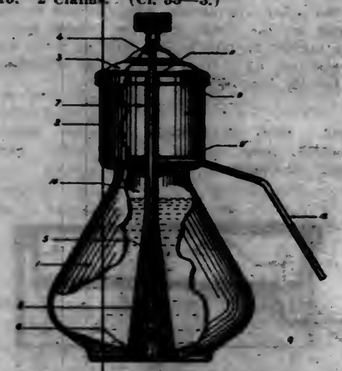
1. An electric spectacle, goggle or mask having on its surface two combined lamps for lighting, one being inside the other, the outside lamp formed to constitute a reflector for the inside lamp, the outside lamp having coloring applied thereto to eliminate glare, or mirroring to increase the light from inside walls or outside walls of the outside lamp.

1,488,086. HOG WATERER. CHARLIE ZIEGLOWSKY, Ainsworth, Iowa. Filed Apr. 3, 1923. Serial No. 629,632. 2 Claims. (Cl. 119—73.)



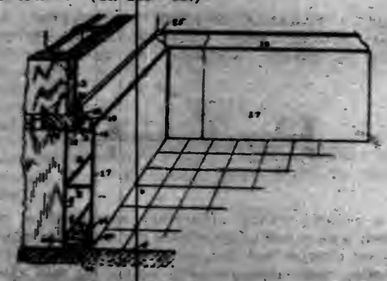
1. A hog watering device including a receptacle, a trough disposed within the receptacle and having peripheral flanges resting on the edge of the receptacle and spacing the walls of the trough from the side walls of the receptacle, openings in one of the said flanges, a cover over one end of the receptacle and trough and having its upper wall spaced above said openings, the cover having a depending apertured wall intermediate the length of the trough, and a supplemental mud receiving trough forming a part of the cover and in the other portion of the trough.

1,488,087. PARALLEL-RULING APPARATUS. GIOVANNI ZOVICH, Trieste, Italy. Filed Sept. 8, 1921. Serial No. 499,222. 4 Claims. (Cl. 33—109.)



1. A parallel ruling apparatus, comprising a ruler provided with a pair of transverse slots, a roller adapted to project through each slot, an axle carrying said rollers, and spring connections rotatably connecting said axle to said ruler, and normally maintaining said ruler out of contact with the surface on which said rollers travel, said spring connections comprising two leaf springs, one end of each spring being secured to said ruler and the other end being provided with an eye through which said axle rotatably passes.

1,488,088. TOBACCO PIPE. ROLAND T. WRIGHT, St. Louis, Mo., assignor of one-half to John H. Buncher, St. Louis, Mo. Filed Dec. 12, 1921. Serial No. 521,676. 4 Claims. (Cl. 131—12.)

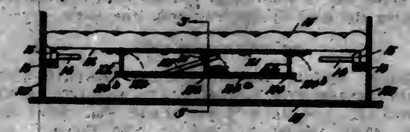


1. In combination with a pipe bowl formed from two halves having a tongue and groove connection, of a concealed connection at the bottom of the bowl sections for hingedly uniting them and holding the bottom of the bowl sections from separating when in their closed position and permit of complete separation thereof when the bowl sections are opened.

1,488,089. EXPRESS COFFEEPOT. MARIO BONTEMPI, New York, N. Y. Filed Oct. 25, 1922. Serial No. 596,815. 2 Claims. (Cl. 53—3.)

1. A coffee pot comprising a boiler open at the top, a cup having a bottom to be fitted to the top of the boiler and close same, the boiler having a cavity in its bottom, a cover for the cup, and a connecting member passing through said cover and the bottom of the cup and fastened to the bottom of the said boiler adjacent the centre of said cavity, to hold the cup, the cover, and the boiler together.

1,488,090. CONDUIT BASEBOARD. JACOB BUHR, Cleveland, Ohio, assignor to Charles Woodward, Cleveland, Ohio. Filed Mar. 2, 1922. Serial No. 540,560. 16 Claims. (Cl. 189—65.)



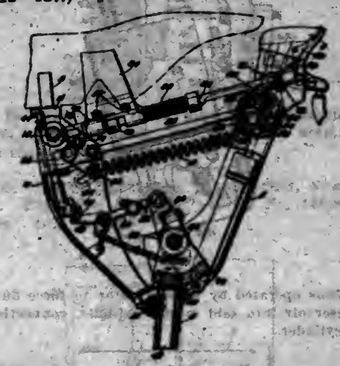
1. A metal base-board member having a horizontal wall provided with vertically extending prongs adapted to be forced upwardly into an overhanging portion of a wall to anchor said member, and a separate floor strip detachably connected with the bottom portion of said member.

1,488,091. CASE OR CONTAINER FOR TOBACCO CARTRIDGES. GEORGE FREDERICK BULL, Birmingham, England. Filed May 24, 1922. Serial No. 563,288. 2 Claims. (Cl. 206—41.)

1. In a case or container for tobacco cartridges having a cartridge holder and a tubular plunger for ejecting the tobacco therefrom, means for securing the lid or cover of the case or container in the closed position, comprising a headed pin or stud upon one member of the case or container, a longitudinal slot in the plunger of such width as to contain the body of the stud, and an enlargement in said slot designed to permit the passage of the head upon the closing of the case with the plunger in its outermost position and to secure the parts of said case against opening when the plunger is depressed.

1,488,092. ANTISAGGING ADJUNCT FOR FLEXIBLE BEDS. RALPH N. BURBANK, Somerset, Mass. Filed May 16, 1923. Serial No. 639,273. 6 Claims. (Cl. 5—226.)

1. A converting adjunct for use with a spring bed which includes a downwardly yielding spring element and a frame horizontally supporting said element above a receiving space; said adjunct being formed to enter said space, and comprising a practically inflexible platform, and supporting means adapted to support the platform in a depressed position, out of contact with the spring element, so that the latter is free to yield, and adapted also to support the platform rigidly in a raised position in contact with said element, so that the bed is converted into an unyielding seat.



1,488,093. SAFETY RAZOR AND THE LIKE. CHARLES E. CARPENTER, Chicago, Ill., assignor to T-C Kit Strop Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1922. Serial No. 560,009. 5 Claims. (Cl. 30—12.)

5. A safety razor comprising in combination a handle having its end portion extended at an angle and bifurcated, a pin plate pivotally mounted within said bifurcated portion, the extreme end of the bifurcated portion being formed at right angles to the axis thereof, a pin projecting outwardly from the pin plate, a blade guard loosely mounted on said pin and capable of pivotal movement thereon, there being an enlarged head on the extreme end of the pin above the front face of the guard, a blade seated against the guard and having in its upper portion a slot having an enlarged passage of size to pass the head of the pin, whereby the blade

may be set over the head of the pin and then shifted sidewise into position on the guard, and whereby when the handle is turned with respect to the guard to bring the extreme end of its bifurcated portion square against the back face of the guard the pin is drawn rearwardly with respect to the guard to thereby clamp the blade against the guard, substantially as described.

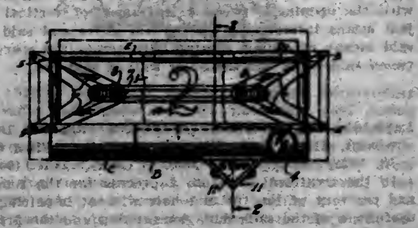
1,488,094. SHOE-SUPPORTING JACK. JAMES CAVANAGH, Dorchester, and LAURENCE E. TOPHAM, Swampscott, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 5, 1920. Serial No. 356,565. 12 Claims. (Cl. 12—127.)

1. A shoe supporting jack having, in combination, a support for a lasted shoe, one or more devices for engaging the upper and causing the same to conform to the last, operating to hold the upper in position to be attached to a ribbed sole during the formation of a line of fastenings through the upper and rib in a plane parallel to the sole surface, means for supporting said devices for movement into and out of operating positions, and automatically acting mechanism for actuating said devices.

1,488,095. METAL DOOR. ANDREW J. CONNELL, College Point, N. Y., assignor to Superior Steel Door and Trim Co., Inc., College Point, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 477,903. 3 Claims. (Cl. 189—33.)

1. A metal door or like structure embodying, in combination, a frame member comprising a single piece of sheet metal bent to provide a substantially channel-shaped body portion, integral molding portions and portions disposed in substantially the plane of the side walls of the body portion and also being further bent to provide portions extending toward the center line of the said body portion at substantially a right angle to the said side walls, said inwardly and centrally disposed portions forming the sides and bottom of a panel socket; and a panel seated in said socket.

1,488,096. TIRE TOOL. SAMUEL L. CRAGGS, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,255. 2 Claims. (Cl. 152—27.)



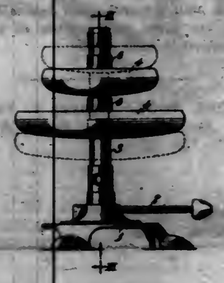
1. A tire tool comprising a pair of relatively rigid members and a handle, one of said members being comparatively short and adapted to hook around the inner margin of one side of a tire casing and the other of which is curved conformably to the outside of the casing and of sufficient length to engage the outer portion of the casing at a point remote from the point engaged by the short member when the handle has been swung to spread the casing.

1,488,097. DENTIFRICE. HENRY N. CREGER, San Francisco, Calif. Filed Mar. 9, 1922. Serial No. 542,471. 5 Claims. (Cl. 167—9.)

1. A dentifrice having as a principal ingredient thereof the gummy exudation of the *Eucalyptus rostrata* in a vehicle of dental paste.

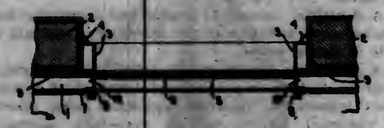
3. A dentifrice comprising in combination, extract of *Eucalyptus rostrata* in a vehicle of dental paste composed of gum tragacanth, glycerine, powdered soap, essential oils, powdered myrrh, calcium carbonate, saccharine, zinc chloride and water.

1,488,098. AUTOMOBILE LICENSE-PLATE HOLDER. CONSTANTINOS CRITHARIS, St. Louis, Mo. Filed May 21, 1923. Serial No. 640,444. 3 Claims. (Cl. 40—155.)



1. A license-plate holder comprising a frame composed of a plurality of telescopically shiftable members for adjustably supporting license-plates of varying dimensions, in combination with means for releasably locking the frame-members in adjusted shifted positions, said means including a slotted bar disposed longitudinally of the frame and pairs of arms having sliding and pivoted connection with the bar and pivoted connection at their ends with the frame members.

1,488,099. DENTAL APPLIANCE. LEON DE FERNELMONT, Clifton, N. J. Filed Mar. 16, 1923. Serial No. 625,576. 4 Claims. (Cl. 126—350.)

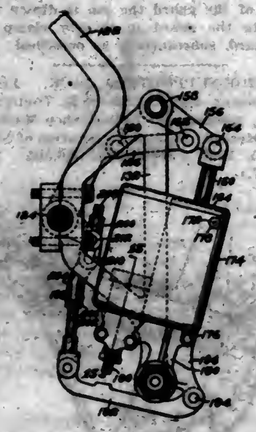


4. In a dental appliance, a burner comprising a suitable base having a gas inlet tube and upright flame tube, and a heating tray surrounding the flame tube and pro-

vided with a sleeve frictionally embracing said flame tube for adjustably conditioning the tray upwardly and downwardly along the tube toward and away from the

flame, said sleeve upraising from the bottom of the tray a sufficient distance to keep the contents of the tray from contact with the flame tube.

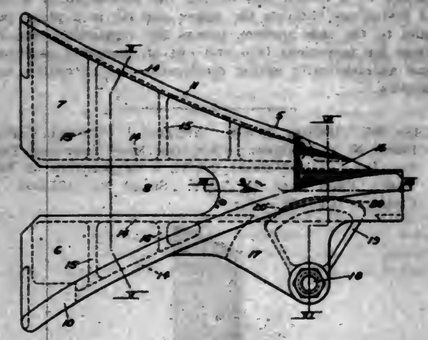
1,488,100. ELEVATOR INCLOSURE. ROGER W. DIEBOLD, Cleveland, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1923. Serial No. 645,839. 4 Claims. (Cl. 20—19.)



1. In combination with an elevator inclosure comprising spaced door frames and doors mounted adjacent said frames and cooperating together to normally close the opening therebetween, and a car spaced from said inclosure and having an opening in one side registering with the opening between said frames, of vertical subjam means interposed between said doors and said car, said means extending substantially across the space between said doors and the outer wall of said car.

1,488,101. TREATMENT OF SKINS. GEORGE DUCKWORTH, Albert Park, Victoria, Australia. Filed Sept. 13, 1922. Serial No. 588,090. 1 Claim. (Cl. 149—2.)

In the treatment of skins a process for the removal and recovery of the fur and hair without impairing the usefulness of the said skins for tanning and the production of leather consisting of first immersing the skins in a weak solution of sulphide of soda (approximately 3%) for the requisite period for the removal of blood and fatty matter (approximately 12 hours) then subjecting the said skins to treatment with a solution of ammonia maintaining the skins therein at a temperature of from 80° to 120° F. for a period of about 12 hours and then subjecting the said skins to a sweating operation for a period of from 12 to 24 hours and finally removing the fur or hair by mechanical means substantially as set forth.



1,488,102. BRAKE SYSTEM. FREDERICK S. DURSEMBERG, Indianapolis, Ind. Filed Nov. 2, 1921. Serial No. 512,316. 41 Claims. (Cl. 188—152.)

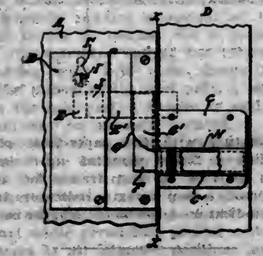
6. In a fluid brake system, the combination of brake cylinder and piston; a master cylinder and piston; connections leading from said master cylinder to said brake cylinder; a master piston actuator; a fluid reservoir;

and means operated by said actuator to force fluid from said reservoir into said master cylinder, connections and brake cylinder.

1,488,103. CAR REPLACER. THOMAS H. EDELBLUTE, Pittsburgh, Pa. Filed Oct. 10, 1923. Serial No. 667,648. 9 Claims. (Cl. 104—270.)

1. A car replacer comprising a plate designed to straddle a rail and having spaced apart inclined wings joined together at their upper ends by a bridge portion, said bridge portion having a convexed rail engaging surface on the under side thereof, said bridge having an inclined face on the under side thereof extending from the convexed surface to the end of the plate, whereby the uppermost end of the plate may rock downwardly onto a rail after a wheel has moved past the convexed surface.

1,488,104. PARTING STRIP FOR WINDOWS. FREDERICK EHRSAM, Reading, Pa. Filed Oct. 14, 1922. Serial No. 594,436. 2 Claims. (Cl. 20—12.)

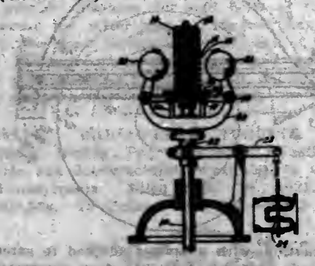


1. In a window construction, a window frame formed with a groove in its jamb, a plate of relatively soft metal forming a closure for the groove and of a width greater than that of the groove, said plate having a projection

thereon which extends into the groove and lies normally against one wall thereof but does not contact with the

base of the groove, a strip of wood rockably mounted on the plate, a window sash, and means for keeping the strip in contact with the sash.

1,488,105. LOCK. MORRIS S. FINKELSTEIN, New York, N. Y. Filed Feb. 28, 1922. Serial No. 539,867. 3 Claims. (Cl. 70—14.)



1. A lock comprising a frame and a plate portion, said frame having a slot and recess therein, a main bolt carried by said frame, a brace bolt slidably mounted on said plate portion adapted to cooperate with said slot and recess and controlled by said main bolt.

1,488,106. INTAKE FOR OIL-WELL PUMPS. JEREMIAH J. FITZPATRICK, Tulsa, Okla., assignor to Eagle Manufacturing Association, organized under a Declaration of Trust. Filed Feb. 5, 1923. Serial No. 617,178. 3 Claims. (Cl. 103—220.)

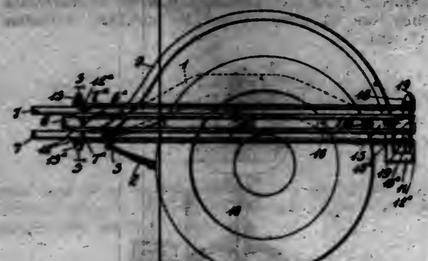
1. An intake for oil well pumps comprising a casing adapted to be arranged on the lower end of a working barrel, said casing being of greater cross-sectional area than the cross-sectional area of said working barrel, the lower end of said casing being provided with an opening of reduced cross-section, an intake pipe adapted to be arranged in said opening, the lower end of said casing being provided with spaced recesses surrounding said opening, and a casing surrounding said intake pipe and secured to the lower end of said first casing whereby communication with the interior of said second casing is permitted through said recesses.

1,488,107. GOVERNOR. WARREN B. FLANDERS, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 24, 1920. Serial No. 426,159. 8 Claims. (Cl. 264—3.)

1. In a governor, the combination of a spindle, a plurality of weights carried by and mounted to swing about axes which are transverse to the axis of the spindle, inwardly-projecting arms carried by the weights, spring means cooperating with the inward-projecting arms to oppose the centrifugal effect of the weights, and an abutment member for the other end of the spring including a helical rib engaged between convolutions of the spring and decreasing in pitch in the direction away from said arms.

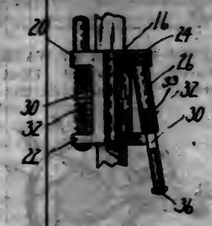
1,488,108. TURBINE DRIVEN BY WATER OR STEAM. OTTO GÄTZI, Zurich, Switzerland. Filed Jan. 16, 1922. Serial No. 529,622. 1 Claim. (Cl. 253—40.)

A turbine comprising a rotor, a casing surrounding the same and spaced radially therefrom, said casing having a lengthwise exhaust slot and being double-walled to form an annular chamber interrupted only by the walls of the exhaust slot, nozzles extending inwardly from the casing tangentially of the rotor for directing fluid pressure thereon, a branched inlet leading into the annular chamber of the casing immediately below the exhaust slot, and a series of pressure-control valves arranged above the slot to open under excessive pressure in the annular casing chamber.



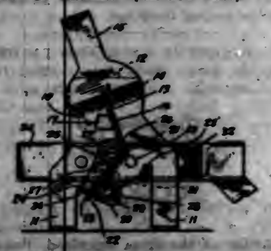
1,488,109. CIGARETTE CASE AND LIGHTER. JOHN GEMEINHARDT, Little Falls, N. J. Filed Dec. 1, 1922. Serial No. 604,362. 5 Claims. (Cl. 131—59.)

1. In a device of the class described, the combination of an inner and an outer casing, said outer casing provided with an opening, a plurality of containers between said casings, each container provided at one side with



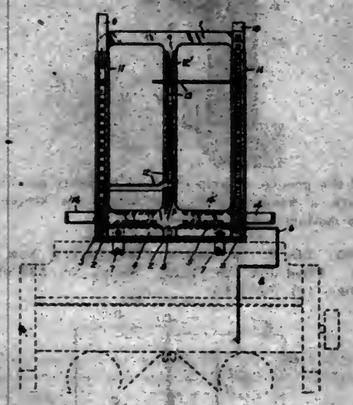
a pair of parallel flanges and upon its other side with a lug, the legs of the containers fitting between the parallel flanges, each container provided with a grip, said grip adapted to be positioned contiguous to said opening in the outer casing for permitting an operator to propel the containers around the inner casing, and means for lifting cigarettes out of the casing from the containers.

1,488,110. SIDE BUMPER FOR AUTOMOBILES. CHRISTIAN GIEL, Kalamazoo, Mich. Filed July 19, 1923. Serial No. 653,523. 14 Claims. (Cl. 293—57.)



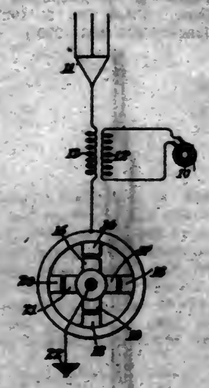
1. The combination, with a bumper adapted to extend across the side of a wheel and fender of an automobile, of means pivotally supporting each end of said bumper, whereby it may be swung about either end to permit access to the fender or wheel.

1,488,111. TENSION WEIGHT FOR BRAID CARRIERS. BARTHOLOMEW J. GOSNEIGHER and ROBERT A. SNEED, Louisville, Ky. Filed Oct. 1, 1923. Serial No. 665,765. 6 Claims. (Cl. 94—15.)



4. A cord braider including in combination a tension frame, a bobbin, a tension weight member slidable on the frame, said tension weight member including readily removable plungers, and a helical spring surrounding each plunger having one end cooperating with the weight member and the other with the plunger, and having its entire length readily accessible.

1,488,112. LEVER MECHANISM. ROBERT A. GOELLER, New York, N. Y., assignor of one-half to Benjamin Gross, New York, N. Y. Filed Dec. 12, 1921. Serial No. 521,650. 12 Claims. (Cl. 200—67.)

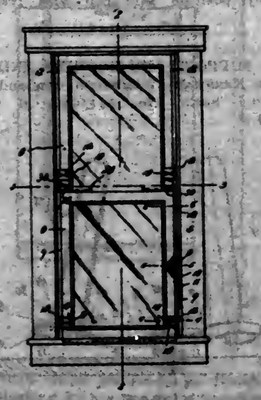


1. In combination, a frame, a member pivoted thereon, toggle means for swinging said member on its pivot, a second member pivoted on said frame on a pivot spaced from the pivot of the first mentioned member and a link pivoted to both of said members, the link pivots and pivot of the first member being substantially alined in their initial positions.

1,488,113. TYPEWRITER DEVICE. ENRIQUE SALAS GONZALES, Santiago, Chile. Filed Apr. 12, 1921. Serial No. 460,825. 11 Claims. (Cl. 197—189.)

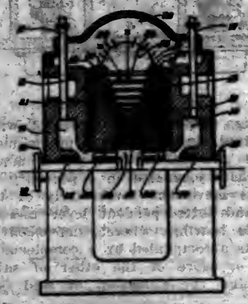
1. In combination with the paper-table of a typewriting machine, a frame mounted upon said paper-table, a scale slidable in said frame for adjustment lengthwise thereof, a top margin indicator and a bottom margin indicator adjustable lengthwise of said scale.

1,488,114. RADIO TELEGRAPHY AND TELEPHONY. JOHN HAYS HAMMOND, JR., Gloucester, Mass. Original application filed Aug. 24, 1912, Serial No. 716,864. Patent No. 1,296,504, dated Mar. 4, 1919. Divided and this application filed Feb. 24, 1919, Serial No. 278,878. Renewed Aug. 25, 1923. 4 Claims. (Cl. 250—17.)



1. In a radio transmission system, the combination with a transmitting circuit arranged to emit high frequency waves, of means for impressing periodic amplitude variations upon said waves by periodically varying an electrical constant of the transmitting circuit in such a manner that the time-intensity curves shall be peaked.

1,488,115. ADJUSTABLE SHOE TREE AND STRETCHER. JOHN S. HANSEN, Brockton, Mass., assignor to O. A. Miller Treeing Machine Company, Brockton, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1922. Serial No. 555,622. 1 Claim. (Cl. 12—128.6.)



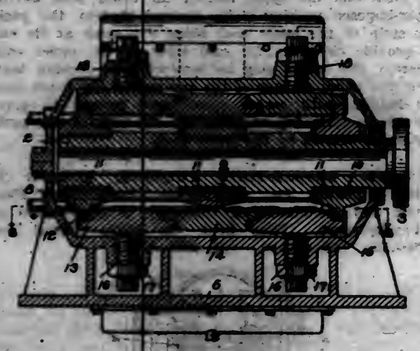
A shoe tree of the kind described comprising a fore part, a heel part, a vertically arranged passage in each of the parts, said passages being in alinement with each other to form practically a single continuous passage, pivot shafts in the fore part and heel part arranged parallel with each other and extending transversely of the passages, a connecting link pivotally mounted at one end to the pivot shaft in the fore part and provided with a slot surrounding the pivot shaft in the heel part whereby relative movement of the heel part with respect to the connecting link is permitted, a rack formed on the rearward end of the connecting link, a pinion meshing with said rack, means for rotatably mounting the pinion in the heel part, a shaft rotatably mounted in the heel part, a handle on said shaft whereby the same may be manually rotated, a worm formed on the lower end of said shaft and meshing with the pinion, means for retaining said shaft in assembled position on the heel part with the form in mesh with the gear wheel whereby rotation of the worm will effect a to and fro movement of the heel part relatively with the fore part while permitting pivotal action of the toe and heel parts at all adjusted positions and will simultaneously and automatically lock the heel and toe parts in adjusted position through the frictional engagement of the worm and rack engaging pinion.

1,488,116. WINDOW CONSTRUCTION. WILLIAM JUDD HEATH and HAROLD D. HEATH, Brooklyn, N. Y. Filed Sept. 14, 1923. Serial No. 662,627. 2 Claims. (Cl. 20—49.)

1. In a window construction, the combination with a frame having vertical guide ways, of a pair of supplemental stiles longitudinally each slidable in one of said guide ways a sash positioned between the supplemental stiles of each pair, said supplemental stiles having longitudinal recesses in the outer sides thereof, leaf springs having outwardly bowed central portions arranged within said recesses, and screws extending through the central portions of said springs and through the supplemental stiles and threaded into the sash stiles for pivotally mounting the sashes for swinging movement upon horizontal axes, the supplemental stiles of each pair being provided with notches in the inner faces thereof near their upper ends, and outwardly projecting pins upon the sash stiles adapted to seat within said notches for limiting the sashes to their proper vertical position relative to the supplemental stiles and for preventing rearward swinging movement of the upper ends of the sashes, the lower rail of the upper sash and the upper rail of the lower sash having super-imposed packing strips secured thereto, the packing strip of the lower sash being cut away at its end to provide clearance for said bolts of the upper sash whereby the latter may be lowered, and locking bolts upon the upper surface of the top rail of the lower sash for holding both sashes closed and formed to cover the spaces formed by cutting out the ends of the packing strips carried by the lower sash.

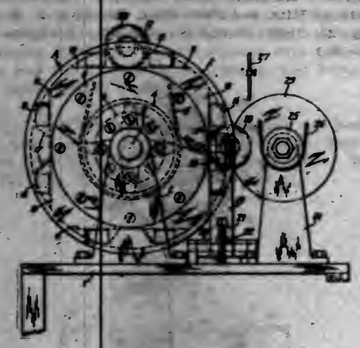
1,488,117. RADIAL-FLOW TURBINE. HERBERT T. HOSS, Merion, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 30, 1921. Serial No. 504,534. 10 Claims. (Cl. 253—16.5.)

1. In an elastic-fluid turbine, the combination of oppositely-rotating rotors having concentric rows of interleaving blades through which elastic fluid flows in a radial direction and a last row of moving blades having discharge edges so shaped as to provide for the discharge of elastic fluid both radially and with bilateral components of direction.



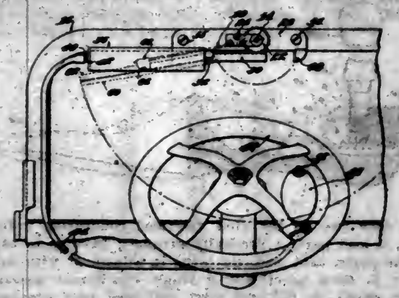
1,488,118. HANDLE FOR SPRING INSTRUMENTS. CHARLES HILL and FRED HILL, Brooklyn, N. Y. Filed Aug. 23, 1923. Serial No. 658,809. 3 Claims. (Cl. 74—33.)

1. A crank handle comprising a spindle, a crank arm freely rotatable on said spindle, a flange rigid on said spindle, a pawl pivoted on said crank arm, a pin ex-



tending from said flange and adapted to engage the pawl lever to cause the crank arm and spindle to rotate in unison, housing on said crank arm having an internal thread at one end, a screw seat engaging said thread, a plunger normally extending from said housing, and means for urging the plunger outwardly.

1,488,119. GEARING. HARRY A. S. HOWARTH, Pittsburgh, Pa. Filed Aug. 4, 1919. Serial No. 315,284. 15 Claims. (Cl. 74—7.)

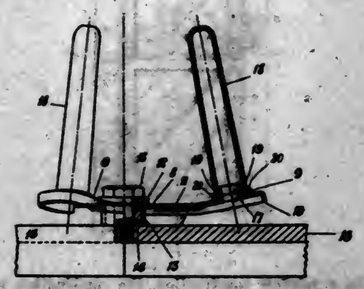


1. In gearing, a gear wheel provided with a shaft journaled in fixed bearings, and a pinion meshing with said gear and provided with a pinion mounting consisting of a shaft journaled in a plurality of bearings having relative movement transversely of the axis of said pinion, and interdependent lever means pivotally supporting said bearings whereby movement of one of said bearings is accompanied by a complementary movement of one or more of the other of said bearings withut disturbing the alinement of said bearings.

1,488,120. MACHINE FOR SKIVE-SPLITTING ANNULAR ARTICLES. CECIL R. HUBBARD, Cleveland, Ohio, assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed June 21, 1923. Serial No. 646,766. 10 Claims. (Cl. 164—61.)

1. A machine for skive splitting annular articles comprising rotatable complementary gripping means for holding an annular article inclined to the plane of rotation, and cutting means in the path of said article and movable in a plane parallel to the plane of rotation.

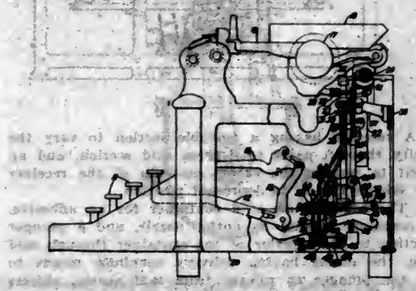
1,488,121. APPARATUS FOR CLEANING WIND-SHIELDS. CHESTER W. JOHNSON, Lexington, Mass., assignor of one-half to Walter A. Hopkins, Brookline, Mass., and one-fourth to Charles E. Tilton, Tilton, N. H. Filed June 16, 1921. Serial No. 478,113. 4 Claims. (Cl. 15—255.)



1. In a cleaner for wind-shields and the like, a fluid pressure operated means, a cleaning mechanism connected thereto, a manually operated pump in open communication with said fluid pressure operated means to induce pressure in said fluid pressure operated means.

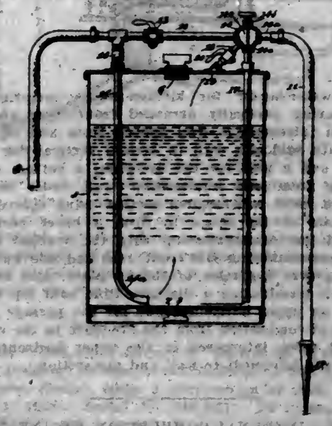
1,488,122. ADJUSTING PLUG FOR MEASURING CHAMBERS. WINFRED H. JURGENS, Cleveland, Ohio, assignor to The H. J. McCue Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1922. Serial No. 597,665. 4 Claims. (Cl. 23—165.)

1. An adjustable measuring plug comprising a body member provided with means adapting the same to be engaged in the wall of a chamber, a tubular cap slidably and snugly fitting over the same, and means adapted to variously position said cap with respect to said member.



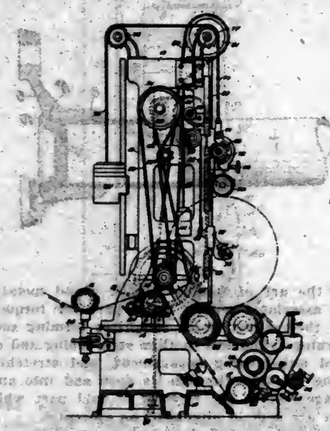
1,488,123. SUPPORT FOR BOBBINS AND THE LIKE. GRINDROD KERSHAW, Whitworth, England. Filed Nov. 18, 1920. Serial No. 424,939. 6 Claims. (Cl. 242—130.)

4. A revolvable support for use in a creel der holding yarn bodies with the beginning of the thread of one connected to the end of the thread of another comprising a basal part of metallic plate having the requisite disposition of its various parts brought about by relative



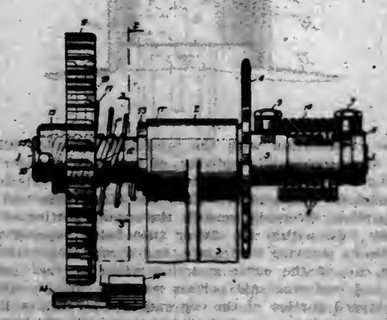
displacement of parts of the metallic plate and having a central orifice and a plurality of arms extending in curved form out of the plane of the central part and in each arm a central depression and integral strengthening flanges around the central orifice and the periphery of the basal part and provided with a plurality of inclined holding devices and coacting means for their attachment.

1,488,124. TYPEWRITING MACHINE. SEYED KHALIL, Newark, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1922. Serial No. 531,350. 19 Claims. (Cl. 197—84.)



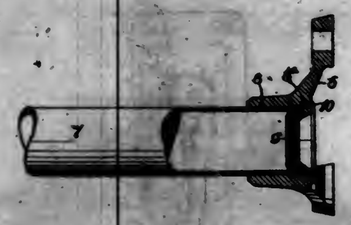
1. In a typewriting machine, in combination, a carriage, escapement mechanism therefor comprising an escapement wheel having a regular step-by-step movement, and a gear-shift connection between the escapement wheel and the carriage to enable the movement of the carriage relative to the escapement wheel to be varied, character keys, and means actuable by said keys for selectively controlling the gear-shift connection in accordance with the keys depressed.

1,488,125. SPRAYER. ALVIN H. KLINE, Cedar Rapids, Iowa. Filed Jan. 22, 1923. Serial No. 614,000. 3 Claims. (Cl. 299—84.)



1. In a sprayer, a closed receptacle for liquid, a main air-pipe communicating with a source of compressed air, a cock therein, a pipe depending into the liquid from the main pipe back of the cock, a liquid supply pipe extending from near the bottom of the receptacle to the main pipe forward of said cock, a valve therefor, and a diagonal pipe provided with a regulating cock extending from near the outlet of said supply pipe to an outlet in the upper part of the receptacle.

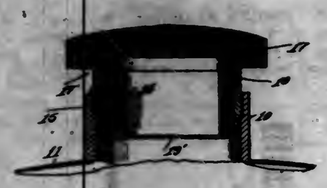
1,488,126. PAPER SLITTER AND WINDER. SAMUEL M. LANGSTON, Wenonah, and KARL SIEG, Brooklawn, N. J., assignors to Samuel M. Langston Company, Camden, N. J., a Corporation of New Jersey. Filed June 9, 1921. Serial No. 476,366. 18 Claims. (Cl. 242—66.)



1. Winding mechanism, including rack bars, a riding or pressure roller movable vertically as the roll of material being wound increases in size, a shaft parallel to and movable with said pressure roller, pinions on said shaft adjacent to opposite ends thereof and meshing with said rack bars to prevent relative vertical movement of the opposite ends of said roller and adjustable means for varying the resistance to rotation of said shaft.

1,488,127. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,778. 6 Claims. (Cl. 74—7.)

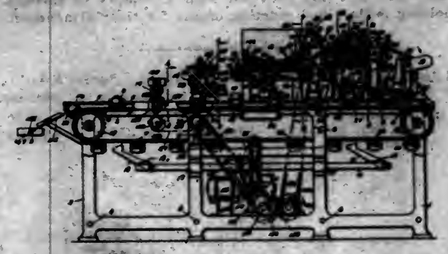
1. In a device of the class described, the combination of a rotatable shaft having a single bearing which takes all torque and pressure loads, a gear mounted on said shaft at a point adjacent one end of said bearing and arranged to apply a rotative power to one end portion of said shaft, a driving member mounted on the other end portion of the shaft for longitudinal movement thereon and rotary movement therewith and adapted to cooperate with a part of the engine to be started, said shaft and driving member having engaging means at a point adjacent the other end of such a bearing and coacting at the end of the inward longitudinal movement of the driving member towards said bearing.



1,488,128. JUNCTION OF METAL PARTS AND THE ART OF JOINING SUCH PARTS. HARRY P. MACDONALD, Montclair, N. J., assignor to The Snead & Co. Iron Works, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 30, 1919. Serial No. 273,974. 14 Claims. (Cl. 29—148.)

1. In the art of joining unsplit round metal tubing into an associated hollow metal part for torque transmission, the method which comprises forming such part with opening cylindrical to align such tubing and recessed to afford anti-turning engagement, and stretching and expanding the tube through its open end into anti-turning engagement in the recesses of said part while tube and part are kept in alignment as aforesaid.

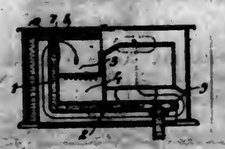
6. A torque transmission device comprising a hollow metal part with round bore enlarged to non-circular cross section at one end, and an unsplit metal tube aligned in said bore with its end expanded into anti-turning engagement in the enlarged opening.



1,488,129. RADIATOR CAP. CLARENCE C. NELLIS, Cold Brook, N. Y. Filed Dec. 4, 1922. Serial No. 604,823. 1 Claim. (Cl. 220—24.)

The combination with the internally threaded filling tube of an automobile radiator, of a closure therefor including a tube having its intermediate portion exteriorly threaded for engagement within the filling tube and its end portions externally smooth, the smooth portion of the closure tube within the filling tube being tapered and terminally carrying a strainer, and a cap hinged to the inner end of the outer smooth portion of the closure tube and enclosing said portion when in closed position, said hinged portion of the cap and tube serving to limit the inward movement of the tube within the filling tube.

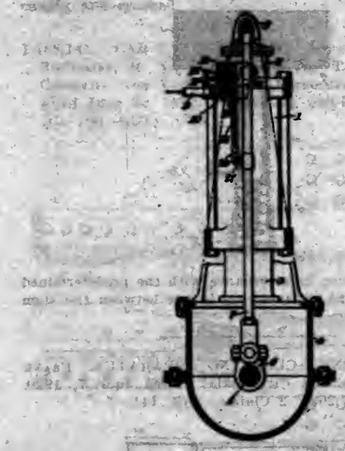
1,488,130. MACHINE FOR MAKING CAKES OR WAFERS OF TOILET POWDER. LUIGI D'ONOFRIO, New York, N. Y., assignor of one-third to Carlo Dalboni and one-third to Antonio Nocito, both of New York, N. Y. Filed July 13, 1922. Serial No. 574,718. 19 Claims. (Cl. 25—100.)



1. A machine for working comminuted or pulverized material into the form of cakes or wafers, comprising parts for supplying and admeasuring a predetermined quantity of such material to a base, and parts for pressing the material into adhesion with the base through the action of an adhesive agent which secures the material and base together, said parts comprising members for rotatably engaging the material and molding it into shape on said base.

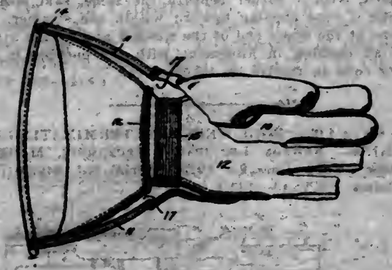
7. A receiver having a movable section to vary the capacity thereof, parts to depress said section, and an element to remove the excess contents of the receiver while said section is in depressed position.

14. The combination of a container for an adhesive, said container having an outlet nozzle, and a plunger projecting to the exterior of the container through said nozzle, the nozzle having delivery openings, means to move the plunger to release from said nozzle, objects supplied with adhesive by said container.



1,488,131. WATER HEATER FOR KITCHEN RANGES. PER OLOF PETTERSON, Malmo, Sweden. Filed Apr. 16, 1921. Serial No. 461,937. 5 Claims. (Cl. 126—5.)

1. A water-heater for kitchen-ranges comprising, a boiler having vertically arranged front, rear and side walls, an intermediate wall spaced from and in parallelism with said side wall to form a vertical flue therebetween and a wall for the fire-place, a bottom section extending from said intermediate wall under the fire-place and oven, said bottom section being spaced from the bottom of the range to form a lower horizontal flue, said flue communicating with the vertical flue, a top section connecting said front, rear and side walls and extending over a portion of the fire-place, said intermediate wall terminating a distance from said top section to form an upper horizontal flue for the passage of the products of combustion from the fire-place to the vertical flue, and tubes interposed in the upper horizontal flue between the intermediate wall and top section.

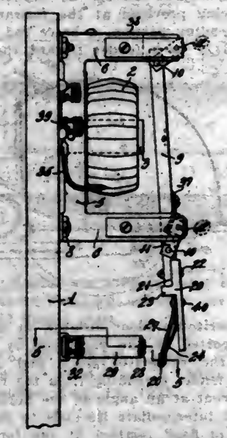


1,488,132. INTERNAL-COMBUSTION ENGINE. THEODORE PRATT, Glen Cove, N. Y. Filed Jan. 10, 1921. Serial No. 436,033. 3 Claims. (Cl. 123—81.)

1. The combination with the cylinder of an internal combustion engine, of a fuel intake pipe, a passage through the wall of the cylinder whereby the fuel may pass from the intake to the explosion chamber of the cylinder, an oscillating fuel controlling valve interposed between the intake pipe and said passage, a crank arm on the valve, a lever fulcrumed to a fixed part of the apparatus, a link connecting the crank arm with one end of the lever, and a link connecting the other end of the lever

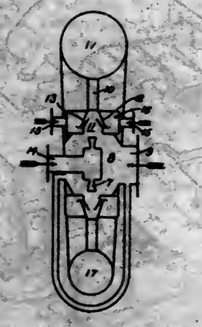
to a moving part of the apparatus, whereby the valve is opened twice during each cycle of movement of said moving part.

1,488,133. GLOVE OR MITTEN STRUCTURE. BENJAMIN J. RICKER, Grinnell, Iowa. Filed Apr. 12, 1923. Serial No. 631,629. 2 Claims. (Cl. 2—164.)



1. A device of the class described, comprising an outer element, having a hand portion and a wrist covering portion, a lining for said outer element secured to the outer element but free from securing connection with the outer element at its wrist portion, said lining having an elastic element for causing it to snugly draw around the wrist of the wearer.

1,488,134. RELAY. LOUIS E. RICHMOND, Cleveland, Ohio, assignor, by mesne assignments, to The Autocall Company, Shelby, Ohio, a Corporation of Ohio. Filed June 1, 1920. Serial No. 385,677. 12 Claims. (Cl. 200—87.)

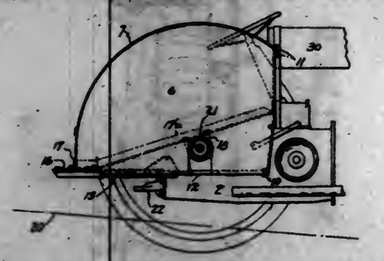


1. In a relay, the combination of relatively stationary contacts, an electromagnet, and a contact carrying armature member lying approximately normal to the axis of said electromagnet and mounted to swing at two points so as to be bodily movable at both points to carry its contacts into and out of operative engagement with said stationary contacts.

12. In a relay, the combination of relatively stationary contacts, a vertically disposed U-shaped frame, an electromagnet in said frame, an armature member having swinging connection with the arms of said frame and adapted to swing in a vertical plane into and out of

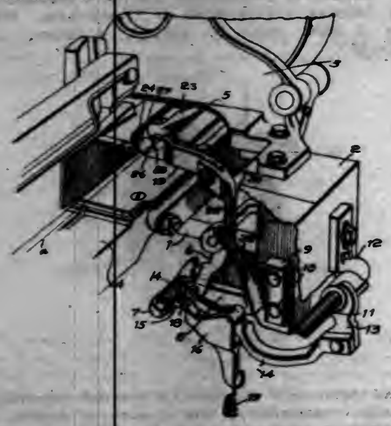
engagement with said contacts, and frictional means effective upon said armature to retard its motion toward and away from said electromagnet.

1,488,135. EJECTOR. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1920. Serial No. 421,997. 4 Claims. (Cl. 230—13.)



1. An apparatus of the character described comprising, a chamber communicating with a source of medium to be compressed, stationary means for delivering a disc-shaped jet of expansive impelling fluid through a portion of the chamber, stationary means for effecting a compression of the combined media and fluid issuing from said chamber, and adjustable means including streamline guide vanes for guiding the media and fluid through said compression means.

1,488,136. FENDER AND SAFEGUARD FOR TRACTORS. HOWARD W. SIMPSON, Dearborn, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 7, 1921, Serial No. 513,286. Renewed Aug. 18, 1923. 3 Claims. (Cl. 280—152.)



2. A fender or safe guard for automotive vehicles comprising the combination with the two driving wheels thereof, the driving axle and housing therefor extending between the wheels, of a fender for each wheel consisting

of a sheet metal plate covering the inner side of each wheel from about the line of the axle upward and having an outwardly turned flange member at the top extending over the periphery of each of the respective wheels, said plate also being provided at the forward end with an inwardly extending portion, a brace rod extending from the rear end of each fender toward the center of the

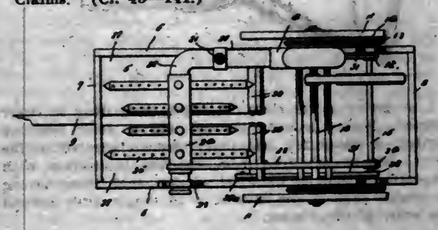
machine, a horizontal floor member on each side of the machine supported by the plate and by the said brace member on the respective sides, and a second brace rod for each fender extending from the rear end thereof toward the front at an angle to the horizontal, said bar being secured intermediate its ends to the axle housing and secured in fixed relation at the forward end with the tractor structure.

1,488,137. FILLING-REPLENISHING LOOM. ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 31, 1923. Serial No. 629,122. 5 Claims. (Cl. 139—231.)

1. In a filling replenishing loom, the combination of the lay and shuttle boxes, a shuttle feeler having a weft or filling displacing end formed by two inclined surfaces of unequal length which provide a weft or filling seat at their intersection which is above the longitudinal axis of the shuttle when the feeler is moved to shuttle-feeling position, that the weft or filling thread may be displaced to a position away from the engaging portions of the shuttle feeler and shuttle and not be cut when the shuttle feeler moves to feeling position and encounters and the end portion of an improperly boxed shuttle.

1,488,138. CONFECTION MOLD. JAMES WARNER, Ogden, Utah. Filed June 20, 1922. Serial No. 569,597. 1 Claim. (Cl. 107—1.)

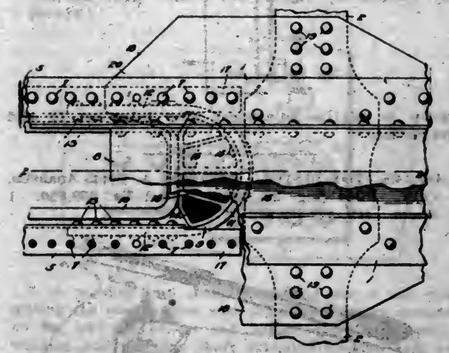
The combination of a mold box and handle having adjustable locking means thereon, a tray in the box, a stem in the handle connected with the tray, adjustable locking means on the stem co-acting with the locking means on the handle, a spring between the end of the handle and the stem, and means for adjustably setting



the spring pressure in accordance with the predetermined one of the locking engagements in use between the stem and the handle.

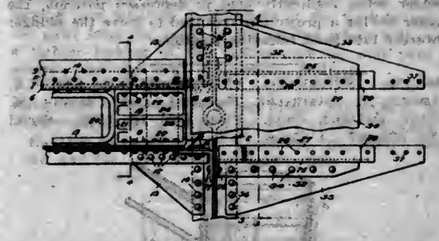
1,488,139. UTENSIL-CLEANING APPARATUS. FRANK WERNER, Oklahoma City, Okla. Filed June 7, 1920. Serial No. 387,209. 2 Claims. (Cl. 141—7.)

1. A device of the character stated, comprising a washing trough and a support therefor, burners disposed beneath the same, a steamer supported at one end of said support, with a burner beneath the same, said steamer having a cone opening upward within the steamer, and a cone at the upper end of the steamer and having a tube and an opening in alinement with the opening in the lower cone to receive an inverted can.



1,488,140. BOLL-WEEVIL-EXTERMINATING MACHINE. NEWTON LEONIDAS ABERCROMBIE, Meridian, Miss. Filed June 22, 1923. Serial No. 646,991. 3 Claims. (Cl. 43—141.)

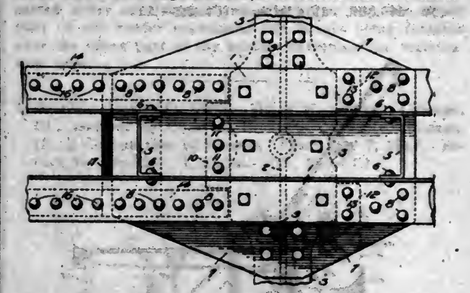
1. A machine of the class described including a wheel supported frame, a pipe mounted transversely at the forward end of the said frame, a drum rotatable on said pipe having a plurality of perforated tubes extending radially therefrom, the inner ends communicating with the interior of the pipe, a blower mounted on said frame having the outlet connected with the pipe for supplying air thereto, driving connections between the wheels of the frame and the blower for operating said blower, and insect catching platforms mounted below the drums and radial tubes having means for destroying the insects caught thereon, and a driving connection between the drum and the wheels of said frame for rotating the drum in the movement of the frame over the ground, whereby the blower will force jets of air outwardly through said perforated pipes on said drum in the forward movement



of the frame over the ground and in the rotating movement of said drum for blowing insects from all parts of plants passing under said frame which are subsequently caught and crushed.

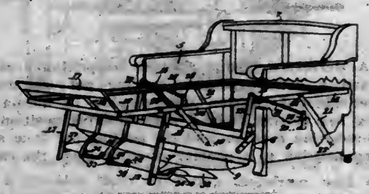
1,488,141. CAR UNDERFRAME. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed June 20, 1922. Serial No. 569,706. 25 Claims. (Cl. 105—420.)

1. In a car underframe, the combination with center sills and bolster, of center sill reinforcing means connected to said center sills, draft sills arranged beneath the center sills and reinforcing means, means connecting said center sill reinforcing means and draft sills and a backstop member provided at the inner ends of said draft sills and spaced from said bolster.



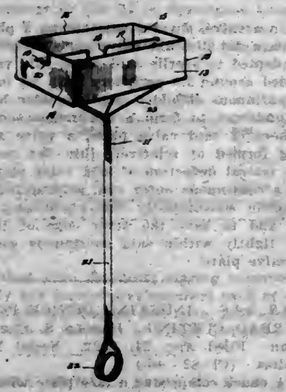
1,488,142. CAR UNDERFRAME. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1922. Serial No. 579,221. 19 Claims. (Cl. 105—414.)

16. In a car underframe, the combination with center sills and bolster, of center sill reinforcing members connected to said center sills, draft sills arranged beneath the center sills and reinforcing members, means connecting the inner ends of said draft sills to the bolster, a back stop adapted to be engaged by a movable element of the draft rigging, a tie plate connecting the draft sills and arranged intermediate the ends of the back stop, and gusset plates connected to said tie plate, draft sills, and bolster, said gusset plates extending forwardly substantially the length of said back stop.



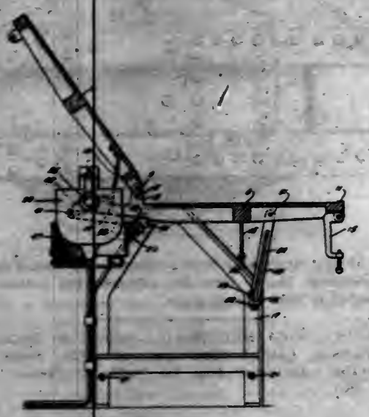
1,488,143. CAR UNDERFRAME. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1922. Serial No. 579,223. 16 Claims. (Cl. 105—414.)

1. In a car underframe, the combination with center sills and bolster, of center sill reinforcing members adapted to be connected to the center sills, draft sills connected to and arranged beneath the center sill reinforcing members, a gusset plate interposed between the center sill reinforcing members, the bolster and the inner



ends of said draft sills, and strengthening means involving abutment blocks arranged adjacent the bolster and connected to said gusset plate.

1,488,144. SOFA BEDSTEAD. JOSEPH D. BELL, San Francisco, Calif. Filed Dec. 8, 1920, Serial No. 429,198. Renewed Aug. 16, 1923. 3 Claims. (Cl. 5—48.)



2. In a sofa bedstead, the combination of a housing, an invertible seat, a mattress frame including a front and a rear section, swinging links supporting the front section from the seat and the rear section from the housing, and guides at each side of the mattress frame upon which the frame sections intermediate said links are slidable for guiding the front frame to a concealed position beneath the seat and the rear frame section to an upright position at the rear of the seat.

1,488,145. INSECT-EXTERMINATING DEVICE. MAUD BELLOWS, Spirit Lake, Iowa. Filed Apr. 18, 1923. Serial No. 632,939. 3 Claims. (Cl. 43—136.)

1. An insect exterminator comprising a box member open at one end and adapted to receive flypaper in its bottom, and means for retaining the flypaper in position, said means including a lever hinged in one of the walls of said box member and engaging in an L-shaped slot provided in the opposite wall of said box member.

1,488,146. STEREOTYPE-CASTING MACHINE. RAY A. BROWN, Rockford, Ill. Filed Aug. 31, 1923. Serial No. 660,306. 12 Claims. (Cl. 22—2.)

1. A stereotype casting machine comprising a casting box and a bottom pouring melting pot mounted in counter-balanced relation for swinging in unison, the casting box moving from a work-receiving position to a metal-receiving position, and the melting pot from a low heating position to a pouring position above the casting box.

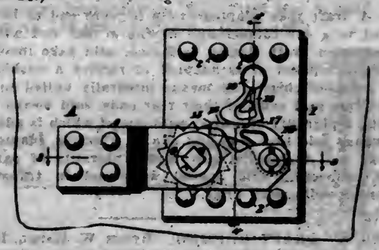
1,488,147. VALVE. GEORGE J. BRYEN and RAYMOND H. CURRIE, Duquesne, Pa. Filed Dec. 1, 1921. Serial No. 519,221. 2 Claims. (Cl. 251—144.)

1. In a valve, a valve seat having a plurality of ports therein, a flat disk-like valve plate mounted on said seat and adapted to overlie said ports, said valve plate being provided around its periphery with an integral upstanding continuous shoulder, said shoulder having its inner face undercut to form a continuous socket around the periphery of said valve plate, a valve actuating coiled spring formed of relatively thin flat metal adapted to resist lateral deflection of said valve plate and provided with a continuous outer rim, said spring being adapted to overlie substantially the whole area of said valve plate and to have the outer edge of the rim portion fitted tightly within said continuous socket formed on said valve plate.

1,488,148. INDEXING DEVICE FOR MULTIPLE-THREAD CUTTING. HAROLD S. CARLSON, Danbury, Conn. Filed Apr. 24, 1922. Serial No. 556,230. 2 Claims. (Cl. 82—40.)

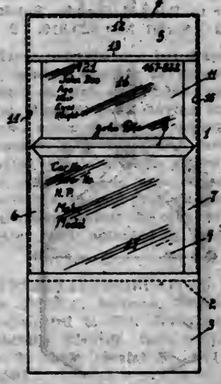
1. A chuck comprising a face plate with radial grooves for securing the work thereon, a back plate having a forwardly directed hub with a bore adapted for attachment on a revolvable spindle, said plates being cylindrical and provided the one with an index and the other with a circumferential graduation, the exterior surface of said hub being provided with cylindrical steps and said face plate having corresponding steps so as to be mounted upon said hub, and means for clamping the plates together in relative adjustment after being set to said graduation.

1,488,149. TOY PISTOL. BENJAMIN A. COLE, Anaheim, Calif. Filed Aug. 28, 1923. Serial No. 659,820. 1 Claim. (Cl. 124—2.)



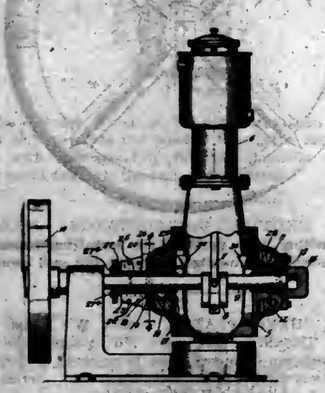
A toy pistol including a grip, a lock, and a barrel, the barrel having a longitudinal rib on its upper face, a rubber band retaining pin on the upper face of the lock portion, the other end of the said rib being arranged to retain the other end of the loop of the rubber band, a trigger, and a plunger slidable vertically through the upper face of the lock of the pistol forwardly of the said pin in position to lift the rubber band from the pin, said plunger being resiliently held in depressed position, the trigger having a projection arranged to move the plunger upwardly into band releasing position.

1,488,150. STEAMING AND DRAINING KETTLE. LESTER L. GARIBALDI, Hayward, and FRANCIS M. CARY, Oakland, Calif. Filed Feb. 15, 1922. Serial No. 536,667. 1 Claim. (Cl. 53—1.)



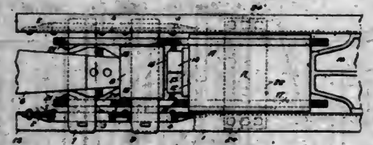
A kettle of the character disclosed including an outer receptacle, an inner receptacle, an annular internal flange formed in the upper part of said outer receptacle at a substantial distance below its top, said flange being provided with a plurality of notches, the lower part of said inner receptacle being provided with perforations, the upper part of said inner receptacle being slightly larger than the lower body portion thereof to form a shoulder to rest on the upper edge of said outer receptacle to support the bottom of the inner receptacle a short distance above the bottom of the outer receptacle, vertical external integral ribs on said inner receptacle extending from said shoulder to the perforations in the bottom of said inner receptacle, said ribs fitting in said notches when the inner receptacle is in its lower position in said outer receptacle and adapted to fit closely against the inner sides of the outer receptacle, said inner receptacle being adapted to be elevated until said ribs are withdrawn from said notches and turned until the lower end of said ribs rest on said flange and support the inner receptacle in the upper part of the outer receptacle, and an outwardly extending handle attached to each receptacle near its top.

1,488,151. WINDING AND DUMPING RATCHET. JOHN F. HAGEMAN, Anyox, British Columbia, Canada. Filed Feb. 20, 1922. Serial No. 538,047. 2 Claims. (Cl. 74—16.)



1. A winding and dumping ratchet for a car comprising the combination with supporting plates mounted on the side of the car and having spaced portions, a winding and dumping shaft extended through said car side and having its squared portion extended through the outer supporting plate, a ratchet mounted on said squared portion of the shaft between said plates, a pawl supporting member extended through said plate, a pawl mounted on said pawl supporting member and having a curved body portion provided with an inclined upper face, said pawl terminating in an inclined working end for engagement with the ratchet wheel and a locking cam pivoted on said car above said pawl and between the shaft and the pawl supporting member, said locking cam having a weighted and curved lower working edge adapted for gradual locking engagement with the inclined upper face of the pawl at a point offset from and upwardly on the inclined face of the pawl from the pivot point of said locking cam, whereby a movement of the working end of the pawl from the teeth of the ratchet wheel will cause a tighter locking of the locking cam on said pawl to securely lock the pawl in operative position.

1,488,152. HOLDER FOR DRIVERS' LICENSES AND AUTOMOBILE REGISTRATION CARDS. WALTER C. HARLEY, Oakland, Calif. Filed Feb. 15, 1921. Serial No. 445,238. 3 Claims. (Cl. 150—39.)

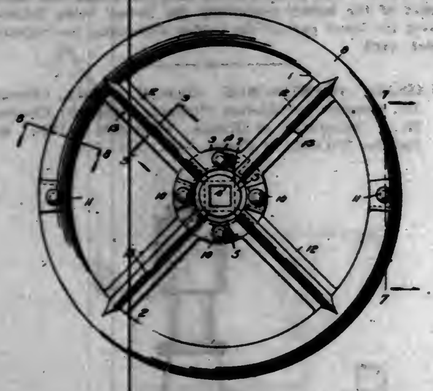


1. A holder for an automobile registration card and a driver's license, including a sheet formed with side flanges, a lower flap and an upper flap, said flaps being folded over said flanges, a sheet of mica being inserted under said flanges and said lower flap, a sheet of mica being inserted under said flanges and said upper flap, the upper part of the holder containing the license being foldable over the lower part of the holder containing the registration card.

1,488,153. PACKING BOX. OMAR H. JEWELL, Chicago, Ill., assignor to Chlorine Products Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1919. Serial No. 309,096. 1 Claim. (Cl. 286—7.)

In a machine having a casing presenting a chamber and a movable shaft extending therefrom, said casing being provided with a ring surrounding said shaft, packing means operating to cut off communication with said chamber around said shaft formed of packing surrounding said shaft and abutting the outer surface of said ring and a packing box formed of sections arranged about the shaft with the joints between said sections extending lengthwise of said shaft, said packing being located in the space provided by said packing box, and the sections of said packing box being connected at one end of the latter to the wall of said chamber, and means for forcing said packing against said ring.

1,488,154. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed July 24, 1920. Serial No. 398,729. 3 Claims. (Cl. 213—66.)

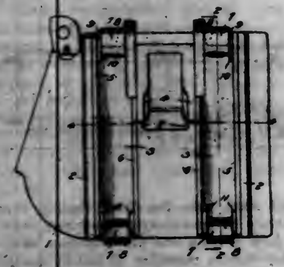


3. A forged steel yoke for draft rigging comprising a pair of relatively flat counterpart members each of which comprises a loop portion and an extension, said extension being provided with a plurality of alined elongated slots.

1,488,155. BRAKE WHEEL. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed May 8, 1922. Serial No. 558,238. 18 Claims. (Cl. 74—33.)

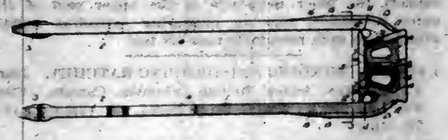
1. The combination with a brake shaft hub member, of a hand brake wheel formed of pressed complementary

metal sections, each having an outer rim portion forming a hand grip and an inner hub attaching portion, spoke



members uniting said portions of each complementary section, and rivet means rigidly connecting said sections.

1,488,156. CHEEK PLATE. BYERS W. KADEL and PERCY R. DREENING, Baltimore, Md., assignors to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed May 11, 1922. Serial No. 560,175. 7 Claims. (Cl. 213—54.)

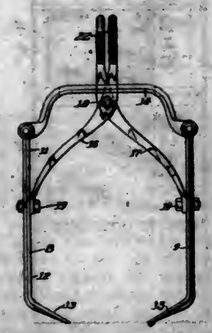


1. A cheek plate formed of a body web portion of varying cross sectional area gradually increased from the ends of the cheek plate to an intermediate point and having a plurality of key receiving slots, the inner adjacent portions of said slots intersecting the greater cross sectional area of the body web.

1,488,157. JOURNAL BOX. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed June 29, 1922. Serial No. 571,705. 20 Claims. (Cl. 105—225.)

1. The combination with a journal box for pedestal trucks, and a wear plate or liner detachably connected thereto, said wear plate being provided with an intermediate wearing surface, offset portions provided adjacent each end of said wearing surface, and means formed on said offset portions and spaced from said wearing surface for detachably connecting said wear plate to the journal box.

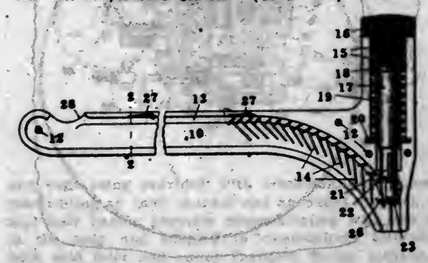
1,488,158. DRAFT YOKE. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1922. Serial No. 579,265. 7 Claims. (Cl. 213—67.)



1. A draft yoke adapted at its forward end to be connected to a car coupler and having a rear end adapted to engage a draft rigging back-stop, said yake involving a pair of spaced arms adapted to receive a cushioning unit between them, and means integrally united to and connecting said arms at their rear ends, said means comprising a plurality of spaced webs one of which is adapted to engage said back-stop and one of which is adapted to engage said cushioning unit, and a plurality of parallel webs connecting said spaced webs and in transverse alinement with said arms.

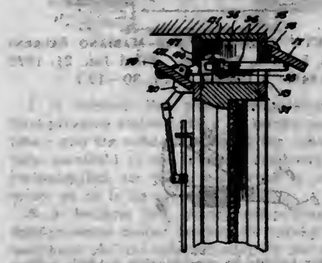
1,488,159. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 2, 1922. Serial No. 585,947. 1 Claim. (Cl. 213—26.)

In a draft rigging, the combination with a coupler, of a rectangular casing or yoke member cooperating therewith, said casing having portions of its side walls removed intermediate the ends thereof, other and corresponding portions of each of said side walls being arranged at an angle to the longitudinal axis of said casing, friction elements and a spring within said casing, some of said elements coacting with the angular portion of said side walls, and a follower extending transversely through said casing, and means extending through the side walls of said casing adjacent the ends thereof for operatively connecting said coupler and casing.



1,488,160. GRAPPLE. JOHN DOYLE KERWIN, Beloit, Wis., assignor to Edward Kerwin, Beloit, Wis. Filed Jan. 17, 1922. Serial No. 529,819. 2 Claims. (Cl. 294—106.)

1. A grapple of the character described, comprising a pair of jaws shaped to provide a shank and a gripping end, a jaw-spacer member to each end of which a jaw



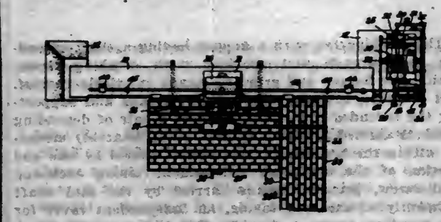
shank is pivotally attached, the jaws being adapted to swing toward and from each other, said member having an opening centrally intermediate its ends, and handle-lifting means in the form of a pair of cross levers pivotally connected together at their intersection and each, pivotally connected at its lower end to one of the jaws intermediate the ends of the latter, the cross levers passing through said opening in said member, and each lever being shaped at its upper end to provide a handle.

1,488,161. MAGAZINE TACK HAMMER. CYRUS T. MCCORMICK, Fredericktown, Mo. Filed May 4, 1922. Serial No. 558,438. 3 Claims. (Cl. 1—45.)

3. In a device of the class described, the combination with a hammer head, of a handle fixed with relation to said head and forming a tack magazine, an impact actuated plunger provided with an offset movable relative to said head to seat the tacks, a pair of pivotal detents for holding and releasing the tack, and an inclined guide adjacent to said offset for delivering the tack to said detents.

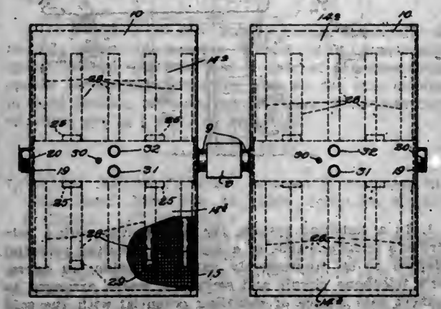
1,488,162. VENTILATOR. GEORGE HENRY MILLER, Lowell, Mass. Filed Nov. 26, 1921. Serial No. 517,849. 3 Claims. (Cl. 98—31.)

2. A ventilator comprising a box-shaped frame having a transverse passage opening at opposite sides of the frame, a shutter on each side of the frame covering said openings, said shutters each having hinged connection with said frame along diagonally opposite edges of said openings respectively, a two-armed lever fulcrumed in said frame with its axis at right angles to said opposite edges of the openings, one arm of said lever having hinged connection with said first shutter, the other arm of the lever abutting against the other of said shutters to swing the latter when actuated by said first shutter.



1,488,163. INTERNAL-COMBUSTION ENGINE. HORACE JAMES POCOCK, Kilburn, London, England, assignor of one-third to Eric Hamilton Rose and one-third to Achille Rivarde, both of London, England. Filed Mar. 8, 1922. Serial No. 541,984. 3 Claims. (Cl. 123—80).

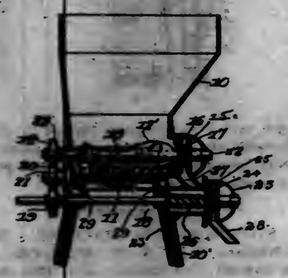
1. In an internal combustion engine, an engine cylinder having inlet and exhaust ports, an engine driven rotatable sleeve within said cylinder having a controlling port adapted to register successively with the said inlet and exhaust ports, and a trunk piston having a pair of longitudinal ports one corresponding in position to the said inlet port and the other to the said exhaust port



of the cylinder, which piston ports expand in width from both ends towards the middle, the piston being provided also with corresponding internal channels opening the said ports through the end of the piston.

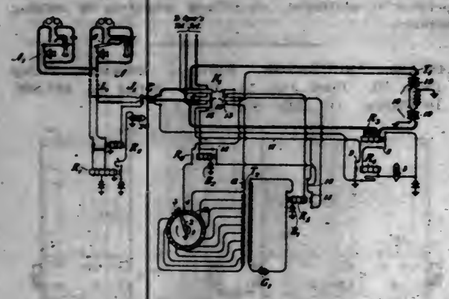
1,488,164. STONEWORKING MACHINE. EDSON T. POLLARD, Niagara Falls, N. Y. Filed Feb. 12, 1921. Serial No. 444,401. 14 Claims. (Cl. 125—14.)

1. A stone working machine comprising, in combination, a T-shaped grooved platen comprising longitudinal and transverse portions, a longitudinally disposed beam, a carriage mounted to travel on said beam above said platen, means for moving said carriage on said beam, means, disposed adjacent one end of said beam and also adjacent the transverse portion of said platen, for controlling the movements of said carriage, a rotating cutting wheel carried by said carriage, and means for causing said cutting wheel to rotate in a clockwise direction and to travel towards said controlling means, where the operator is stationed, when said wheel is in cutting operation.



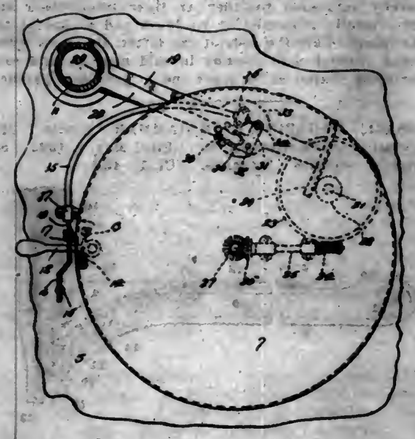
1,488,165. INCUBATOR. JOHN G. POORMAN, Tinley Park, Ill. Filed July 11, 1921. Serial No. 483,869. 10 Claims. (Cl. 119—40.)

1. In an incubator, the combination of a plurality of chambers to be heated, a drum located between said chambers and provided with series of outlets in opposite walls thereof opening into said chambers, respectively,



partitioning means in said drum dividing it into compartments into which said series of outlets open respectively, said partitioning means including a pipe out of communication with said drum, and means for heating said pipe to heat the air in said drum.

1,488,166. FEED-GRINDING MILL. OTTO H. POTTRATZ, New Albin, Iowa. Filed Sept. 9, 1921. Serial No. 499,373. 1 Claim. (Cl. 83—8.)



The combination with a hopper having a shaft extending therethrough and provided with crushing means within the hopper and grinding means exteriorly thereof, and a casing enclosing the grinding means and supporting the extended end of the shaft, of a pair of depending brackets carried by the hopper, a shaft rotatably mounted within the brackets, a feed screw carried by one end portion of the shaft, an independent casing enclosing said screw, grinding means carried by the said shaft outwardly of the said casing, an independent cover for the grinding means, a chute leading from the said cover, and a second chute extending from the first mentioned casing to the feed screw casing.

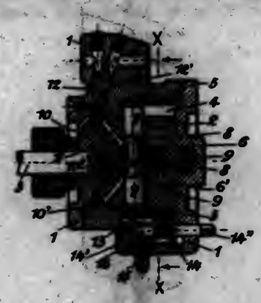
1,488,167. SIGNALING SYSTEM. ROGER G. RAMSDELL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,176. 9 Claims. (Cl. 179—84.)

1. In a signaling system, the combination with a subscriber's telephone line, of a source of signaling potential adapted to be progressively varied in value, an operator's telephone circuit and switching means arranged to connect said source of signaling potential with the said telephone line when the said potential is at its minimum value and only after said telephone line has been supervised by the connection of the said operator's circuit therewith.

1,488,168. AUTOMATIC BRAKE. RAYMOND L. RUOFF, Prescott, Ariz. Filed Oct. 23, 1923. Serial No. 670,301. 4 Claims. (Cl. 192—118.)

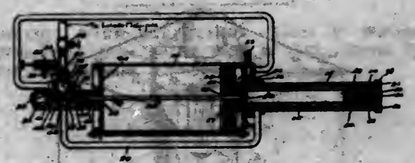
1. In an automatic turn table brake for phonographs, an arm adapted to be mounted to rotate relative to and upon the tone arm of the phonograph, a second arm having one end adapted for attachment to said tone arm to be caused to move therewith, means to cause travelling movement of the first named arm in unison with the tone arm and the second named arm and to cause movement of the first named arm past the stopping point of the tone arm at the completion of the playing of the record, and means operable upon such continued movement of the first named arm for arresting movement of the turn table.

1,488,169. SAFETY RAZOR. PIERO MARIANO SALERNI, Sydenham Hill, London, England. Filed Jan. 21, 1922. Serial No. 530,848. 2 Claims. (Cl. 30—12.)



1. A safety razor having in combination a blade holder, said holder comprising a guard member and an overhanging flange member, a blade adapted to be held between said members, said overhanging flange member being slotted to increase its flexibility and forming a blade engaging finger, said finger being narrower at its forward portion than at its ends, a handle detachably connected to said guard member and engaging said blade for adjustably maintaining the latter in operative position.

1,488,170. ROTARY PUMP. CHARLES SANDOZ, Milan, Italy, assignor to Ditta Fratelli Borletti, Milan, Italy. Filed Nov. 16, 1921. Serial No. 515,467. 2 Claims. (Cl. 103—120.)

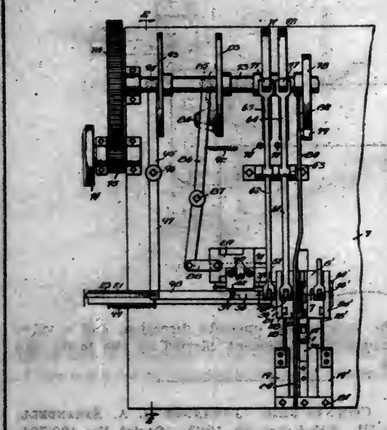


1. A rotary pump, comprising, in combination, a cage, a casing disposed in said cage and having a cylindrical opening, a cylindrical body mounted for rotation in said casing with its axis of rotation in eccentric relation to the axis of said opening, a shaft for rotating said body, the body being provided with at least one diametrically extending bore, a sleeve disposed centrally of said bore,

a rod guided in said sleeve and carrying at its opposite ends a pair of piston heads reciprocable in said bore and having their outer ends in contact with the wall of said casing, whereby a reciprocating motion is imparted to the pistons at each revolution of the body, said casing

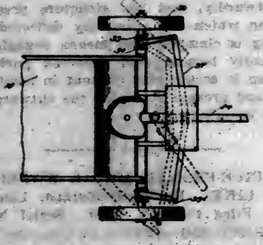
and cage being provided with communicating passages constituting an inlet channel and an outlet channel, and said body having passages communicating with the bore in the body and adapted to communicate alternately with said inlet and outlet channels during rotation of the cylindrical body.

1,488,171. VACUUM PUMP. ALBERT C. SAVIDGE, Indianapolis, Ind. Filed Aug. 1, 1918. Serial No. 247,768. 10 Claims. (Cl. 230—27.)



1. A vacuum tire pump, comprising a reciprocating fluid-pressure motor having its intake connected to atmosphere and its exhaust adapted for connection to the intake manifold of an internal combustion engine, and a reciprocating air pump connected to said fluid-pressure motor so as to be operated thereby.

8. A vacuum tire pump, comprising a reciprocating fluid-pressure motor having its intake connected to atmosphere and its exhaust adapted for connection to the intake manifold of an internal combustion engine, a reciprocating air pump connected to said fluid-pressure motor so as to be operated thereby, a tubular piston rod connecting the reciprocating members of said motor and pump, the space within said tubular spacing rod communicating with the interior of said fluid-pressure motor so that the air within it is rarefied to absorb heat from the compressed air in said pump, and a tube surrounding said air pump and forming part of the passageway for the air which passes through said fluid-pressure motor.

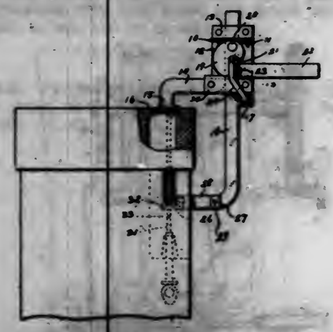


1,488,172. MACHINE FOR FORMING AND INSERTING BUSHINGS IN PIANO ACTIONS. JAMES R. SIMPLE, Chicago, Ill., assignor to Piano and Organ Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 26, 1920. Serial No. 354,199. 12 Claims. (Cl. 144—2.)

1. In a device of the kind described and in combination, a head member having an opening therein and provided with a channel connecting with and tangential to the axis of said opening at one side thereof, means for severing a portion of a strip of material inserted in said channel, means for thereafter engaging said portion and

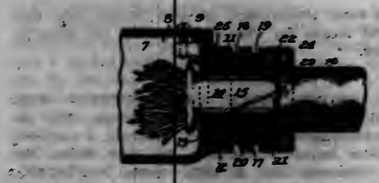
moving the same transversely of said channel into said opening, and means for thereafter moving the same in said opening.

1,488,173. FRONT-TRUCK CONSTRUCTION FOR SPREADERS. HERBERT C. SMITH, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 26, 1920, Serial No. 369,074. Renewed Mar. 6, 1922. Serial No. 541,589. 12 Claims. (Cl. 280—111.)



1. In a vehicle, an axle, a body having a centrally arranged depending member formed with transversely spaced bearing portions, and a pair of correspondingly spaced horizontally extending pins on the axle engaged by said bearing portions, whereby said body may rock on either pin as a point of support.

1,488,174. VALVE LIFTER. MILTON E. STEVENS, Riverton, Nebr. Filed July 14, 1923. Serial No. 651,516. 3 Claims. (Cl. 29—86.3.)



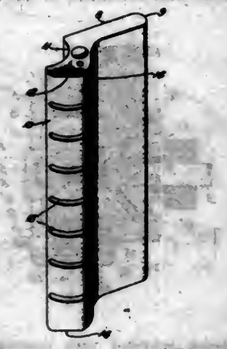
1. In a valve lifter, a yoke embodying vertical members and transverse members connecting said vertical members at the upper and lower ends thereof, one of said vertical members having an engine block engaging extension, a longitudinal movable bar vertically directed through the yoke, a disk cam pivoted to the bar at one side thereof intermediate the transverse members of the yoke, a handle on said cam whereby it may be rotated, said cam abutting one of said transverse members to shift the

vertically movable bar through the yoke in one direction, a connection between the cam and yoke shifting the bar

through the yoke in the opposite direction, and a valve spring compressing implement carried by the lower end of the bar.

1,488,175. CONNECTER. JOHANNES G. A. STRANDELL, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,701. 13 Claims. (Cl. 247—25.)

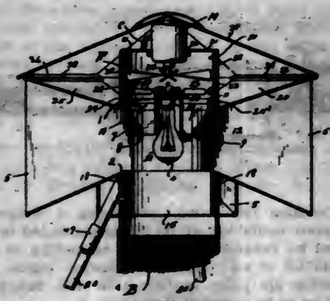
1. A terminal box structure containing an opening, an electric-current-conducting element in said opening and provided with a covering, an end of said covering being deflected outwardly, said box structure presenting portions between which the outwardly deflected portion of said covering is clamped, and means engaging said element outwardly beyond said deflected portion thereof and operating to secure said element in position relative to said box and prevent stress on the outwardly-deflected end of said covering.



1,488,176. PIPE-FRAMED METAL WHEELBARROWS OR THE LIKE. EDGAR SCHOFIELD, Long Lawford, England. Filed Feb. 14, 1920. Serial No. 358,751. 2 Claims. (Cl. 280—52.)

1. A shoe for applying to the curved foot portion of the leg of a metal framed wheelbarrow, said shoe comprising a curved trough-shaped body portion formed in one piece, lugs upstanding integrally from the edges thereof, and means securing said lugs together across the curved portion of the foot.

1,488,177. BUILDING. SAMUEL W. SIDER, Logansport, Ind., assignor to Playford Manufacturing Company, Logansport, Ind., a Corporation. Filed June 15, 1923. Serial No. 645,598. 3 Claims. (Cl. 72—6.)

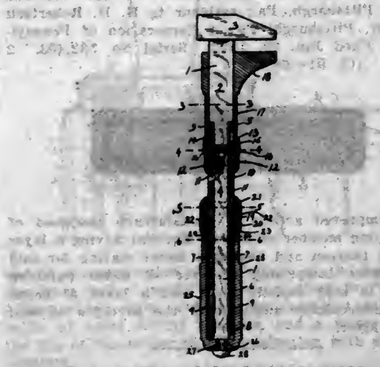


1. A building construction block of substantially rectangular outline provided at one edge portion with a longitudinally extending convex surface and provided at its opposite edge portion with a longitudinally disposed outwardly extending rib provided with a concave surface adapted to receive the convexed surface of an adjacent similar block, a single projecting button provided upon

one end of said rib, and a single recess provided at the opposite end of said rib and adapted to receive the button of a similar block placed against the same, the ends of the block being in parallel planes broken only by said single button and recess

---

1,488,178. INSECT TRAP. JAMES R. THOMAS and JAMES L. FLOYD, Kenton, Tenn. Filed Feb. 21, 1923. Serial No. 620,437. 5 Claims. (Cl. 43—113.)



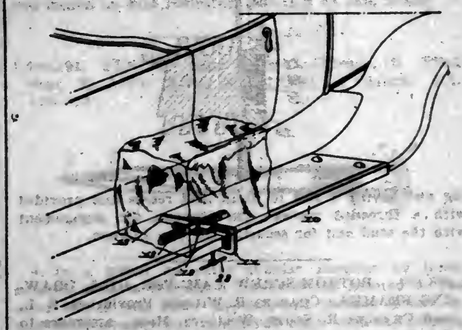
4. An insect catcher comprising a pair of spaced members, means for maintaining the same in spaced relation, a reflector horn operatively supported by said spaced members, a housing telescopically engaged with the upper spaced member, a support within said housing, arms extending outwardly from the support and exteriorly of the housing, said arms limiting the telescopical engagement of the housing with respect to the member, means for securing said arms to the member, a lighting unit carried by the support, arms overlying the housing and extending inwardly thereof, means for securing said last named arms to the first named arms, a clamping member secured to the inner portions of the second named arms, and a fan operatively supported by the clamping member, said fan operating to create a down draft.

1,488,179. WRENCH. PETER VOSBIKIAN and THOMAS VOSBIKIAN, Philadelphia, Pa. Filed Dec. 4, 1922. Serial No. 604,811. 3 Claims. (Cl. 81—174.)

1. A wrench comprising a bar having a threaded portion and a transversely flattened portion, a jaw fixed to the bar at its upper end, a movable jaw mounted to slide on the bar, a shank formed with the movable jaw and in sliding keyed engagement with the bar, conforming

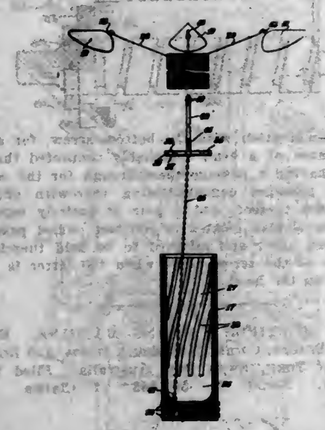
in fit to the transversely flattened portion thereof, an exteriorly prismatic element in threaded engagement with the threaded portion of the bar and having swiveled connection with the shank of the movable jaw, means for holding said element and said shank longitudinally together, a handle fixed to said bar at its lower end, and

enclosing a part thereof in spaced relation thereto and a sleeve swiveled on the handle against longitudinal movement thereon, having the said prismatic element in sliding engagement keyed therewith, said sleeve having a portion conforming in sliding fit to the prismatic element.



1,488,180. WIRE STRETCHER. LOUIS F. WALLEN, Wilsonville, Nebr. Filed Sept. 5, 1922. Serial No. 586,272. 1 Claim. (Cl. 254—76.)

A wire stretcher comprising a frame including parallel bars having terminal connecting and spacing members, a shorter bar disposed for longitudinal slidable movement between the parallel bars, transverse members on one end of the shorter bar and having their ends extended across the wider faces of the parallel bars, a link pivotally connected to one of said spacing members, a lever intermediately pivoted to the other end of the shorter bar and having one end pivotally connected with the other end of the link, a wire clamp on the shorter bar intermediate the lever and the transverse members, a hand lever on one of the transverse members and operatively connected with the clamp, a clamp on one of the spacing members, a hand lever on one of the parallel bars adjacent the spacing member which carries the link, and a link between the last hand lever and the last clamp.

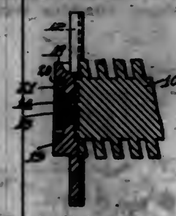


1,488,181. ICE HOLDER. CLARK WILLIAM WALLER, Portsmouth, Ohio. Filed June 26, 1923. Serial No. 647,859. 2 Claims. (Cl. 224—29.)

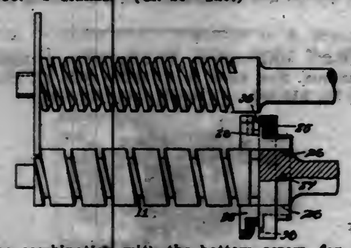
1. An ice holder for use on the running board of an automobile comprising a thin circular base plate adapted to be arranged on the upper side of the running board, ribs extending above and radially of and integral with the base plate and angularly disposed relative to each other, said ribs tapering toward their upper edges and being of relatively slight cross section so as to be adapted to become embedded in a block of ice, and attaching means including a U-shaped attaching bracket integral with

one of said ribs and adapted to embrace the running board and a clamping screw carried by the lower arm of the bracket and engageable with the running board.

1,488,182. ORDNANCE PROJECTILE. GORDON T. WHELTON, New York, N. Y. Filed Nov. 17, 1921. Serial No. 515,895. 6 Claims. (Cl. 102—29.)



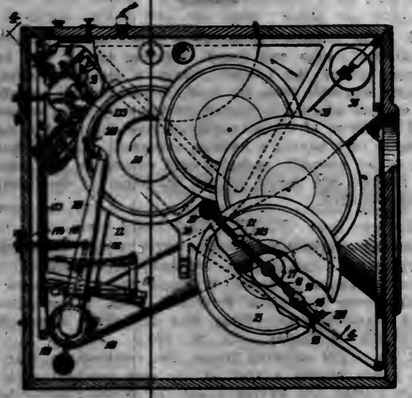
2. In an ordnance projectile, a hollow shell containing a powder charge and timed exploding means, and containing above the powder charge, a spreading missile wholly separable from the shell, consisting of a plurality of weights adapted to spread centrifugally when released and a system of wires interconnecting the weights, said weights each having a hooking extension, a central holding device normally engaging said extensions and means to release said device by the discharge of the missile from the shell.



1,488,183. TOP-SCREW CAM FOR GILL DRAWING FRAMES. CHARLES R. WILSON, Providence, R. I., and CHARLES R. SCOTT, Westboro, Mass., assignors to Gill Screw Associates, Worcester, Mass., a Corporation of Massachusetts. Filed May 7, 1923. Serial No. 637,055. 4 Claims. (Cl. 19—129.)

2. In a gill drawing frame, the combination with a top screw having a stud at the end provided with a screw thread and having a pair of opposite projections at the base of said stud extending to the circumference of the screw at the end of its threads, a double cam therefor having a double socket for receiving said pro-

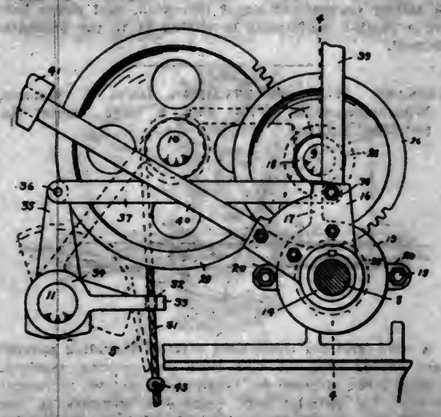
jections for locating the cam on the screw, said cam having a circular recess in its opposite face, and a locking nut having a flange to fit in said recess and provided with a threaded passage therethrough for engagement with the stud and for securing the cam thereon.



1,488,184. BOTTOM-SCREW CAM FOR GILL DRAWING FRAMES. CHARLES R. WILSON, Providence, R. I., and CHARLES R. SCOTT, Westboro, Mass., assignors to Gill Screw Associates, Worcester, Mass., a Corporation of Massachusetts. Filed July 27, 1923. Serial No. 654,288. 4 Claims. (Cl. 19—129.)

1. The combination with the bottom screw, for a gill drawing frame, of a head detachably connected thereto, said head having a passage therethrough for the screw, a pair of passages communicating therewith and on opposite sides thereof, and a pair of entirely separate cams having shanks located in the last named passages opposite each other and adapted to be held therein by the surface of the screw alone when the latter is fixed in position on the head.

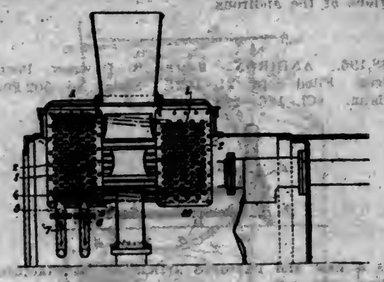
1,488,185. MULTIPLE TALKING MACHINE. EDGAR OSMOND YEAGER, Coraki, New South Wales, and ROBERT HAMILTON YORK, Swan Bay, Australia. Filed Sept. 28, 1921. Serial No. 503,843. 7 Claims. (Cl. 274—10.)



1. A multiple disc talking machine having a plurality of record tables adapted to be successively moved to and from the playing position, said tables being arranged in vertical echelon order around a centrally disposed support, means for applying a step-by-step helical movement to said support, and a reproducer mounted to swing about a fixed support into operative relation with said tables.

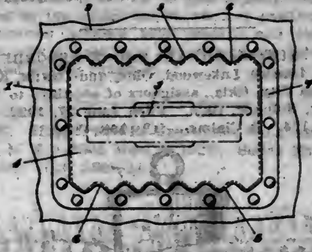
1,488,186. BUILDING MATERIAL. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1922. Serial No. 532,403. 2 Claims. (Cl. 91—68.)

1. An improved article of manufacture composed of an underlying member of fibrous material having a layer of asphalt thereon and having a metal coating for said asphalt layer comprising a layer of metal particles embedded in said asphalt layer and a layer of metal particles molecularly united with the particles of said embedded layer.



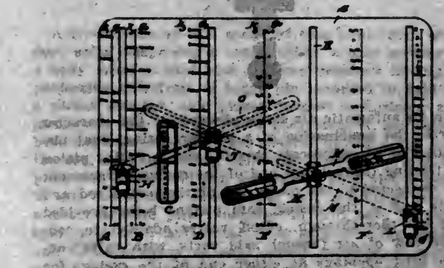
1,488,187. COMBINATION HOIST. FRANK R. ZIMMERMAN, Superior, Wis., assignor to Superior Iron Works Company, Superior, Wis., a Corporation of Wisconsin. Filed Feb. 6, 1923. Serial No. 617,416. 4 Claims. (Cl. 254—173.)

1. The combination with a spout hoist of the character described having three shafts protruding from one side thereof, said hoist being driven by a line shaft, of manually controlled power transmitting means upon the line shaft, a spout door operating line winding drum loosely mounted upon one of the protruding shafts of the hoist, power transmitting means intermediate of the drum and the manually controlled means upon another of the protruding shafts, gravity means mounted upon the line shaft for auxiliary control of the first mentioned power transmitting means, and means mounted upon the third protruding shaft of the spout hoist in cooperative engagement with the door controlling line for automatic action of the first mentioned power transmitting means.



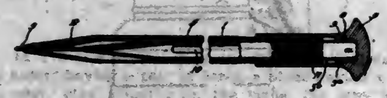
1,488,188. COMBINED FEED-WATER HEATER AND SPARK ARRESTER. ANDREAS ANDERSSON, Malmo, Sweden. Filed May 7, 1921. Serial No. 467,693. 1 Claim. (Cl. 122—426.)

A combined feed water heater and water cooled spark arrester, comprising independent groups of substantially horizontally arranged curved pipes, adapted to be positioned in the smoke box of the boiler and concentric to the smoke stack, tube plates connecting the ends of the curved pipes together to form a plurality of helical conduits extending from the top to the bottom of the heater, a water chest provided with a feed water inlet



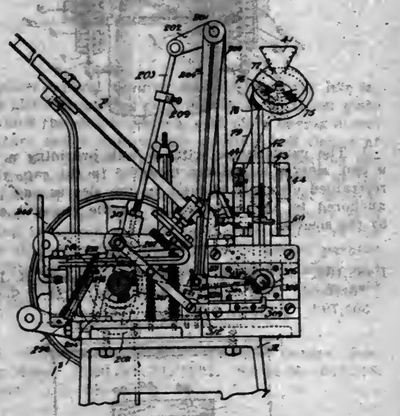
and in communication of the bottom of the heater with the inner helical conduits, a water chest provided with a feed water outlet and in communication with a plurality of outer helical conduits, and a water chest at the top of the heater in communication with all of said conduits.

1,488,189. HOOD FOR CAR WHEELS. MINOR C. BLEST, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Oct. 5, 1923. Serial No. 666,704. 7 Claims. (Cl. 105—364.)



2. A hood for a car wheel, said hood having corrugated side portions, a top portion integral with said sides and a continuous flange integral with said sides and top.

1,488,190. COMPUTING BOARD. GEORG BLOCH, Boblingen, Wurttemberg, Germany. Filed July 2, 1920. Serial No. 393,767. 7 Claims. (Cl. 235—61.)

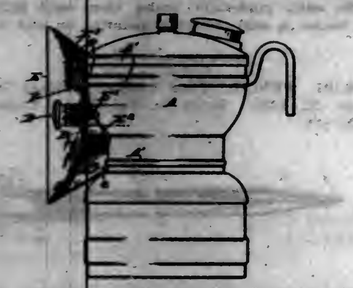


1. In a calculating and computing device in combination, a plurality of at least three parallel guideways, indicators movable in said guideways, indicating bars intersecting each other at one of the intermediate indicators and axially slidably engageable with said indicator, and respectively pivotally secured to the indicators of the outer guideways, scales along said guide ways, and means on said indicators pointing on said scales.

1,488,191. PENCIL. JOHN BRICKEN, Chicago, Ill. Filed Sept. 22, 1920. Serial No. 411,890. 4 Claims. (Cl. 120—18.)

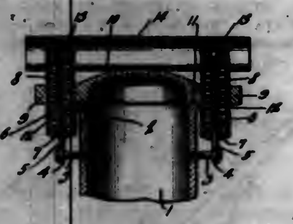
4. In a pencil an outer tubular member, an inner member slidable therein, a threaded cap secured to the outer end of said inner member, and threads formed in said outer member and adapted to coact with the threads of said cap, the threads of one of said members being slotted to provide resilient engagement thereof with the threads of said other member.

1,488,192. STRING CLOSURE-AFFIXING MACHINE. EMIL A. CLAUS, New York, N. Y. Filed June 20, 1918, Serial No. 240,906. Renewed Feb. 16, 1924. 2 Claims. (Cl. 93—61.)



1. In a machine of the class described, and in combination with means for receiving an envelope in a relatively fixed position, of means for feeding a plurality of strips of material to different portions of said envelope at parallel angles to the horizontal plane of said machine, means for cutting from said strips predetermined lengths thereof, and means for affixing the several lengths of said strips to different points of the envelope on the same axis thereof, and means for adjusting the distances apart of said strips without affecting the angle of feed thereof, to thereby afford adjustment of the machine for varying sizes of envelopes.

1,488,193. ACETYLENE LAMP. WILBUR A. COCHRANE, Sea Cliff, N. Y., assignor to Brock-Cochrane Company, a Corporation of Delaware. Filed Oct. 16, 1920. Serial No. 417,308. 8 Claims. (Cl. 240—1.)



1. In an acetylene lamp, the combination of a casing, a burner disposed exteriorly thereof, and a detachable reflector sustained behind the burner and formed on its

rear face with a reenforcing member shaped to fit and seat against the casing at a plurality of points in both

a circumferential and radial direction, whereby the reflector is afforded a firm and rigid support from the center outward when the lamp is in use.

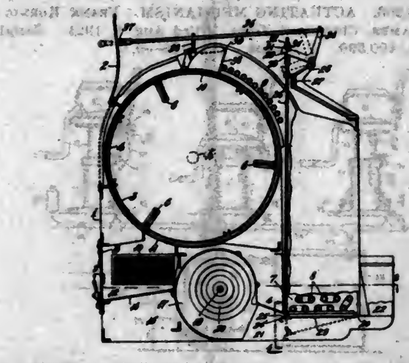
1,488,194. RADIATOR CAP. ELASHA DEAN CULLISON, Chicago, Ill. Filed Apr. 26, 1922. Serial No. 556,777. 2 Claims. (Cl. 220—35.)

1. The combination with a neck providing a seat, of a cap, sleeves adjustably mounted in the cap, yieldingly restrained elements slidable in the sleeves and pivotally anchored to the neck, and a handle engaged and held by the sleeves.

1,488,195. FIREPLACE HEATER. JAMES B. DAWSON, Portland, Oreg. Filed Sept. 19, 1921. Serial No. 501,792. 1 Claim. (Cl. 126—121.)

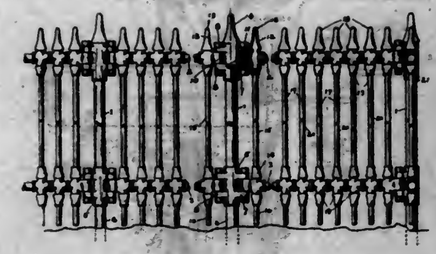
In a fireplace heater, an oblong rectangular vertical heating drum extending transversely at the rear of the fireplace, said drum having openings in its front wall provided with flanges, andirons at opposite sides of the fireplace, each comprising a vertically disposed hollow post portion forming an air chamber opening through the base of said post portion and a hollow horizontal arm communicating at its front end with said air chamber and having a flange at its rear end, the flanges of said horizontal arms of the andirons being coupled to the flanges of the drum openings and said post portions of the andirons being provided with supporting feet holding the base portion of said andirons at an elevation above the hearth and providing a plurality of air inlets leading to the base inlet of each air chamber, a radiator, and conductors leading from the drum to said radiator, said radiator comprising a casing of triangular form in cross-section having a straight vertical rear wall arranged in advance of the fireplace and extending above and below the lintel thereof, a horizontal bottom wall and a downwardly and forwardly inclined front wall, said inclined front wall being provided with heat outlets and forming a sloping surface for deflecting dust and foreign particles forwardly beyond the line of the post portions of the andirons.

1,488,196. ANDIRON. JAMES B. DAWSON, Portland, Oreg. Filed Sept. 21, 1921. Serial No. 502,204. 1 Claim. (Cl. 126—298.)



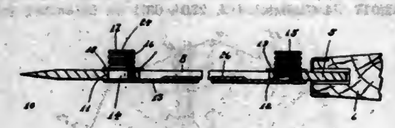
As a new and improved article of manufacture, an andiron comprising an upright post portion formed of a hollow body and providing an air chamber closed at the top and having an air inlet through the base of said post portion, a hollow horizontal arm portion having a passage extending continuously therethrough and communicating at one end with said air chamber at one side of said post portion, and an annular series of outwardly and downwardly inclined feet projecting from the base of the post portion and arranged to support the same at an elevation above the surface on which the feet rest, said feet being spaced to provide an annular series of passages therebetween for lateral flow of air from all sides to the space beneath the post and thence to the bottom inlet of the air chamber in the post portion.

1,488,197. AUTOMATIC AIR SHOCK ABSORBER. ALBERT H. DEMKE, Lakewood, Ohio, and DANIEL K. POPE, Oklahoma City, Okla., assignors of one-third to William A. Kelly, Sulphur, Okla. Filed June 27, 1922. Serial No. 571,174. 5 Claims. (Cl. 188—88.)



1. In an automatic air shock absorber of the character set forth, the combination of a tubular casing, dual pistons adapted to reciprocate therein, and including piston rod extending through one end of the casing, attachment means connected to the outer end of the piston rod and opposite end of the casing, said pistons being provided with ports therethrough, cutoff valves adapted to control the flow of air through said ports, with valve control to inlet openings at either end of the casing, for alternately admitting air to said cylinder at opposite sides of said pisons, and a port through said piston rod with check valve at outer end co-operating with said ports to control the discharge of air therefrom.

1,488,198. DRYING APPARATUS. JOHN J. DEWEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Jan. 12, 1918, Serial No. 211,531. Renewed May 23, 1922. Serial No. 563,125. 21 Claims. (Cl. 34—5.)



2. Drying apparatus, comprising a casing provided with a drying chamber in its upper portion, a heating chamber behind the drying chamber and a passage leading to an outlet, an air circulating device located beneath the drying chamber and communicating with said passage, a screen chamber located between the drying chamber and device, a movable member arranged in one position to divert a portion of the air to said heating chamber and a portion to the outlet and in another position to close communication between said passage and the heating chamber, and an air inlet to said casing between said device and drying chamber.

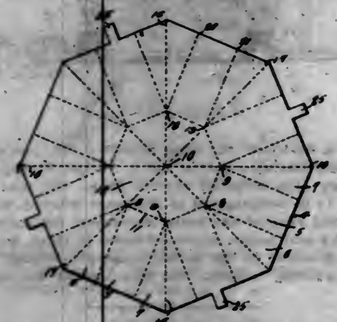
1,488,199. IRON FENCE. SEBASTIAN FALENDYSH, Rochester, N. Y. Filed Mar. 2, 1923. Serial No. 622,428. 1 Claim. (Cl. 256—21.)

A fence made up of a series of post units, each of said post units comprising a cap member, a base member and a body member, said base and cap members having lugs projecting therefrom, a hinge pin mounted in said lugs, a picket member, said picket member comprising a cap member, a base member and a body member, said cap and base members of said picket member having a lug formed thereon, said lugs being mounted to swing on said hinge pins, and hinge said cap member of said picket member to said cap member of said post unit and hinge said base member of said picket member to said base member of said post unit, horizontal rails supported by said cap and base members of said picket member, a separate picket member comprising cap and base members, ducts leading through said cap and base members of said separate picket members, said horizontal rails being adapted to pass through the ducts in said cap and base members and support a series of said separate picket members.

1,488,200. SLICING KNIFE. HENRY GEHRING, Cincinnati, Ohio. Filed Apr. 18, 1922. Serial No. 555,207. 2 Claims. (Cl. 30—20.)

1. In a device of the class described the combination of a holder having a pair of bores, a blade having a cutting edge, pins mounted on the blade, the pins being adapted to be reciprocated in the bores whereby to space the cutting edge of the blade at various distances from the holder and having grooves formed in them, and clips slidably mounted on the holder adapted to engage in the grooves whereby to secure the pins against movement.

1,488,201. HEATING ATTACHMENT FOR VENDING MACHINES. MARK A. GLASCO, Columbus, Ohio, assignor of one-half to Hugh Huntington, Columbus, Ohio. Filed Feb. 15, 1922. Serial No. 536,743. 6 Claims. (Cl. 34—21.)

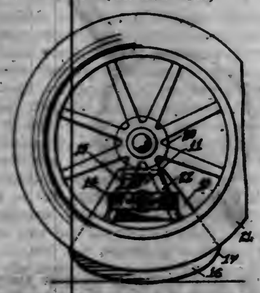


1. A heater for nut vending machines and the like including a globe supporting ring, a base or partition plate around which the ring is formed, said plate having a central aperture and a downwardly opening feed throat at one side of the aperture, an arcuate coil supporting bar of insulating material between the inner surface of the ring and around that portion of the feed throat nearest to the ring, said bar being secured at its opposite ends to the ring in spaced relation to the latter and to the said feed throat, contact posts fixed in spaced parallel relation through the ring, and a heating coil along and around the said bar, connected at its ends to the said contact posts.

1,488,202. PENDULUM BALL. WILLIAM GAUHN, Roslindale, Mass. Filed Jan. 31, 1922. Serial No. 616,218. 6 Claims. (Cl. 58—135.)

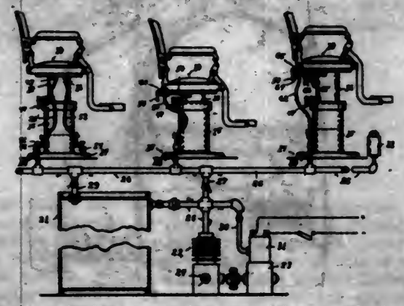
1. A pendulum ball having a chamber therein, a plurality of flatly extended heavy elements fitted to said chamber, and means for releasably fastening said elements in said chamber.

1,488,203. SANITARY LINING FOR GARBAGE CANS. JAMES Q. HOUSE, Lock Haven, Pa., and GORDON H. REIFSNIDER, Larchmont, and WILLIAM A. ROWLEY, Mamaroneck, N. Y. Filed Aug. 15, 1922. Serial No. 582,077. 4 Claims. (Cl. 220—63.)



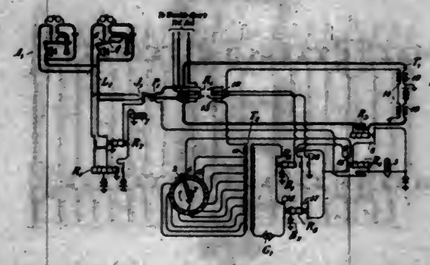
1. As an article of manufacture, a removable sanitary lining for garbage cans comprising a sheet of paper of the shape of a regular polygon so folded and refolded upon itself as to produce a flat rectangle, which when unfolded by reason of the creases made by the folds, is easily positioned in a cylindrical can of the size for which said lining is made.

1,488,204. VEHICLE BRAKE. HARRY JERVIS, Weirton, W. Va. Filed Nov. 6, 1922. Serial No. 599,843. 1 Claim. (Cl. 188—8.)



The combination with a sled including runners connected by a cross bar and having a rider's platform, of brackets secured to said platform, an inverted U-shaped yoke mounted in said brackets, a pair of plates fixed respectively to the terminal ends of said yoke, one of said plates being disposed adjacent to each runner, peripheral teeth formed on said plates for direct penetration into the surface over which the sled may be travelling; said teeth being progressively varied in length and having their apexes disposed progressively varying distances from the axis of rotation of said plates, a vertical shaft mounted in said cross bar, a handle for rotating said shaft, a crank thereon, and a rod connecting said crank with an intermediate portion of said yoke.

1,488,205. JACK FOR VEHICLES. THOMAS J. JUDGE, Northboro, Mass. Filed Sept. 28, 1922. Serial No. 591,161. 3 Claims. (Cl. 254—94.)



1. As an article of manufacture, a jack adapted to be attached to the side of a wheel, comprising a block having a surface extending beyond the tire and provided with a lateral projection of general triangular shape projecting through the space between two spokes and adapted to fit against their sides substantially throughout their length, and means extending from said projection for fixing the projection and block to the spokes of the wheel.

1,488,206. ACTUATING MECHANISM. FRANK KOENIGKRAMER, Cincinnati, Ohio. Filed Aug. 8, 1921. Serial No. 490,590. 7 Claims. (Cl. 138—9.)

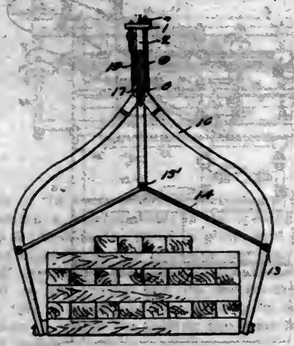
1. An actuating apparatus comprising a cylinder, a plunger mounted in said cylinder and movable relative to said cylinder, a member operatively connected to and adapted to be actuated by the relative movement of said cylinder and plunger, a storage reservoir containing a substantially noncompressible liquid, a port through which said liquid may flow to the interior of said cylinder, a valve operable to positively vary and control the rate of flow of said liquid through said liquid port in either direction, and means controllable to alternately provide a pneumatic pressure in said storage reservoir above the surface of said liquid and to release said pneumatic pressure.

1,488,207. SIGNALING SYSTEM. GEORGE W. KUHN and ROOSA G. RAMSDELL, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,175. 8 Claims. (Cl. 179—84.)

1. In a signaling system, the combination of a telephone line having associated therewith a substation set in its operated position, a source of signaling potential, means for connecting said source with said line at the instant of minimum potential, means for disconnecting automatically said source from said line when said substation set is restored to its normal nonoperated position, and means for automatically preventing the reconnection of the said source if the said substation set is subsequently operated.

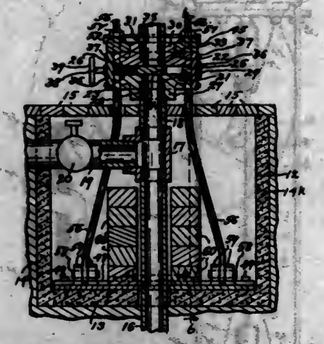
1,488,208. VALVE-PIN-INSERTING TOOL. DUNBAR G. LAPLACE and EDWARD H. MOORE, Woodville, Miss. Filed Nov. 21, 1922. Serial No. 602,386. 1 Claim. (Cl. 81—3.)

In means for setting valve-stem pins, the combination of a comparatively long casing, a cap having a central opening therein, and threaded to one end of the casing, a movable stem having a portion thereof arranged in the casing and having a grip on one end thereof, a spring surrounding the portion of stem within the casing and secured to one end of the stem and abutting at its opposite end against the interior of the casing, a comparatively thin stem secured to and forming a continuation of the first stem, a second casing threaded to the first casing and surrounding the thin stem; said second casing having an open surface on one side, and a spring clip secured to the second casing and adapted to enter the open end of the same.



1,488,209. CORSET. JOSEPH LEONARD, Allentown, Pa., assignor to Fifth Avenue Corset Company, Inc., Allentown, Pa., a Corporation of New York. Filed Jan. 13, 1923. Serial No. 612,413. 6 Claims. (Cl. 2—73.)

1. A corset which completely encircles the body and is split at the sides below the waist line, side lacings connecting the adjacent edges of the split sides together and an abdominal belt terminating at its ends adjacent the side splits and connected at its ends to the said side lacings.

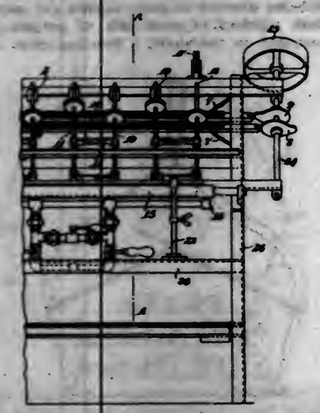


1,488,210. TIE-HANDLING MACHINE. CHARLES W. LEWIS, Portsmouth, N. H. Filed Apr. 21, 1923. Serial No. 633,674. 5 Claims. (Cl. 294—112.)

1. A device of the class described including a beam, a plurality of slotted rods depending from the beam, a shaft movable in the slotted rods, a plurality of grapple arms pivoted on the shaft at their upper ends and arranged in spaced pairs, one pair being disposed adjacent each slotted rod, a plurality of link rods, a pair of said link rods being pivoted to each slotted rod and to the intermediate portions of each pair of grapple arms, a pulley journaled on the shaft, a hoisting cable attached

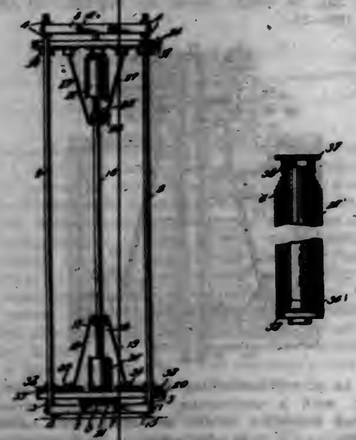
to the beam, a second hoisting cable trained over said pulley and attached to said beam whereby the grapple arms may be moved to an open position by pulling upon the first mentioned cable and to a closed position by pulling upon the second mentioned cable.

1,488,211. OIL-WELL-CONTROLLING VALVE ATTACHMENT. ANDREW L. LOEFFLER, Cleveland, Ohio. Filed Jan. 24, 1923. Serial No. 614,574. 11 Claims. (Cl. 166—15.)



1. In an oil-well-controlling valve-attachment, the combination, with a well-casing, a valve-casing arranged above and connected to the well-casing and having a fluid-outlet and a fluid-inlet which is in communication with the well-casing, and a valve arranged to control communication between said fluid-inlet and said fluid-outlet, the aforesaid valve-casing being provided at the top thereof with an upwardly projecting member which is angular in plan, and the aforesaid fluid-outlet being formed centrally of said projecting member, of a cap plate embracing and conforming to said projecting member and mounted on the valve-casing, and means, independent of the well-casing, for preventing upward displacement of said cap-plate.

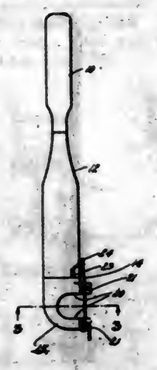
1,488,212. APPARATUS FOR SOLDERING CANISTERS. WILLIAM JOHN LUXTON, Liverpool, England, assignor of one-half to William Ahira Green, London, England. Filed Nov. 11, 1922. Serial No. 600,368. 5 Claims. (Cl. 113—68.)



1. A can soldering apparatus comprising a frame, racks slidably mounted in said frame, a plurality of spindles journaled in the frame at right angles to the racks, gears

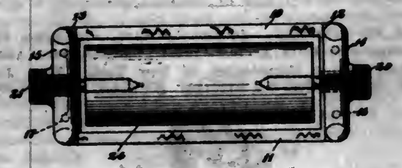
carried by said spindles and gears of alternate spindles meshing with opposite racks, inter-acting forks mounted

on adjacent spindles, a flux container and a solder container both arranged in the order named at the bottom edge of the frame, and means for reciprocating said racks.



1,488,213. DISPLAY RACK. ELMER E. MCELROY, Youngstown, Ohio. Filed Nov. 20, 1922. Serial No. 602,136. 2 Claims. (Cl. 211—18.)

1. The combination with superposed rotatable heads, a central connection therebetween, and a frame in which the heads are mounted, of socket members depending from the lower face of the upper heads and opening downwardly for receiving the upper end of upwardly displaced cores of rolled material, disks on the lower head for engaging the lower end of the rolled material when displaced downwardly relative to the core, and means upon the center of each disk for supporting the upwardly displaced core with its lower end above the level of the lower end of the downwardly displaced material.

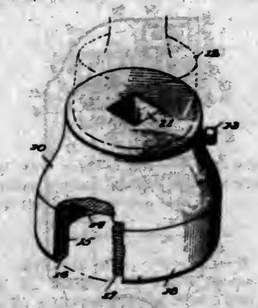


1,488,214. TOOTHBRUSH. SAUL MASON, South Bend, Ind. Filed Jan. 6, 1923. Serial No. 610,958. 1 Claim. (Cl. 132—84.)

A combination tooth brush and dental floss holder including a handle having a brush head at one end and an opening at the other end leading to a compartment formed in the handle, a member having a hub portion insertable at the open end closing the opening and having parallel spaced apart arms with intersecting grooves formed in their extremities, a combination holder and guide mounted on the handle, and a coil of dental floss

arranged in the compartment and adapted to be paid out therefrom through a slot formed in the handle adjacent the hub and having the paid out portion of the floss passing under the holder and fixed in the intersecting grooves.

1,488,215. ROLLING-PIN. FRANK MILLER, West Hoboken, N. J. Filed Nov. 2, 1922. Serial No. 598,630. 1 Claim. (Cl. 107—50.)

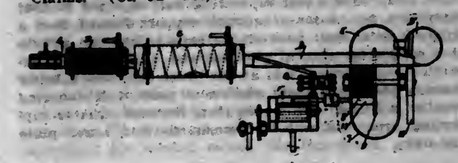


A rolling pin, comprising a frame of rectangular form, including side plates and end plates, sections upon the upper ends of the end plates and formed with hand-hole openings, and a roller removably arranged in said frame and rotatably supported in the respective end plates, the diameter of the roller slightly exceeding the height of the side and end plates.

1,488,216. APPARATUS FOR TREATING ORGANIC MATERIAL. WILLIS E. OVERTON, Baltimore, Md. Filed Apr. 14, 1920, Serial No. 373,990. Renewed Aug. 20, 1923. 12 Claims. (Cl. 34—44.)

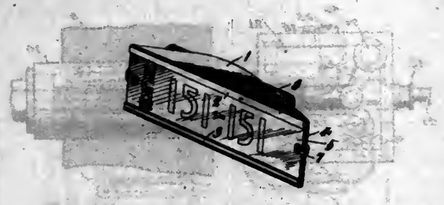
1. In apparatus for treating organic material, a normally stationary container having perforations in the lower portion thereof, a pipe having jet tubes having permanent engagement with said perforations, means for supplying a fluid treating medium through said pipe and jet tubes, said container being capable of rotary movement, and means for imparting a rotary movement to said container, pipe and jet tubes.

1,488,217. WRENCH. LOUIS A. PRESTEK, Seattle, Wash. Filed Jan. 17, 1923. Serial No. 613,198. 5 Claims. (Cl. 81—121.)



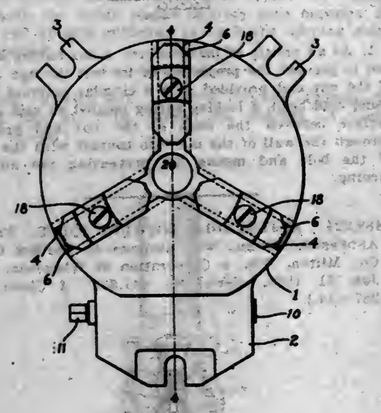
1. A socket wrench having a head of hardened steel formed with a work engaging socket, said head being provided with an annular channel in its periphery, a wrapping of steel wire wound under tension in the channel of the head, the turns of the wrapping being soldered to each other and to the head, and a bushing fitted on the head and secured thereto and enclosing said wrapping of wire.

1,488,218. APPARATUS FOR MANUFACTURING PULP. CHARLES W. SHARTLE, Middletown, Ohio. Filed June 17, 1920. Serial No. 389,584. 9 Claims. (Cl. 92—20.)



1. In an apparatus for reducing pulp, the combination, with a raw stock breaker and a plurality of finishing beaters, of connections between said breaker and beaters consisting of stock-circulating pipe having intake and discharge connections with said breaker and settling troughs, whereby stock from the breaker will be circulated through said pipe and subjected to a settling operation in said troughs before being delivered to said finishing beaters.

1,488,219. APPARATUS FOR SALVAGING USABLE MATERIALS FROM STREET SWEEPINGS AND DUMP STOCK. CHARLES W. SHARTLE, Middletown, Ohio. Filed June 17, 1920. Serial No. 389,586. 10 Claims. (Cl. 92—20.)



1. In a reducing apparatus for making pulp, the combination of a sifter and means to deliver raw stock thereto, a disintegrator in series with the sifter and adapted to receive the stock therefrom, and means comprising a settling trough, a finishing beater into which said trough delivers its whole flotatable contents, and a thickener into which said finishing beater delivers reduced material, all arranged in series with said disintegrator and cooperating therewith to effect reduction of said stock.

1,488,220. LICENSE-TAG HOLDER. NORMAN STEVENS, Mount Morris, Mich. Filed Nov. 21, 1922. Serial No. 602,390. 1 Claim. (Cl. 40—132.)

A device of the class described including a casing having an opening, a panel movable in the opening of the casing, a clip for holding the panel in place, said clip formed from a bar of yieldable and bendable material overlapped upon itself throughout its length and having its meeting ends fixed to the casing and its intermediate portion curved so that a portion of the clip may be bent over so as to engage the panel for holding the same in the opening of the casing.

1,488,221. DRILL-PRESS CHUCKING VISE. CHARLES F. SWISSGABEL, Dayton, Ohio. Filed Aug. 27, 1920. Serial No. 406,518. 7 Claims. (Cl. 77—63.)

1. A chucking vise, including in combination with an inverted housing constituting a vise mounting base, chuck jaws operably mounted in said base, a bottom closure for the housing having a bearing thereon, chuck jaw actuating mechanism supported on said bearing, including a disc having cams formed therein an operably connected thereby to said jaws, a second disc operable in a direction opposite to said cam disc and coacting therewith to exclude foreign substances from the chuck mechanism, and operating connections for said chuck actuating mechanism.

1,488,222. METAL-WORKING TOOL. NAPOLEON R. THIBERT, Worcester, Mass. Filed Mar. 4, 1922. Serial No. 541,252. 8 Claims. (Cl. 82—1.)

1. In an internal metal working device, the combination of a support mounted to reciprocate, a head yieldingly carried by the support and movable forward with the support until it meets resistance and then capable of stopping without stopping the motion of the support, a slide movable laterally in the head, the head having means

for guiding the slide, a tool movably mounted on the slide and adapted to enter the interior of a blank to be

finished, and oscillatable means within the head for moving the slide sideways when the longitudinal motion of the head is stopped.

1,488,223. LOCK NUT. PAUL D. THIERET, Springfield, Mass. Filed May 23, 1923. Serial No. 640,964. 5 Claims. (Cl. 151—25.)

1. As an article of manufacture, a nut having a closed end to prevent the projection of its bolt through the end of the nut and provided with a circular external surface under said head, a locking spring located on said circular surface between the ends of the nut and projecting through the wall of the nut into contact with the thread of the bolt and means for preventing the nut from turning.

1,488,224. ADJUSTABLE LOCKING JOINT. FRITS A. ANDERSON, Milton, Wis., assignor to Burdick Cabinet Co., Milton, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1921. Serial No. 441,335. 1 Claim. (Cl. 287—14.)

In a device of the character described a pair of members hinged together, one of said members having a tongue with friction washers disposed adjacent thereto and the other member having a pair of arms embracing said tongue and the washers thereon, a pivot bolt provided with a wing nut for manually turning, said bolt having a head formed to interlock non-turnably with respect to the adjacent arm.

1,488,225. METHOD OF VENTILATION. HENRY BARR, St. Louis, Mo. Filed May 5, 1920. Serial No. 379,072. 5 Claims. (Cl. 98—27.)

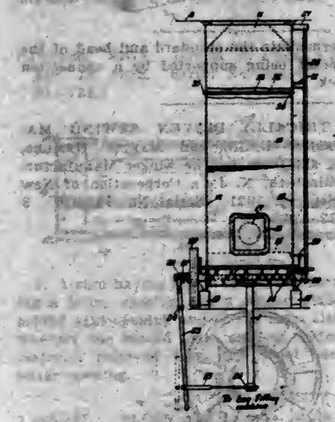
3. In the ventilation of rooms, the method which consists in delivering to a room fresh air, causing the fresh air so delivered to continually rise and fall through a substantial range in temperature irrespective of room

temperature, and controlling the amount of temperature variation.

1,488,226. ADJUSTABLE BRACKET FOR SUPPORTING WALL RADIATORS. CHARLES J. BRANCH, Philadelphia, Pa. Filed Mar. 8, 1923. Serial No. 623,567. 5 Claims. (Cl. 248—30.)

1. An adjustable bracket for supporting wall radiators, comprising a rear supporting wall engaging member carrying a nut, a lower radiator support formed from a strip of metal bent between its ends to provide a radiator supporting arm at one end and a downwardly extending rear vertical arm at the other end, which latter engages the lower front surface of said wall engaging member, a bottom reinforcing plate for said radiator supporting arm, and a bolt common to said lower plate and nut.

1,488,227. METHOD AND APPARATUS FOR APPLYING BELT HOOKS. WILLIAM H. BRISTOL, Waterbury, Conn. Filed Dec. 26, 1922. Serial No. 609,006. 5 Claims. (Cl. 1—50.)

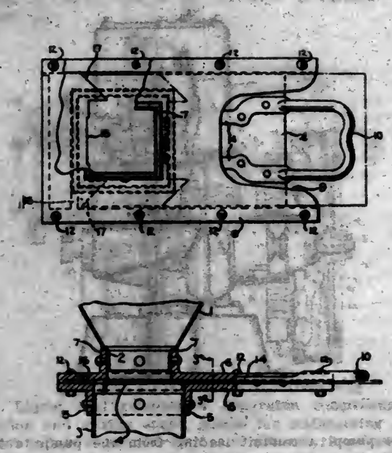


4. Apparatus for securing belt hooks, comprising a block having grooves over a portion of the surface, a guide member movably secured in the block transversely of the grooves therein and adapted to be projected beyond the upper surface thereof, an oscillatable slotted

member, said grooves and slots being adapted to receive the belt hooks, and means to temporarily hold the hooks to said oscillatable member, said hooks in an overturned

position of the said member being adapted to rest against further surface of the block serving as an anvil for securing the hooks to the belt.

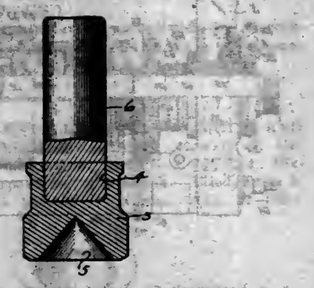
1,488,228. MIXING BIN. WILLIAM G. BURNS, New York, N. Y., assignor to Jabez Burns & Sons, New York, N. Y., a Corporation of New York. Filed Apr. 3, 1923. Serial No. 629,548. 8 Claims. (Cl. 221—120.)



1. A ground coffee and chaff mixing and discharging bin provided with an outlet in the lower portion thereof, means for dislodging the chaff and fine particles tending to adhere to the sides thereof, and mechanism below said means for conveying the contents of the bin toward the outlet and for mixing the loosened particles with the main body of the bin contents, said dislodging means and said mixing and conveying mechanism being operable substantially simultaneously with filling and discharge whereby the discharge comprises substantially constant mixture of coffee with chaff and fine particles.

3. A passageway provided with means for passing a ground product therethrough, and means for simultaneously tapping several sides of the passageway to dislodge adherent material.

4. A bin, tapping means for striking a side thereof, mixing and discharging means within said bin, a gate controling the discharge, and means for simultaneously controlling the mixing means, tapping means, and gate.

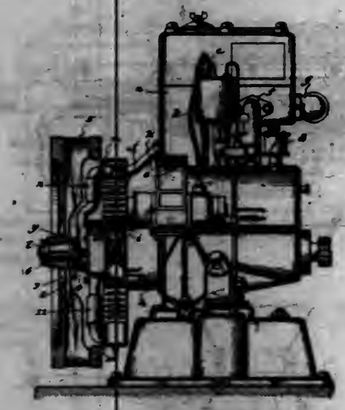


1,488,229. MOVABLE GATE FOR BINS AND THE LIKE. WILLIAM G. BURNS, New York, N. Y., assignor to Jabez Burns & Sons, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1923. Serial No. 657,507. 2 Claims. (Cl. 221—145.)

1. The combination with a chute, of a guideway closed at one end and extending across said chute, a delivery pipe larger than said chute, a substantially rectangular gate slidable in the guideway for controlling the chute and delivery pipe, said gate being shaped at its forward corners to clear the guideway of any material tending

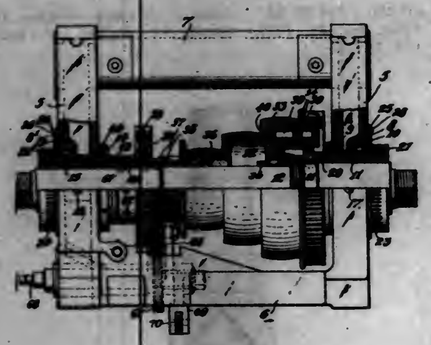
to pack therein and provided with means for engagement with the inside of the delivery pipe opposite the closed end of said guideway to limit the opening movement thereof.

1,488,230. RIVET SET. ISAAC J. CUNDIFF, Chicago, Ill. Filed Dec. 31, 1919. Serial No. 348,690. 1 Claim. (Cl. 78—46.)



A rivet set comprising a head having a recess in one side with the side wall of said recess substantially cylindrical, the bottom wall substantially plane and the corners between said side wall and bottom rounded, and a shank having one end disposed in and substantially fitting all of the surfaces of said recess, said end of the shank having a snug sliding fit with said recess.

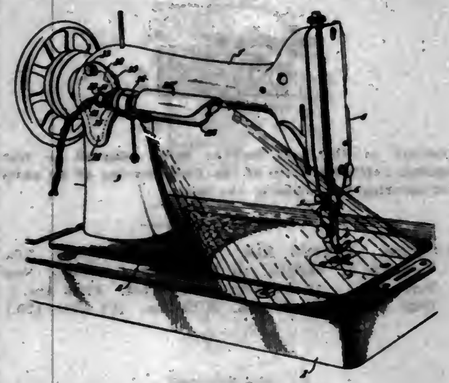
1,488,231. POWER-UNIT ASSEMBLY. EVERETT B. CUSHMAN, Lansing, Mich., assignor to Bean Spray Pump Co., San Jose, Calif., a Corporation of California. Filed Aug. 11, 1923. Serial No. 656,952. 13 Claims. (Cl. 123—170.)



1. The combination of a water jacketed engine provided with a crank shaft extended at one end, a radiator provided with upper and lower headers and concentric with the extended crank shaft, a water pump having a rotat-

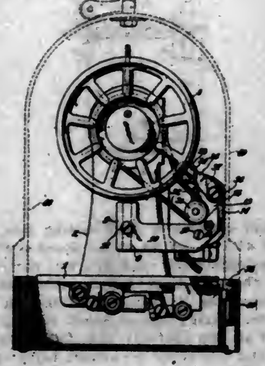
ing member mounted on the crank shaft, a conduit leading from the water jacket through the top of the radiator

to the pump, a conduit leading from the pump to the lower header of the radiator, and a conduit leading from the upper header of the radiator to the water jacket.



1,488,232. HEADSTOCK. HUBERT DALTON, New York, N. Y. Filed Oct. 11, 1921. Serial No. 507,033. 6 Claims. (Cl. 82—30.)

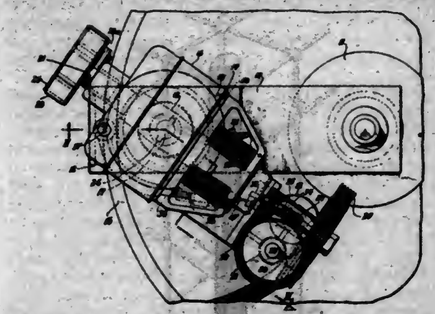
1. A headstock for metal working machines including a spindle having means at each of its ends for the connection of a driven part thereto, a bearing for each end of said spindle, driving means on the spindle between said bearings, a thrust receiving collar engaged with the inner end of each bearing, and an adjustable device interposed between the drive means and one of said collars for compensating for wear in the bearings incident to end thrust of the spindle in either direction to thereby maintain the spindle in an axially fixed position.



1,488,233. LIGHTING ATTACHMENT FOR SEWING MACHINES. FREDERICK DIEHL, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 5, 1921. Serial No. 449,968. 9 Claims. (Cl. 240—2.)

1. The combination with a sewing machine frame having a bed and gooseneck including a standard and overhanging horizontal arm terminating in a head, together with the usual stitch-forming and feeding mechanisms, of an electric lighting device including a lamp-bulb and lamp-socket directly mounted horizontally closely in rear of and alongside the horizontal member of the

gooseneck and intermediate the standard and head of the gooseneck, said socket being supported by a connection with said gooseneck.

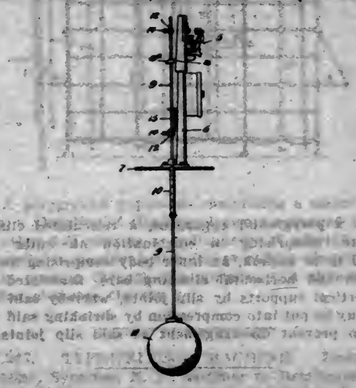


1,488,234. ELECTRICALLY-DRIVEN SEWING MACHINE. FREDERICK DIEHL and MARTIN HEMLER, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 3, 1921. Serial No. 498,316. 8 Claims. (Cl. 172—36.)

1. The combination with a sewing machine having a frame formed with a bed and a hollow bracket-arm standard, and a main-shaft sustained by said frame, of a motor permanently mounted in driving position on said frame and at all times having its power-shaft below the level of and substantially parallel with the sewing machine shaft, said motor having an armature and field coils and a motor-frame encircling and enclosing said armature and field coils and externally flattened vertically at opposite sides of the motor-shaft and disposed with one of its flattened faces closely adjacent to the standard.

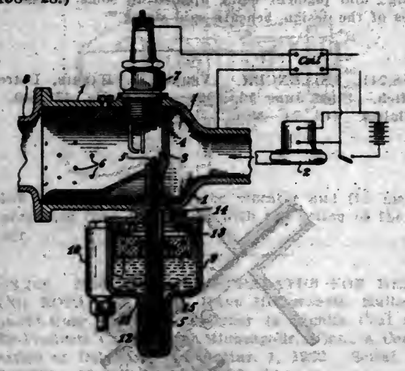
1,488,235. STONE-DRESSING MACHINE. LEONARD DOTZEL, New York, N. Y., assignor to Wallace T. Jones, Jr., Brooklyn, N. Y. Filed June 20, 1921. Serial No. 478,810. 16 Claims. (Cl. 125—28.)

1. In a stone dressing machine, a driving shaft, a disk shaft disposed substantially parallel to the stone to be dressed and having one or more cutting disks mounted thereon, power operated means for rotating said disk shaft, means operated from said driving shaft for oscillating said disk shaft in a plane substantially parallel to the surface of said stone, and means also operated by



said driving shaft for advancing said disk shaft in a direction substantially perpendicular to said surface to increase the depth of cut of said disks.

1,488,236. SIGN. DANIEL F. DUCK, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 551,877. 5 Claims. (Cl. 40—133.)

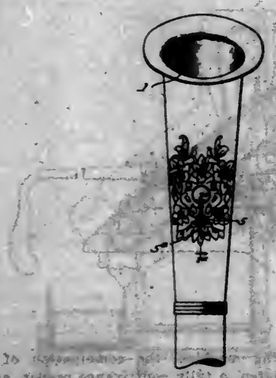


1. A sign having a sign letter consisting of a plate having a letter opening and a second plate located directly behind said opening and of the same size as said opening, whereby the second plate may, if desired, consist of the material removed from the front plate to make the letter opening.

1,488,237. FLOAT-ACTUATED ELECTRIC SWITCH-OPERATING MECHANISM. AUGUSTUS C. DURDIN, Jr., Chicago, Ill., assignor to Chicago Pump Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1922. Serial No. 541,659. 4 Claims. (Cl. 200—84.)

1. Float actuated electric switch operating mechanism, comprising a float and a float rod secured thereto, spaced switch lever operating collars secured thereon, and an auxiliary switch lever operating element mounted on said float rod and connectible with and disconnectible from one of said collars, whereby the float rod may become effective at a plurality of positions.

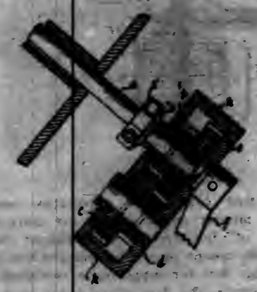
1,488,238. COMBUSTION APPARATUS. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Feb. 11, 1920. Serial No. 357,846. 5 Claims. (Cl. 158—28.)



1. Liquid fuel combustion apparatus comprising an ignition and mixing space, means for maintaining coincident inflow of air thereinto and exhaust therefrom, an igniter therein, means operating independently of control through the air flow for supplying a two-stage delivery of fuel to said space, the first stage being at a rate predetermined to suit the ignition characteristics of said space and the second stage to suit the requirements of continued normal combustion therein.

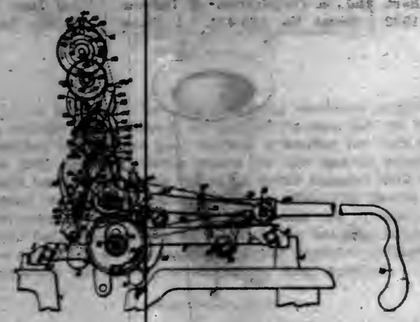
1,488,239. PROCESS FOR THE MANUFACTURE OF PHTHALIMIDE. ARTHUR GEORGE GREEN and STANLEY JOSEPH GREEN, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed July 3, 1922. Serial No. 572,724. 4 Claims. (Cl. 260—124.)

4. Process of manufacturing phthalimide by directly oxidising α-nitro-naphthalene by means of hot air in the presence of oxide of vanadium as catalyst.



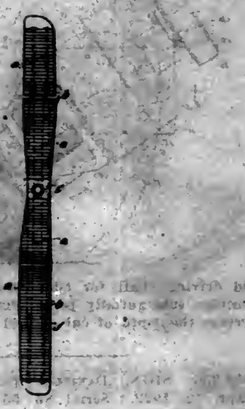
1,488,240. ORNAMENTALLY-ENGRAVED METAL AND METHOD OF PRODUCING SAME. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed June 2, 1922. Serial No. 565,471. 1 Claim. (Cl. 41—38.)

The method of ornamenting metal, which consists in applying to the surface of the metal, platings, coatings, films, or the like, to produce a composite material having strata of contrasting appearance, and then cutting



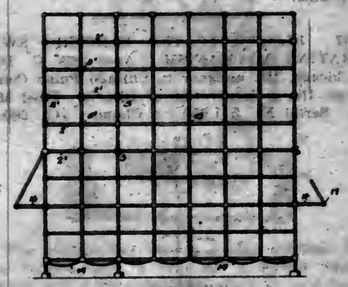
through one or more strata of the resultant piece to disclose under strata of the composite material on lines conforming to the ornamentation to be produced; the resultant surfaces and cuts being finished with a transparent sizing; and pigment being applied to some of the surfaces of the design, beneath said sizing.

1,488,241. SILENCER. VERNON J. HARRIS, Detroit, Mich. Filed June 10, 1921. Serial No. 476,440. 8 Claims. (Cl. 74—9.)



1. In combination with the steering post of a motor vehicle and the steering gear casing, a clamping device adjustable on the steering post at a point above the casing, spring means interposed between the clamp and casing and held under tension by the clamp to exert upward pressure on said post relative the casing.

1,488,242. TYPEWRITING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 22, 1922. Serial No. 570,220. 90 Claims. (Cl. 197—182.)

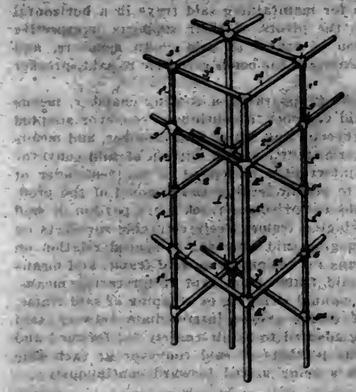


1. In a typewriting machine, the combination of a platen carriage, a platen, a tally contrivance proper, and a support therefor comprising a pair of brackets pivotally supported on the carriage and a tie rod connecting said brackets, said support maintaining said tally contrivance at rest against the platen.

1,488,243. PROPELLER FOR AIRCRAFT. JAKOB HAW, Berlin, Germany. Filed Feb. 16, 1921. Serial No. 445,580. 10 Claims. (Cl. 170—159.)

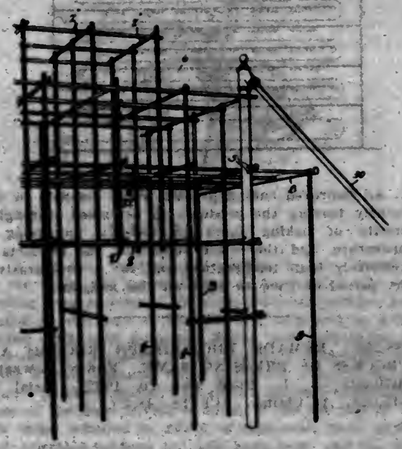
1. In a propeller for air-craft, a blade comprising, steel rods, cross pieces of wood or the like arranged in groups on the steel rods and glued together, and cross members adapted to be displaced on the steel rods and to firmly secure the groups of cross pieces thereon.

1,488,244. CLIMBING STRUCTURE. SEBASTIAN HINTON, Winnetka, Ill., assignor to Junglegym, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1920. Serial No. 414,080. 18 Claims. (Cl. 46—69.)



1. In a playground apparatus, a reticulated climbing structure, comprising in combination an outer layer adapted to be shrunk, an inner body comprising vertical supports and horizontal climbing bars, associated with said vertical supports by slip joints, whereby said inner body may be put into compression by shrinking said outer layer to prevent disengagement at said slip joints.

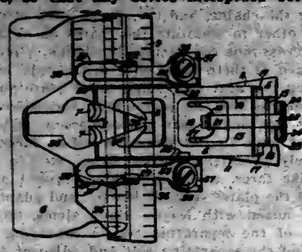
1,488,245. CLIMBING STRUCTURE. SEBASTIAN HINTON, Winnetka, Ill., assignor to Junglegym, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1920. Serial No. 414,081. 4 Claims. (Cl. 46—69.)



1. A reticulated climbing structure for children, comprising supports, having sockets therein, wooden climbing bars extending in a plurality of directions and spaced

and arranged to permit climbing from one to another in a plurality of selective dimensions from points within

the structure, said bars fitting at their ends in said sockets, and means for preventing said bars from being withdrawn from the sockets.

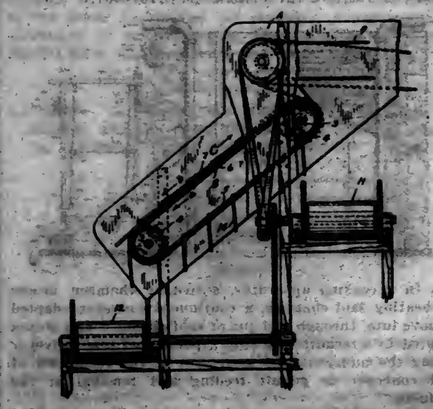


1,488,246. CLIMBING STRUCTURE. SEBASTIAN HINTON, Winnetka, Ill., assignor to Junglegym, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1921. Serial No. 509,870. 5 Claims. (Cl. 46—69.)

1. A playground apparatus comprising a series of uprights, a plurality of climbing elements arranged to cross each other and provide a multiplicity of adjoining cells, said uprights having bolt-holes extending therethrough, U-bolts passing through the uprights and clamping the climbing elements thereto.

1,488,247. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 26, 1922. Serial No. 590,647. 8 Claims. (Cl. 197—154.)

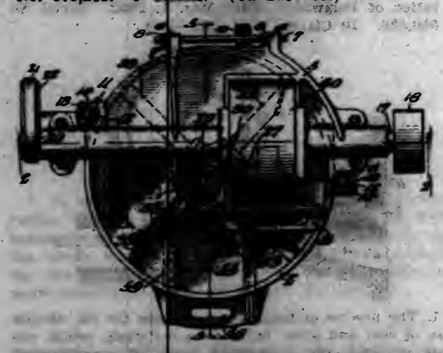
8. In a typewriting machine, the combination of a platen, a type bar center guide, and a ribbon vibrator mounted thereon, said vibrator being formed from a single piece of sheet metal with ribbon carrying arms, no portion of which is interposed between the platen and the type guide, so that any device interposed between the



ribbon carrying portion of the vibrator and the platen is prevented from interfering with the action of the vibrator.

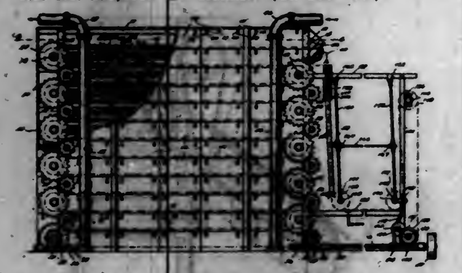
1,488,248. PROCESS AND APPARATUS FOR HEATING ROTARY KILNS. HANS HOLWARTH, Mulheim-on-the-Ruhr, Germany, assignor to Lignite Coal and By-Products Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Mar. 1, 1922. Serial No. 540,336. 10 Claims. (Cl. 263—34.)

1. The process of heating rotary kilns for the distillation of coal and other bituminous materials, which consists in producing combustion gases of comparatively high temperature, then mixing them with air of lower temperature, and then bringing the mixture thus cooled into contact with the kiln.



1,488,249. SEPARATOR. EMIL CLEMENS HORST, San Francisco, Calif. Filed Jan. 28, 1920. Serial No. 354,724. 1 Claim. (Cl. 130—30.)

An apparatus for separating hops from leaves, vines, stems, etc., comprising a pair of flexible endless link chains, said chains being separated and maintained in

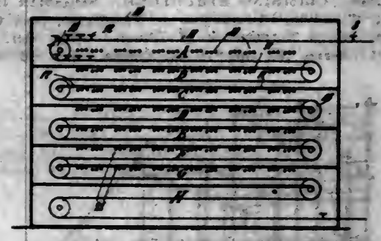


parallelism, an upper and a lower shaft, interspaced sprocket gears mounted on each shaft, said sprocket gears supporting the chains, and the shafts being mounted one above the other to maintain the chains on an angle, interspaced cross-rods connecting the chains, a plurality of plates hinged at their upper ends to the rods, each plate over-lapping the next succeeding lower plate and having such a thickness that the plates form successive step-like surfaces of less incline than the supporting chains, thereby allowing hops to roll down the offset faces, and simultaneously permitting leaves, stems, etc., to settle on the step-like faces, a conveyor belt disposed above the chains and the plates carried thereby, and adapted to deliver hops mixed with leaves, vines, stems, etc., to the upper end of the separating belt, a conveying belt disposed behind the separating belt and adjacent the upper end thereof to receive leaves, vines, etc., and a conveyor belt disposed below the separating belt and adapted to receive hops which roll off the plates carried by the separating belt.

1,488,250. CUTTING MACHINE. CHARLES W. HOFFMANN, Philadelphia, Pa. Filed Oct. 26, 1923. Serial No. 670,265. 9 Claims. (Cl. 146—79.)

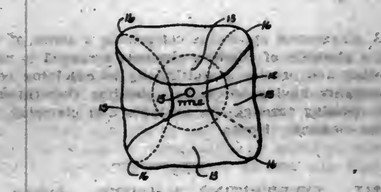
1. In a cutting machine, a stationary casing having a chamber, rotatably mounted knives extending into said chamber, means adapted to travel beneath said knives to effect the feed of the material to be cut, and means to actuate said knives.

1,488,251. BAKING OR COOKING APPARATUS. HENRY A. HOUSE, Bridgeport, Conn. Filed July 12, 1917. Serial No. 180,106. 27 Claims. (Cl. 107—57.)



5. In a cooking apparatus, a cooking chamber, means for heating said chamber, a continuous conveyor adapted to move into, through and out of said chamber, and means adapted to intermittently stop a portion of said conveyor during the uninterrupted movement of the remainder of said conveyor to permit feeding and removal of the products.

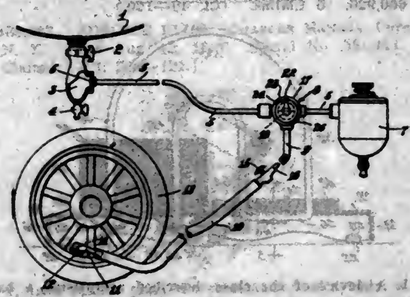
6. In a cooking apparatus, a continuous conveyor comprising a succession of trays, means for frictionally supporting said trays to permit ready removal and replacement of the trays, chain members pivotally carrying said supporting means, sprocket wheels at the bends of said chain members, and means rigidly connected to said supporting means for maintaining said trays in a horizontal position above the pivots of their supports irrespective of the direction of travel of said chain members, and curved guides adjacent the bends eccentric to said sprocket wheels.



21. In a cooking apparatus, a cooking chamber, means for heating said chamber, a continuous conveyor adapted to move into, through and out of said chamber, and means adapted to intermittently stop a portion of said conveyor during the uninterrupted movement of the remainder of said conveyor to permit feeding and removal of the products, said means comprising a track for a portion of said conveyor, a swinging frame, freely rotatable sprockets on said frame engaging said conveyor in spaced relation on said track, means for reciprocating said frame, and means for releasing said frame from said reciprocating means, to permit free manual swinging or stopping of said frame, the portion of said conveyor intermediate between said sprockets being adapted to be alternately fed forward and stopped and the portions of said conveyor at each side of said sprockets being moved forward continuously.

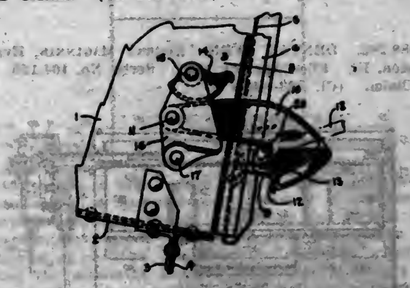
1,488,252. BAKING PROCESS. HENRY A. HOUSE, Bridgeport, Conn. Filed May 20, 1918, Serial No. 235,538. Renewed Nov. 17, 1923. 15 Claims. (Cl. 107—54.)

1. An improved baking process which consists in continuously moving the products to be baked, through a plurality of baking zones successively increasing in temperature, and thereafter subjecting the products to a relatively high temperature and for a comparatively short period of time to drive off the moisture.



1,488,253. REMADE PHONOGRAPH RECORD AND PROCESS OF PRESSING SAME. EDWIN HOWBRIGG, Belleville, N. J. Filed Mar. 20, 1922. Serial No. 545,026. 16 Claims. (Cl. 18—48.3.)

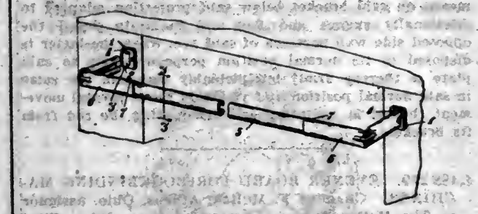
2. In the process of remaking phonograph records, the steps of heating the record to soften same, folding the record material inwardly from the periphery thereof, and pressing.



12. As a new article of manufacture, a remade phonograph record having an original record label embedded therein.

1,488,254. AUTOMOBILE ACCESSORY. BERNARD F. JOHNSON, Jersey City, N. J. Filed May 19, 1921. Serial No. 470,913. 5 Claims. (Cl. 137—70.)

5. An accessory for automobiles comprising a conduit device, at least a portion of which is flexible, a coupling element at one end for attaching the conduit device to a valve of a tire and holding the valve open during the attachment, a valve interposed in said conduit device, said device having at its other end a terminal permitting attachment to a liquid conveying pipe to be cleaned by the admission of the air of the tire to the pipe.



1,488,255. CAR-DOOR MECHANISM. BYERS W. KADEL, Baltimore, Md. Filed Feb. 21, 1923. Serial No. 620,410. 2 Claims. (Cl. 105—308.)

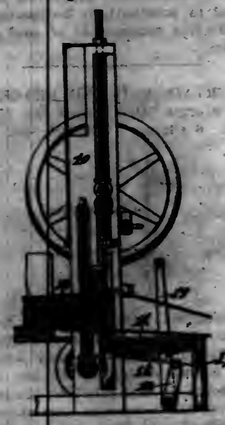
1. A car door mechanism including a door hinged to the car body, the same having a marginal flange outstanding from an edge of the door, a door-supporting hook pivoted to the side of the car and arranged to swing parallel with said marginal flange into supporting engagement with a portion of the door, said supporting hook having a door engaging ledge and being adapted to hold the door partly closed or fully closed, the said outstanding flange of the door having a notch in the vicinity of the hook ledge adapted to admit a removable door prying lever, operable between the said hook ledge and the door for forcing the door from a preliminary to a final position of closure.

1,488,256. CURTAIN FIXTURE. CHARLES W. KIRSCH, Sturgis, Mich. Filed Nov. 23, 1922. Serial No. 602,904. 8 Claims. (Cl. 156—19.)

3. A curtain fixture comprising a rod having a middle portion adapted to extend substantially parallel with a window casing or the like, and two end-portions extending substantially perpendicularly to said middle portion, said end-portions hollow and open at their free ends, a pair of supporting brackets adapted to be secured to the window-casing, the said brackets and free ends of the rod equipped with inter-engaging formations disposed at substantially the highest point in each for effecting attachment of the rod with said brackets, the latter presenting parts below the level of said formations against which the free ends of the rod abut and coact with said formations to support said end-portions of said rod in horizontal position, said rod and brackets equipped with yielding inter-engaging means below said formations coacting to firmly hold the end-portions of the rod against free movement relatively to the bracket in any direction and permitting engagement of one free end of the rod with one of said brackets while the other free end remains disengaged from its bracket and supporting the middle portion of the rod in substantially horizontal position preparatory to effecting engagement of said other free end with its bracket.

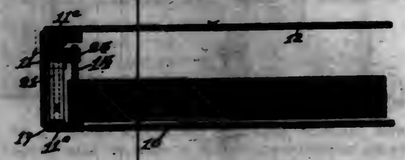
1,488,257. CURTAIN ROD AND BRACKET. CHARLES W. KIRSCH, Sturgis, Mich. Filed Jan. 27, 1923. Serial No. 615,223. 6 Claims. (Cl. 156—22.)

2. The combination with a curtain rod member including an arm adapted to be normally supported to project horizontally outwardly from and perpendicularly to the face of a window-casing or the like, said arm open at the end opposed to said face and having perforations in the uppermost and lowermost portions of its wall, respectively, adjacent said open end, a supporting device for said arm including a surface portion against which the open end of said arm is adapted to abut when in its normal position, a hook element adapted to engage in the upper perforation for supporting said arm and maintaining it normally abutted against said surface portion, said arm pivotally movable on said hook element in a vertical plane relatively to the said device through an arc upwardly from its normal position, and a projection adapted to enter the open end of said arm and engage in the lower perforation for yieldably resisting pivotal movement of said arm and preventing disengagement thereof from said hook when in its normal position.



1,488,258. CURTAIN-ROD BRACKET. CHARLES W. KIRSCH, Sturgis, Mich. Filed Jan. 27, 1923. Serial No. 615,224. 1 Claim. (Cl. 156—22.)

A curtain-rod bracket for substantially tubular rods terminating in substantially parallel open ended arms each provided adjacent its open end and in its uppermost wall portion with a perforation, said bracket including a wall-plate, a hook projecting therefrom for engaging in said perforation for supporting the rod and preventing movement thereof away from the said wall

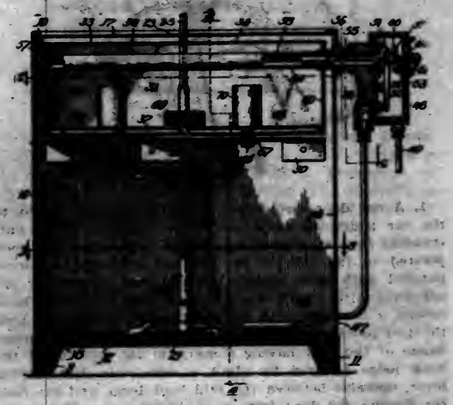


plate, the open end of the arm below said perforated wall portion adapted to bear upon said plate to thereby coact with said projection and perforation to normally maintain said arm disposed perpendicularly to said plate, said arm adapted to be pivotally swung on said projection in one direction to effect disengagement therefrom, and means on said bracket below said projection adapted to frictionally engage and flex and maintain flexed the opposed side wall portions of said arm when the latter is disposed in its normal position perpendicularly to said plate to thereby firmly but yieldably maintain the same in said normal position and yieldably resist pivotal movement thereof in mounting and demounting the rod from its brackets.

1,488,259. EVENER BOARD FOR BOOKBINDING MACHINES. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Company, Athens, Ohio. Filed Dec. 30, 1918. Serial No. 269,009. 2 Claims. (Cl. 11—1.)

1. In a book binding machine a device for evening the papers to be bound, comprising an evener board mounted to the standards of the machine; means to position and retain the evener board in a substantially vertical plane and in advance of the standards of the machine; means to lower the evener board from the substantially vertical position to a substantial horizontal position projecting forwardly from the standards of the machine; means to retain the evener board in the said substantially horizontal position, substantially as shown and described.

1,488,260. LOOSE-LEAF FILE. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Company, Athens, Ohio. Filed Dec. 30, 1918. Serial No. 269,011. 5 Claims. (Cl. 129—7.)



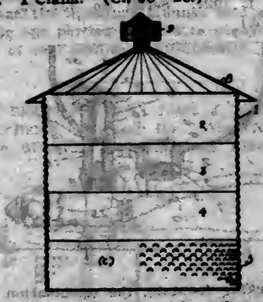
1. A combination paper file and punch, comprising a base with upright posts therein, said posts adapted to operate as punches; a carrier plate secured to the file and mounted for upward and downward movement and provided with orifices to receive the punch posts; an upper cover means to lock the upper cover of the file to the carrier plate; a back connecting the base and upper cover, substantially as shown and described.

1,488,261. CALENDAR STAND. EZRA T. MACINTYRE, Rye, N. Y., assignor to Defiance Sales Corporation, New York, N. Y. Filed Oct. 6, 1923. Serial No. 666,920. 5 Claims. (Cl. 40—120.)

1. A device of the class described comprising a base, an arch having all its uprights in the same plane, two of said uprights being united by a straight bridge portion and at least one of said uprights being notched near one end, a lip on the underside of said base extending below said bridge portion to prevent vertical displacement of the arch; said base having offset notches in juxtaposition to said lip forming seats for holding the uprights adjacent said bridge portion against horizontal displacement, said base also being perforated to receive the other uprights, and a rigid member secured to and spaced away from the underside of said base for receiving at least one of the last named uprights and adapted to prevent the arch from rocking in a direction transverse to its vertical plane.

1,488,262. DENTAL OVEN. EUGENE MACINNIS, Evanston, Ill. Filed Apr. 25, 1921. Serial No. 464,150. 1 Claim. (Cl. 263—42.)

An oven of the character described, comprising in combination, a housing having apertured top and bottom walls, legs supporting said housing, the front wall of said housing having upper and lower doorways and doors therefor, a gas-burner supported on said bottom wall, a horizontal partition-wall in said housing between said doorways leaving a space between itself and the end and back walls of said housing, a chamber above said partition-wall having its top, rear, and end walls spaced inwardly from the corresponding walls of said housing and its bottom wall spaced above said partition-wall, the top wall of said chamber being apertured for ventilation, the lower door of said housing affording access to the compartment containing the gas-burner, the upper door affording access to said chamber, a heat deflector secured below said partition-wall above said burner, a deck plate in said chamber having downturned marginal flanges

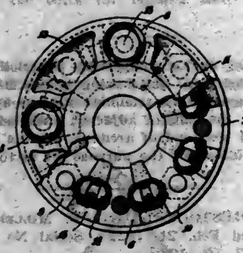


resting on the bottom wall thereof, a thermostat in said chamber, a gas pipe connection with said burner, and a valve in said connection controlled by said thermostat.

1,488,263. FUSIBLE PLUG. CHARLES MANDRA, Corona, N. Y. Filed Aug. 12, 1922. Serial No. 581,411. 7 Claims. (Cl. 200—121.)

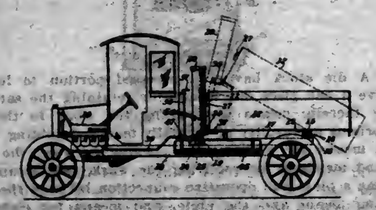
1. In a fusible plug, the combination of a body, a lid, a lock and a fusible element, and means to open automatically the lid when the said fusible element is burned out.

1,488,264. CRIB OR THE LIKE. ROYAL E. MARTIN, Mansfield, Ohio. Filed Nov. 10, 1921. Serial No. 514,270. 1 Claim. (Cl. 98—26.)



In a crib, a base formed with a channel open to the atmosphere, a slatted support arranged on the base, a crib bottom arranged on the support and formed with perforations, a crib wall rising from the bottom and formed at sections, the lower section being perforated and the remaining sections being imperforated, a top arranged on the upper end of the wall and a ventilator opening through the top directly into the crib at the top, whereby air may be drawn through the crib bottom and lower wall section and caused to circulate through the material in the crib and through the ventilator through natural draft.

1,488,265. INFLATABLE COVER FOR LAMPS AND THE LIKE. ICHIRO N. MATSUO, Chicago, Ill. Filed June 7, 1923. Serial No. 643,940. 2 Claims. (Cl. 240—108.)



1. A device of the class described, consisting of an inflatable bag-like body made of elastic material and having an elastic reinforced neck adapted for the insertion of a lamp through the same into the body and to engage the neck of the lamp, the said body also being provided with a flexible tube for inflating the same.

1,488,266. COUPLING. WILLIAM F. MELLEN, Cranford, N. J., assignor to Rubber Insulated Metals Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 13, 1923. Serial No. 612,478. 7 Claims. (Cl. 64—96.)

1. A coupling comprising a pair of oppositely disposed members adapted to be carried by the shafts to be coupled, a pivotally mounted tooth on each of said members, a push pin extending between the teeth and a rubber septum interposed therebetween.

1,488,267. PRESSURE DUMPING HOIST. JOHN M. MEYERS, Pittsburgh, Pa. Filed Mar. 30, 1922. Serial No. 548,211. 18 Claims. (Cl. 298—22.)

1. In a truck having a dump body mounted thereon, the combination therewith of means for actuating the dump body, comprising a member connected with the truck to oscillate thereon and carrying a plunger, and a pressure chamber adapted to receive said plunger member and have reciprocating movement thereon, and means connecting said pressure chamber to the dump body.

1,488,268. RECEPTACLE. FRANK M. MISLKE, Duluth, Minn. Filed May 1, 1922. Serial No. 557,574. 2 Claims. (Cl. 43—31.)

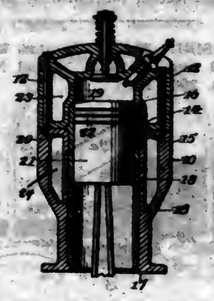
1. A leader receptacle comprising in combination two screw threadedly united cylindrical members, the circumferential walls of the body portions of said members being spaced one from the other forming an inner annular space approximately the depth of the box intermediate thereof, two absorbent discs slightly smaller than the interior of the larger or female member of the receptacle and of sufficient thickness to be forcibly held together about the circumferential edges by the impinging of the male member of the receptacle when the latter is assembled, thus forming a leader receiving space intermediate of the discs which is tightly sealed circumferentially.

1,488,269. ANTISKID DEVICE. ALEXANDER R. MIESSJEWSKI, Chicago, Ill. Filed Nov. 13, 1922. Serial No. 600,536. 1 Claim. (Cl. 152—14.)

An anti-skid device comprising a series of pivotally connected links, each link having lateral flanges and an intermediate aperture surrounded by an enclosing grand gripping wall, the ends of adjacent links being connected by a returned bent end of arcuate form on one engaging a slot in the other for the purpose set forth.

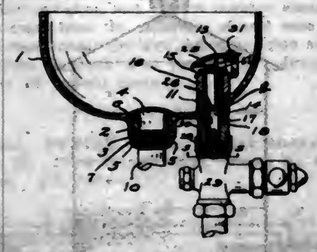
1,488,270. DIESTOCK. DAVID B. MILLER, Greenfield, Mass. Filed Feb. 21, 1922. Serial No. 538,284. 7 Claims. (Cl. 10—123.)

3. A die stock having a recessed portion to loosely receive a one piece die, means for retaining the same in place therein, means for guiding the work to the die comprising a plurality of pivotally mounted guiding members, means for varying the opening between the said pivoted members for receiving the work, said means including a plate and operative connection between the said guiding means and the plate, and means for clamping the guiding means and the die in the stock.



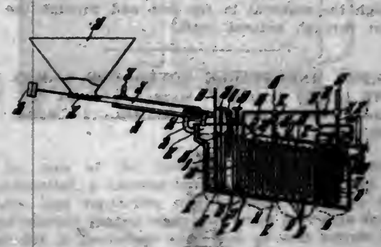
1,488,271. HEXAGONAL DIE. DAVID B. MILLER, Greenfield, Mass. Filed Feb. 21, 1922. Serial No. 538,285. 7 Claims. (Cl. 76—101.)

1. The method of forming the lands of a screw cutting die from a hexagonal blank which consists in first forming a plurality of openings through the blank, then passing a broach through the openings to space and form the lands and their cutting faces.



1,488,272. REMOVABLE ENGINE-CYLINDER LINING. FRED E. MILNER, Markle, Ind. Filed Feb. 20, 1921. Serial No. 447,973. 1 Claim. (Cl. 74—108.)

The combination with an engine cylinder having a beveled shoulder at its upper end and an inwardly directed flange at its lower end, the inner face of which is beveled, of a removable lining therefor comprising a cylindrical open-ended body having its lower end outwardly beveled with the said beveled portion resting upon

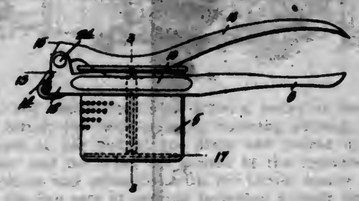


the said flange, and having a V-shaped supporting rib circumscribing its outer wall adjacent the upper end of the cylinder.

1,488,273. DRINKING FOUNTAIN. CHARLES B. MORTIMER, Cleveland, Ohio, assignor to The Central Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 1, 1921. Serial No. 457,732. 5 Claims. (Cl. 290—12.)

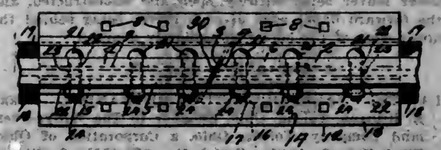
1. In a drinking fountain, the combination of a stationary jet orifice member adapted to project a fluid stream upwardly, a hood normally positioned over the orifice of said jet member, a passage leading to the jet, and hydraulically operated means for raising said hood, within said passage.

1,488,274. ART OF MAKING VARNISH. ALEXANDER MURRAY, Springfield, Mass. Filed Aug. 12, 1921. Serial No. 491,772. 36 Claims. (Cl. 134—26.)



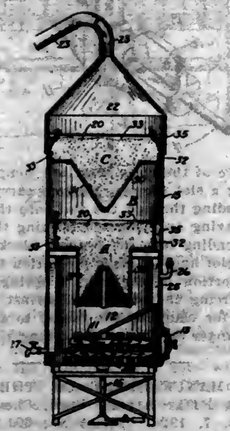
36. An apparatus for the manufacture of varnish, comprising a cooking vessel constructed and arranged to provide an elongated tortuous passage therethrough, means for introducing melted resin together with a neutralizing agent into one end of said passage, means for introducing a drying oil at a point further advanced in said passage, a heating jacket around the portion of said passage between the points of introduction of the resin and the oil, the second heating jacket around said passage beyond the first jacket, a source of heat, a flue for conducting heat from said source to the second jacket, means for regulating the supply of heat to the second jacket, a flue for conducting surplus heat from the second jacket to the first jacket, an auxiliary flue leading directly from the source of heat to the first jacket, an exhaust flue leading from the first jacket, a by-pass from the auxiliary flue to the exhaust flue, a valve in said by-pass, and a thermostat projecting into a portion of the cooking passage heated by the first jacket and connected to regulate said valve to control the supply of heat delivered by the auxiliary flue to the first jacket.

1,488,275. ELECTROMAGNET. NILS E. NORSTROM, Chicago, Ill., assignor to N. E. Norstrom Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1920. Serial No. 405,511. 5 Claims. (Cl. 175—345.)



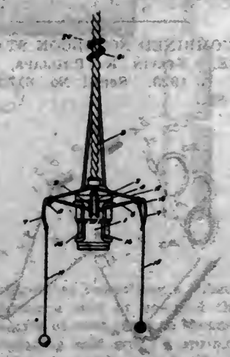
3. An electro-magnet provided with an armature formed of assembled relatively movable lamina, in combination with an armature adjusting element adapted to successively engage the armature lamina, said adjusting element having one portion adapted to engage and actuate a plurality of said lamina simultaneously.

1,488,276. FRUIT PRESS. JOHN J. O'BRIEN and J HARRY O'BRIEN, Chicago, Ill. Filed Nov. 5, 1923. Serial No. 672,872. 3 Claims. (Cl. 146—176.)



1. In a device of the character described, a circular supporting member, a handle formed integral therewith, a body portion removably mounted in the supporting member, a handle having pivotal connection with the supporting member, flanges forming a part of the last mentioned handle, said flanges having openings, a follower including a pair of spaced arms, adapted to move into the body portion, fingers formed at the upper ends of the arms and adapted to be positioned in the openings of the flanges to secure the follower to the pivoted handle member, and means for restricting movement of the follower with respect to the body portion.

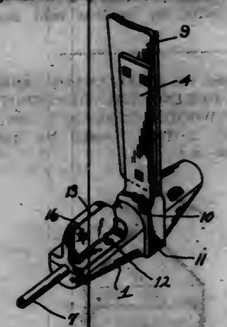
1,488,277. RAIL JOINT. ROBERT E. OSBORNE, Hamburg, N. Y. Filed Sept. 21, 1921. Serial No. 502,183. 1 Claim. (Cl. 238—262.)



A rail joint comprising a fish plate engaging one side of a rail, said fish plate being provided with a horizontally disposed plate underlying and engaging the under side of the rail and extending beyond the opposite side of the rail, the outer end of said horizontally disposed plate terminating in a vertically disposed flange having its inner side in a vertical plane and in parallel relaton to the rail, a fish plate engaging the other side of the rail and having its outer edge in abutting engagement with the inner side of the flange and disposed between said flange and the adjacent side of the rail, a longitudinally disposed rib carried by the last named fish plate, bolts extending through the fish plates and rail above said rib and wedge shaped members wedged between the rib and the nuts of the bolts for holding said nuts against rotation.

1,488,278. PROCESS OF RECOVERING GASES WHICH ARE FORMED DURING THE DESTRUCTIVE DISTILLATION OF WOOD. CLARENCE F. OTT, Whittier, Calif. Filed Feb. 2, 1921. Serial No. 441,837. 14 Claims. (Cl. 203—6.)

1. In the treatment of gases resulting from the process of destructive distillation volatilizing white oak billets in an enclosed chamber, then subjecting the derived vapors to oxidation and then condensing the oxidized vapors.

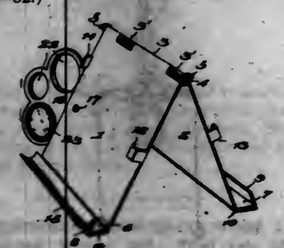


1,488,279. KEY-SOCKET-OPERATING ATTACHMENT. ROBERT J. OWENS, Birmingham, Ala. Filed Nov. 19, 1920. Serial No. 425,249. 5 Claims. (Cl. 240—123.)

1. A pull cord attachment for operating key socket switches, comprising a double lever attachment having means at its center to mount it on the key, a downward projection at one end of the lever struck on a curve substantially concentric with the key, a pull cord attached

to the lower end of said extension at a point substantially below the line of the socket key, and a pull cord attached at the other end of the lever at a point substantially level with the socket key.

1,488,280. MOTOR-VEHICLE SIGNAL. OSCAR B. PERKINS, Grand Ledge, Mich. Filed Sept. 11, 1923. Serial No. 662,131. 2 Claims. (Cl. 116—52.)



1. A device of the class described comprising a bearing block having a slot therein, a signal carrying arm having a part extending through the slot into the bearing block, said part having an elongated opening therein, a handle member extending into the bearing block through a portion of the slot and having a projection thereon engaging the other portion of the slot, a spring in the bearing block for forcing the projection against one wall of the slot, means for clamping the casing to a part of the vehicle and flanges on the arm engaging the bearing block.

1,488,281. MANUFACTURE OF THREADS, FILMS, RIBBONS, ETC. ALFRED PEEL, Chemnitz, Germany. Filed Feb. 7, 1924. Serial No. 691,275. 4 Claims. (Cl. 18—54.)

1. The process of producing threads, films, ribbons, etc., from viscose solutions, which comprises introducing the viscose solution into an acid precipitating bath containing carbohydrates produced by the saccharification of ivory nut shells or shells of similar fruit.

3. The method of producing a precipitating bath for viscose solutions which comprises subjecting ivory nut shells or shells of similar fruit to saccharification with an acid, filtering the resulting solution and adjusting the carbohydrate content of the solution to about 10 to 30 per cent.

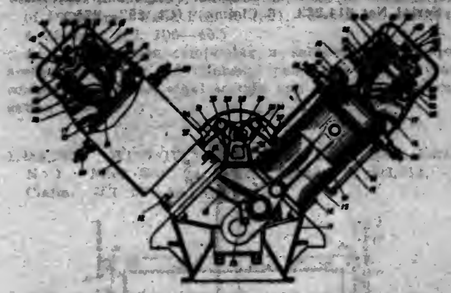
1,488,282. COMBINED NOTEBOOK STAND AND VANITY CASE. KELVIN R. PHILLIPS, Prescott, Ariz. Filed Feb. 6, 1923. Serial No. 617,375. 5 Claims. (Cl. 132—82.)

1. The combination of a pair of members hinged together at one end whereby the same may be moved apart to provide an inclined support, and a vanity case movably mounted on one of said members and normally concealed and covered by the same.

1,488,283. STORAGE SYSTEM. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1921. Serial No. 441,242. 3 Claims. (Cl. 214—10.)

1. The combination of a bin; a piling floor, and inclined structure extending from the top of the bin to the piling floor; means for distributing material on the piling floor; a conveyer above the bin; and means for discharging material carried by the conveyer into the bin or onto the inclined structure.

1,488,284. HEADLIGHT RAY DEFLECTOR. CHARLES W. RENNER, Altoona, Pa., assignor of one-half to Joseph J. Nagle, Philadelphia, Pa. Filed June 9, 1920. Serial No. 387,526. 1 Claim. (Cl. 240—48.4.)

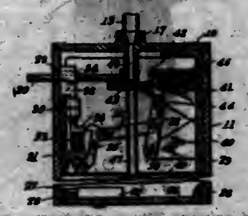


In a headlight ray deflector, an annular frame, and a plurality of crescent shaped forwardly and downwardly inclined louvers located in the upper portion only of said frame, and projecting forwardly therefrom and having their outer terminals attached to the curved side walls of said frame, the reflecting area of each louver decreasing downwardly from the upper to the lowest louver, the rear curved edge of the upper louver being secured to the upper inner periphery of said frame, and the lower louver having its outer ends secured to said frame on about the horizontal median line of said frame, the space between each of said louvers and below the lower louver being entirely open and unobstructed, and the forward upper edge of each louver being behind the upper edge of the louver immediately above it.

1,488,285. VALVE-OPERATING MECHANISM. HARRY E. RHOADS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 6, 1919. Serial No. 275,466. 6 Claims. (Cl. 123—55.)

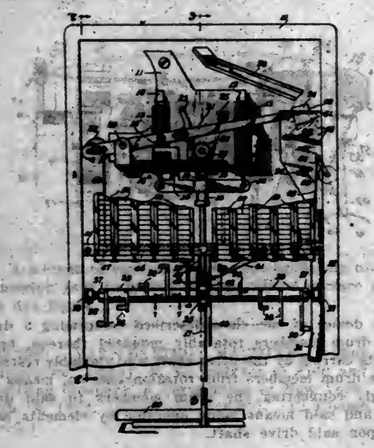
5. In an internal combustion engine, intake and exhaust valves, common means operative in opposite directions for opening said valves alternately, an engine driven shaft, a cam thereon, said means carrying a pair

of contact arms rigid with respect to each other arranged to be engaged one at a time by said cam for



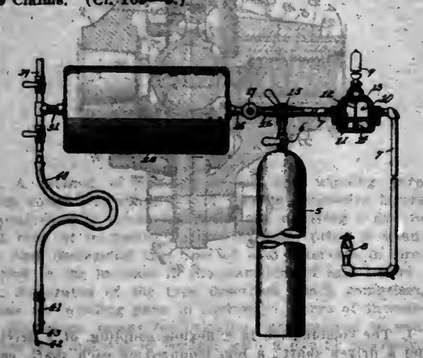
actuating said valve opening means and to remain out of contact with said cam during a portion of each revolution of said shaft.

1,488,286. ELECTRIC HOIST. PAUL C. RICHTER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed May 27, 1921. Serial No. 473,019. 17 Claims. (Cl. 254—168.)



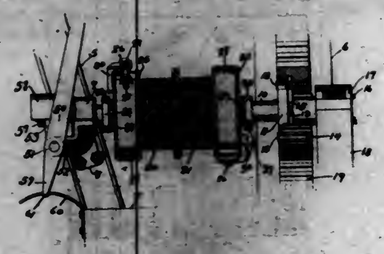
1. The combination of a drum, a motor at one end of the latter, two sets of speed reducing gearing, one set located at one end of the drum and geared up to the motor, and the other set located at the opposite end of the drum and connected with the latter, means connecting the two sets of gearing including a shaft and a mechanical brake and clutch mechanism actuated by the shaft for transmitting motion to the second set of speed reducing gearing and also for retarding the rotation of the drum during the lowering movement of the latter.

1,488,287. COIN BOX FOR COIN-CONTROLLED MECHANISMS. ALBERT B. ROTH, Brooklyn, N. Y., assignor, by mesne assignments, to William N. Fleischmann, New York, N. Y. Filed Apr. 3, 1923. Serial No. 629,560. 3 Claims. (Cl. 232—15.)



3. A coin box having a coin chute entering therein, a slidable member adjacent thereto and adapted to close said chute, means for operating said slidable member to open said chute and means controlled by said slidable member, for preventing the introduction of said operating means for said slidable member.

1,488,288. COMBINED VENDING AND WEIGHING MACHINE. ALBERT B. ROTH, Brooklyn, N. Y. Filed July 31, 1923. Serial No. 654,812. 19 Claims. (Cl. 194—2.)



1. In a coin-operated combined vending and weighing machine, in combination, a scale platform, a weight registering member operated by a coin and controlled by the movement of the platform, a commodity receptacle, commodity delivery means, means whereby the delivery means is locked from movement until the insertion of a coin, means whereby the insertion of a coin will unlock the delivery means and means whereby the removal of a weight from the platform will remove a commodity from the commodity receptacle.

1,488,289. FIRE EXTINGUISHER. WILLIAM J. RUFF, Quincy, Ill. Filed Sept. 22, 1919. Serial No. 325,306. 9 Claims. (Cl. 169—9.)

1. A fire extinguisher comprising a substantially cylindrical tank having a seat at one end thereof; a pipe pivoted at the axis of said tank; a member at one end of said pipe engaging said seat; a spring engaging the other end of the pipe and tank holding said member against said seat forming a fluid-tight joint; and hollow weights extending laterally from said pipe and having openings therethrough extending from the interior of said pipe to adjacent the inner wall of the tank at the ends of the latter.

1,488,290. MATERIAL-HANDLING MACHINE. ADOLPH W. RYBECK, Milwaukee, Wis., assignor to T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 13, 1922. Serial No. 574,784. 6 Claims. (Cl. 254—185.)

1. A device of the class described comprising a drive shaft, drum members rotatably mounted thereon, brake elements carried by the drive shaft and yieldably restraining the drum members from rotation thereon, means for drivingly connecting the drum members to said drive shaft, and said means being operable by elements movable upon said drive shaft.

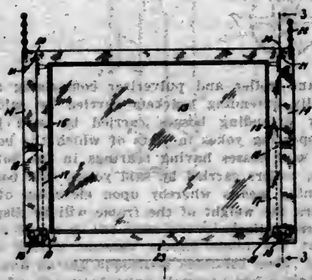
1,488,291. CENTERING DEVICE FOR FLEXIBLE COUPLINGS. CARL A. SCHELL, Cleveland, Ohio, assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed Oct. 28, 1920. Serial No. 420,107. 4 Claims. (Cl. 64—66.)

1. The combination in a flexible coupling, of a driving and a driven shaft; a hub mounted on each shaft, each hub having arms; a disk secured to the arms of the two hubs and forming a flexible coupling between the two shafts, one of said shafts being hollow; a bushing located within the shaft; a plunger mounted in the bushing and having a ball at its outer end located in a central position in respect to the two shafts; a plate having a half socket in which the ball is mounted and having arms extending in a line with the arms of one of the hubs; bolts securing the disks to said arms, said bolts passing through openings in the arms of the plate; and a cap secured to the plate and forming a continuation of the socket.

1,488,292. ADJUSTABLE STAY FOR DOORS, WINDOWS, FANLIGHTS, AND THE LIKE. WILLIAM SCHOFIELD, London, England. Filed Jan. 22, 1923. Serial No. 614,233. 3 Claims. (Cl. 292—275.)

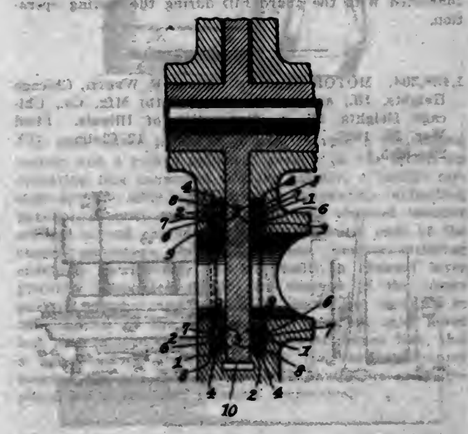
3. An adjustable stay of the kind described, comprising a tubular body adapted for attachment by a bracket, a central rod slidable therein and also adapted for attachment by a bracket, an automatically acting friction grip between the body and the rod at the one end of said body and which can be adjusted as to the amount of its grip, a cap nut applied to the other end of said body, and a tubular connector disposed within the body to surround the rod and adapted for operation between the cap nut and the friction grip, substantially as described.

1,488,293. METHOD OF AND DEVICE FOR FINISHING TEXTILE ARTICLES. FRITZ SCHUSTER, Chemnitz, Germany. Filed June 1, 1922. Serial No. 565,120. 3 Claims. (Cl. 223—17.)



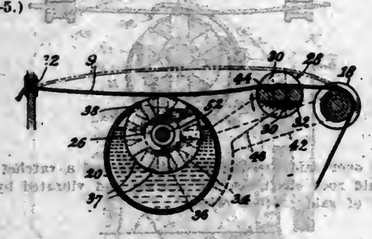
1. The method of making heating units for glove and stocking formers and molds, comprising grooving a sheet metal plate coating the groove with an insulating substance, heating said plate to bake said coating, loosely placing a thin resistance wire in said coated groove and covering said wire with insulating substance.

1,488,294. CELLULOSE-ACETATE FILM. VIRGIL B. SEASE, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Dela., a Corporation of Delaware. Filed Feb. 3, 1921. Serial No. 442,274. 4 Claims. (Cl. 106—40.)



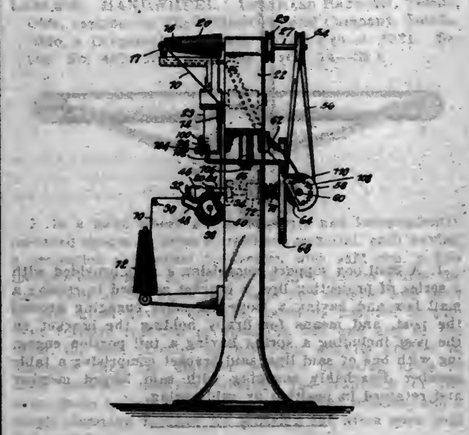
4. A composition comprising a solution of cellulose acetate, triacetin, and triphenyl phosphate in a solvent comprising acetone, ethyl acetate and an acetone-condensation product.

1,488,295. WINDOW. ALEXANDER SORG, New York, N. Y. Filed Nov. 24, 1922. Serial No. 603,014. 1 Claim. (Cl. 20—49.)



The combination with a window-sash having a longitudinal groove in each of its stiles extending from approximately its middle portion to adjacent its lower end, of a vertical rail abutting against each of said stiles, a horizontal pivot pin on each vertical rail projecting into the groove of the juxtaposed stile, and means for securing said sash and rails in parallel relation.

1,488,296. PACKING RING. HARRY P. STEVENS, New York, N. Y., assignor to Stevens Motors, Inc., New York, N. Y., a Corporation of New York. Original application filed July 8, 1919, Serial No. 309,327. Divided and this application filed Dec. 10, 1919. Serial No. 343,899. 11 Claims. (Cl. 286—7.)



1. A packing comprising, a stiff annular bearing ring, and a second resilient annular ring, substantially parallel with and spaced therefrom, said rings having parts which telescope with each other at adjacent margins so as to form a fluid tight joint between them, the resiliency of said second ring being adapted to maintain said bearing ring in position on its opposed bearing surface under spring pressure.

1,488,297. YARN-DYEING MACHINE. GEORGE T. THOMAYER, Albany, N. Y., assignor to Fuld and Hatch Knitting Company, a Corporation of New York. Filed Sept. 30, 1922. Serial No. 591,475. 16 Claims. (Cl. 8—5.)

1. A method of random dyeing yarn by lightly touching the moving yarn in spaced sections with a surface wetted with dye liquor.

1,488,298. YARN-DYEING MACHINE. GEORGE T. THOMAYER, Albany, N. Y., assignor to Fuld and Hatch Knitting Company, a Corporation of New York. Filed Feb. 5, 1923. Serial No. 616,901. 12 Claims. (Cl. 8—5.)

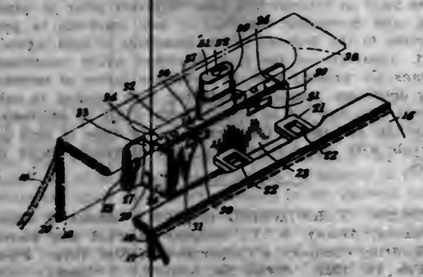
1. A method of random dyeing and winding yarn which comprises, winding said yarn in successive layers of progressively increasing diameters, applying a dye to said yarn at intermittent time intervals prior to winding, and decreasing the time of said intervals in proportion to the increase in the diameters of said layers.

4. Apparatus of the type described which comprises, means for winding yarn in successive layers of increasing diameters, means for bringing yarn passing to said layers into and out of contact with a dye at successive intervals and means for decreasing the time of said intervals with the formation of each successive layer of yarn.

1,488,299. YARN-DYEING DEVICE. GEORGE T. THOMAYER, Albany, N. Y., assignor to Fuld and Hatch Knitting Company, a Corporation of New York. Filed Feb. 15, 1923. Serial No. 619,097. 7 Claims. (Cl. 8—5.)

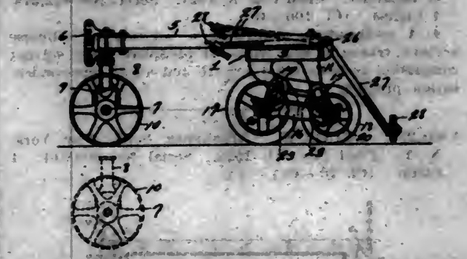
1. A device of the type described which comprises, a dye tank, a shaft extending through said tank, dye applying wheels on said shaft, a toothed wheel on said

shaft, a rock shaft mounted on the outer surface of said tank, yarn guiding fingers extending from said rock



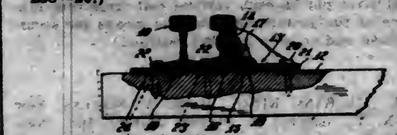
shaft over said dye applying wheels and a ratchet arm on said rock shaft bearing against and vibrated by the teeth of said toothed wheel.

1,488,300. POST AND BRACKET FOR MAIL BOXES. SAMUEL H. THOMPSON, Collbran, Ala. Filed Jan. 23, 1923. Serial No. 614,449. 4 Claims. (Cl. 232—40.)



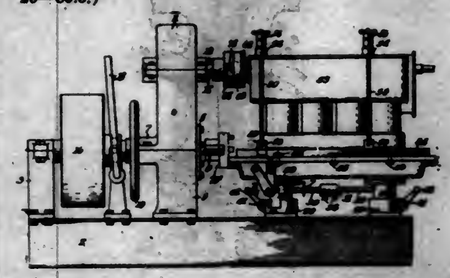
1. A mail box support comprising a post provided with a series of projecting lips, a bracket adapted to receive a mail box and having a looped member engaging around the post, and means for firmly holding the bracket on the post including a spring having a tail portion engaging with one of said lips, said bracket comprising a table member detachably engaging with said looped member and retained in position by said spring.

1,488,301. BAG-FRAME LOCK. HUGO TUECKMANTEL, Newark, N. J., assignor to The T & L Co. Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 5, 1923. Serial No. 629,997. 9 Claims. (Cl. 70—2.)



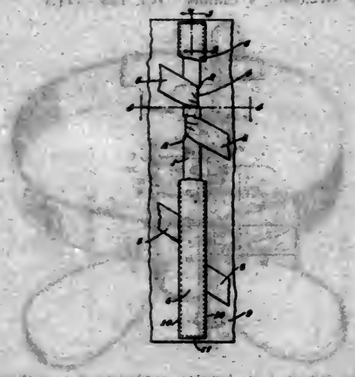
1. A bag frame lock casing having an apertured front wall adapted to receive a keeper, and an outwardly curved flange on said front wall adapted to guide a keeper into the mentioned aperture.

1,488,302. LAND ROLLER AND PULVERIZER. JOSEPH F. WAGNER, South Bend, Ind. Filed Apr. 27, 1922. Serial No. 556,896. 5 Claims. (Cl. 55—21.)



1. A land roller and pulverizer comprising a frame, downwardly extending brackets carried by said frame, outwardly extending bosses carried by said brackets, roller supporting yokes in slots of which the bosses are disposed, said bosses having bearings in the bottoms of said slots, rollers carried by said yokes, said bosses and slots forming means whereby upon elevation of one of said rollers the weight of the frame will be disposed on the elevated roller.

1,488,303. GUARD-RAIL BRACE. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1921. Serial No. 495,385. 19 Claims. (Cl. 238—20.)



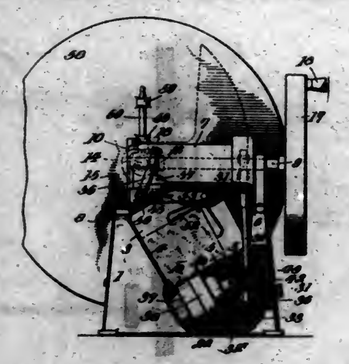
1. A guard rail brace comprising a casting formed with a base portion adapted to be secured to a cross tie and provided with an integral abutment which is rigidly connected with the guard rail during the casting operation.

1,488,304. MOTOR STAND. GEORGE F. WERTH, Chicago Heights, Ill., assignor to Canedy-Otto Mfg. Co., Chicago Heights, Ill., a Corporation of Illinois. Filed Mar. 25, 1921. Serial No. 455,386. 12 Claims. (Cl. 29—89.5.)

1. In a device of the class described, the combination of a frame having a pan mounted thereon for supporting a motor, a pair of laterally separable members mounted respectively on the opposite sides of the pan, clamps for securing the motor on said members, and driving mechanism on the frame including coupling means at one end of the pan adapted to be connected with the crank shaft of a motor mounted on said members.

1,488,305. STEEL FOR CORSETS OR BELTS. JOHN U. ADAMS, Cincinnati, Ohio. Filed Sept. 8, 1921. Serial No. 499,134. 2 Claims. (Cl. 2—76.)

1. In a device of the class described, a reinforcing element; a flexible member wound about the reinforcing element and having oppositely extended ends; a body; a covering for the reinforcing element; and a single means for securing both the covering and the ends of the flexible member to the body along the longitudinal edges of the reinforcing element.



1,488,306. FLOUR SIFTER. ROSS ADAMS, Tacoma, Wash., assignor, by mesne assignments, to Meetz-A-Need Manufacturing Co., a Corporation. Filed Apr. 12, 1923. Serial No. 631,617. 1 Claim. (Cl. 83—30.)

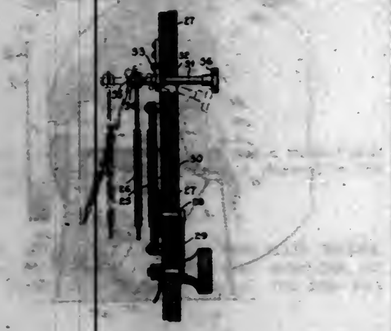
A flour sifter including a body having a reticulated bottom and a rotary agitator operable on the latter, an operating link connected with the agitaor, a handle carried by the body and including outwardly extending parallel channel members, a vertical channel member secured to and extending between the outer ends of the channel members, the said vertical member inclining curvingly downwardly and outwardly, a channel lever pivotally suspended within the channel of the upper parallel member and having its lower end movable in the channel of the lower parallel member, said lower end beng connected with the before-mentioned link, and a bowed spring disposed between the vertical channel member and the channel lever and having its arms disposed within the said members respectively.

1,488,307. CONTINUOUS BREAD SLICER. MORTIMER R. ANSTICE and GEORGE EDGAR HAZARD, Rochester, N. Y., assignors to Josiah Anstice & Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 14, 1922. Serial No. 588,173. 13 Claims. (Cl. 146—110.)

6. A slicing machine comprising a base, a traveling belt in one wall of the base, a driving shaft extending transversely of the base and above it, a knife intermittently moving across the end of the base and operated

by the driving shaft, and means connected with the driving shaft for intermittently moving the belt when the knife has passed the end of the base.

1,488,308. HANDWHEEL. LEONHARD BAUROTH, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 3, 1921. Serial No. 442,227. 6 Claims. (Cl. 74—33.)

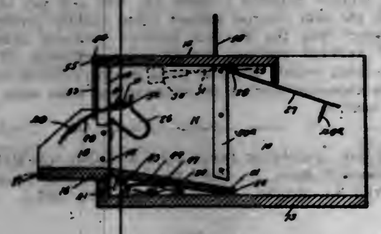


1. In a hand wheel, a rim, separate and independently mounted spokes or arms of resilient material, each having a projection and socket connection with said rim, a hub member comprising an exterior surface against which the inner ends of the arms bear, said hub member and each of said arms having engaging portions adapted to prevent relative rotation between the hub and any of the arms, the said exterior surface being slightly greater in diameter than the distance between opposing arms in their unflexed position, whereby the resilience of the arms tends to hold all these parts in fixed relation, and a single clamping member for securing the arms upon said hub member.

1,488,309. PRESSER FOOT FOR SEWING MACHINES. MORRIS J. BERG, St. Paul, Minn. Filed Jan. 30, 1922. Serial No. 532,688. 4 Claims. (Cl. 112—257.)

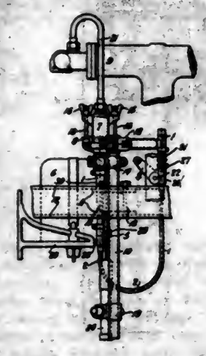
1. In a foot for a sewing machine, a shank adapted to be secured to the machine, a prong mounted on the lower end of said shank, a pin pivotally joining said prong and shank, said prong being formed with an aperture adapted to receive a tongue on an attachment for the foot, a lever tiltably mounted on said pin and an eccentric surface arranged on said lever to partially close said aperture when said lever is tilted.

1,488,310. ELECTRIC APPARATUS. CHARLES A. BIRCHFIELD, Larchmont, N. Y. Filed Sept. 26, 1922. Serial No. 590,561. 8 Claims. (Cl. 171—119.)



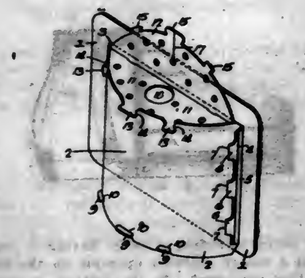
1. In an inductance mounting, the combination with an inductance member, of a second inductance member, and means whereby said second member may be shifted angularly both transversely of, as well as toward and away from the field about said first member.

1,488,311. METHOD OF PURIFYING SILICON-CARBIDE CRYSTALS. CLARENCE J. BROCKBANK, Philadelphia, Pa., assignor to Abrasive Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1920. Serial No. 418,379. 11 Claims. (Cl. 252—8.)



6. The method for purifying silicon carbide crystals or grains that consists in treating the carbide with a solution of a metallic substance capable of replacing the impurities with its contained metal.

1,488,312. TRAP. HARRY E. BRONSON, Mineral, Wash. Filed Nov. 28, 1922. Serial No. 603,799. 1 Claim. (Cl. 43—61.)

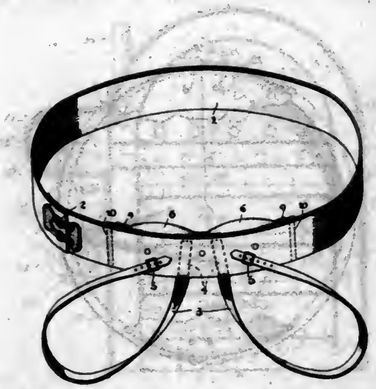


A trap having a normally open closure, a rod adjacent the top of and pivotally mounting said closure, a return weight associated with said rod, a crank associated with said rod, an electro magnet on a side of the trap having a movable core operatively associated with said crank, a base pivoted within the trap and movable under the weight of a captive, cooperating contacts within the trap one carried by said base and normally disengaged from the other, the contacts being in an electric circuit with said magnet and adapted for engagement through the weight of an animal on the base, escape means for the trap for communication with a cage raised above the bottom of the trap, the base normally extending upwardly and rearwardly, toward said escape means, and said closure being movable rearwardly and downwardly toward said base through energization of said magnet.

1,488,313. CONTROL MECHANISM FOR THE IGNITION LEVERS OF INTERNAL-COMBUSTION ENGINES. JOHN LOCKHART BRUNTON and WILLIAM PATON BRUNTON, London, England. Filed Nov. 3, 1923. Serial No. 672,593. 4 Claims. (Cl. 123—117.)

1. In an internal combustion engine having a throttle operating device, a manifold, and an ignition controlling device; a member operated by the suction in the manifold, and means including a wire and a looped flexible casing therefor connecting the member and the throttle operating device to the ignition controlling device so that the latter is controlled by the movements of either said member or the throttle operating device, one of said movements being transmitted by the wire and the other by the casing.

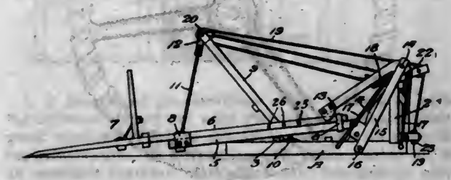
1,488,314. ILLUMINATED SIGN. EUGENE CARBAINE, Philadelphia, Pa. Filed Aug. 31, 1921. Serial No. 497,122. 2 Claims. (Cl. 40—132.)



1. The combination in a sign, of a flat body portion; a flexible curved section connected thereto at one side and having slots at the opposite side and a series of notches at the upper and lower edges; and top and bottom sections hinged to the body portion having keys extending into the notches of the curved section and detachably secured to the curved section; and a series of keys on the body portion engaging said slots in the curved section.

1,488,315. CLEANSER FOR ARTIFICIAL TEETH. EVERETT BROWN CASTLEMAN, Spokane, Wash., assignor to Howard S. Clemmer, Spokane, Wash. Filed Oct. 17, 1922. Serial No. 595,169. 2 Claims. (Cl. 167—9.)

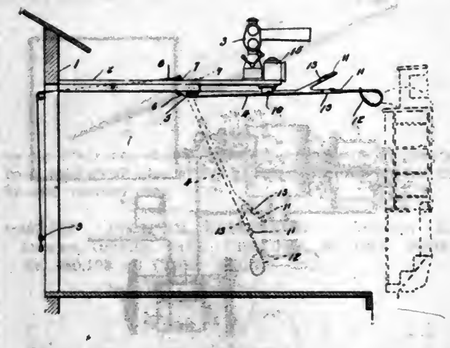
1. A cleansing solution for artificial teeth comprising tartaric acid, a saturated solution of bensoate of soda, a vegetable coloring matter, and water in sufficient quantity.



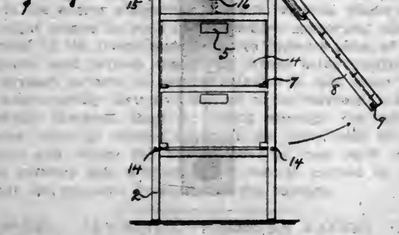
2. A liquid cleansing solution comprising tartaric acid substantially 2 ounces; a saturated solution of bensoate of soda substantially 2 drams; vegetable coloring matter substantially 6 drops, and water sufficient to make 4 ounces of the preparation.

1,488,316. TRUSS. EDMUND N. CHITTENDEN, Johnson City, N. Y. Filed Aug. 16, 1923. Serial No. 657,790. 2 Claims. (Cl. 128—120.)

1. A truss for the purpose set forth comprising, a body strap, a flexible member having its inner portion fixedly secured to the inner face of said strap and its outer portion extended from the straps, said outer portion providing a pair of pockets having the mouths thereof positioned at a point removed from the inner side edge of said inner part, a short strap positioned against said inner part, said inner part constituting a closure flap common to said pockets when said outer part is folded against said short strap, and said outer part being cut away intermediate its ends to provide said pockets with closed ends free and spaced from each other.



1,488,317. HAYSTACKER. FRANK BLAINE COATES, Johnstown, Colo. Filed Jan. 30, 1922. Serial No. 532,779. 6 Claims. (Cl. 214—141.)

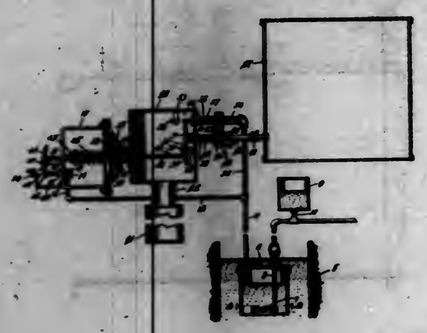


1. In a haystacker, the combination with a frame, extensible arms pivoted thereto and carrying a rack, and swinging arms pivoted to the frame, of bars pivoted to the swinging arms, means mounted on the extensible arms for engagement with the bars whereby the arms may be lengthened, tension-links pivoted to the frame, and springs extending from the bars to the tension-links for creating tension upon the bars when the arms are in an elevated position.

1,488,318. MEANS FOR DELIVERING TRAIN ORDERS. EDWARD L. COTTINGHAM, Winnipeg, Manitoba, Canada. Filed Apr. 5, 1923. Serial No. 630,179. 2 Claims. (Cl. 258—26.)

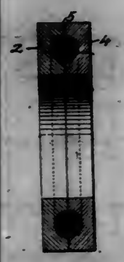
1. In train order delivering mechanism, a delivery arm having its outer portion pivoted to swing laterally in each direction, and a spring at the joint to normally maintain the outer portion of the arm in a given position and admit of its movement in each direction and operating to return the same to the predetermined position.

1,488,319. SERVING TABLE. VICTOR A. DE CANIO, Union Hill, N. J., and WALTER J. BUZZINI, White Plains, N. Y.; James De Riso, executor of said Victor A. De Canio, deceased, assignor to said Buzzini. Filed Oct. 22, 1920, Serial No. 418,755. Renewed Nov. 10, 1922. Serial No. 600,191. 4 Claims. (Cl. 45—17.)



1. In a combination serving table and food carrier, the combination of a body having a stud in one of the upper corners thereof, a locking stud at the top thereof, and at a distance away from the first-mentioned stud, a leaf mounted upon an angle member having a longitudinal slot provided with a lateral branch, and the said first-mentioned stud projecting through the said slot so that the angle member can be slid thereon, the said angle member having a notch at its upper end so that the said leaf can be held in a vertical position or it can be slid to a horizontal position in which the first-mentioned stud engages the said lateral branch and the notch in the angle member engages the said locking stud, whereby the said leaf is firmly locked in position.

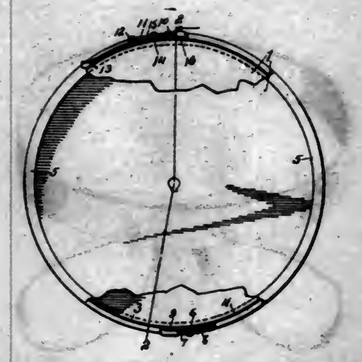
1,488,320. PUMP. JAMES EVENS DELK, Marietta, Ga. Filed June 16, 1922. Serial No. 568,818. 8 Claims. (Cl. 103—240.)



1. A pressure pump system comprising a pump chamber, a pressure source and a working tank interposed between and connected to said pump and pressure source, a valve controlling the inlet from said pressure source

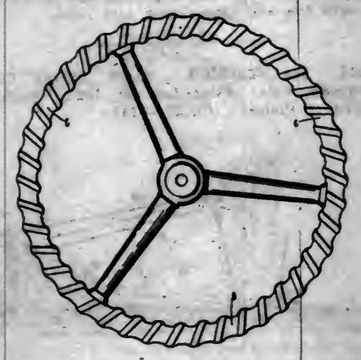
to the working tank, a valve controlling the outlet from the working tank to the pump chamber, a pressure-responsive member associated with the working tank, and

means arranged within the working tank and operated by said pressure-responsive member for controlling said valves.



1,488,321. MOLDED FABRIC GASKET AND METHOD OF MAKING SAME. WALTER M. DE WITT, Somerville, N. J., assignor to Johns-Manville, Incorporated, a Corporation of New York. Filed Nov. 16, 1922. Serial No. 601,253. 3 Claims. (Cl. 154—2.)

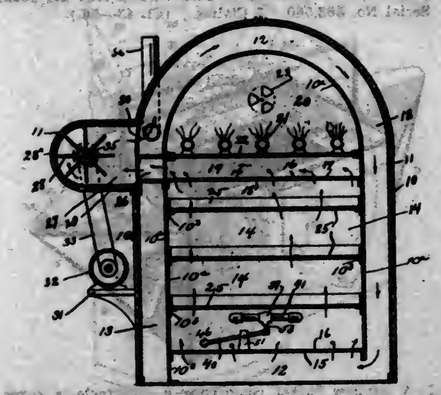
2. A process for making gaskets of substantially circular cross-section which comprises the following steps: winding a strip of fabric on a mandrel with cementitious material between the adjacent coils and thereby forming a ring of substantially quadrangular cross-section; distorting the ring so formed by a twist of forty-five degrees throughout so that one diagonal of the cross-section will be arranged perpendicular to the plane of the ring, and finally molding such distorted ring to substantially circular cross-section by pressure along the line of said diagonal in a two-part mold, the area of cross-section of which is approximately equal to the area of cross-section of the original ring, said mold being parted along the plane of the other diagonal of the distorted ring.



1,488,322. FILM-REEL COVER. LEO J. DOTY, Kansas City, Mo. Filed Nov. 23, 1922. Serial No. 602,766. 2 Claims. (Cl. 206—63.)

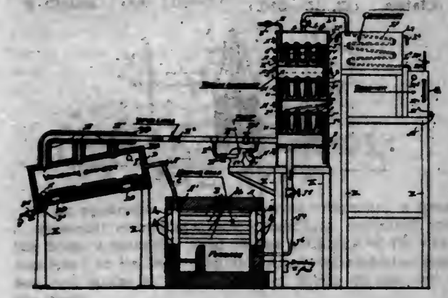
1. A reel cover of the kind described comprising two semi-circular members having means for embracing the edges of the heads of a reel and hinged to each other at one set of ends, adjacent ends of said members overlapping each other in the closed position, a link pivoted at one end to one of said members, the other member on its outer side having a projection, and a lever pivoted

to the other end of said link and adapted to engage said projection for drawing together the free ends of said members, substantially as set forth.



1,488,323. HANDWHEEL. HORACE WALTER DOVER, Northampton, England. Filed Oct. 2, 1922. Serial No. 591,811. 4 Claims. (Cl. 74—33.)

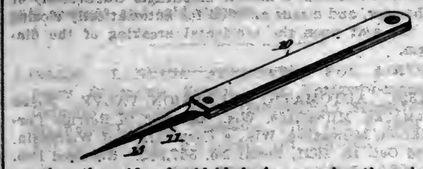
1. A hand wheel provided with a celluloid, exonite or like covering or sheathing formed with pronounced groove running in spiral fashion therearound at a pitch corresponding substantially with the width of a finger, and of such depth as to receive the fingers of the user, a packing strip being wound around the rim of the wheel as an open spiral before the covering or sheathing is applied thereto.



1,488,324. DEHYDRATOR. JOHN H. DRAKE, Oakland, Calif. Filed May 31, 1923. Serial No. 642,632. 6 Claims. (Cl. 34—39.)

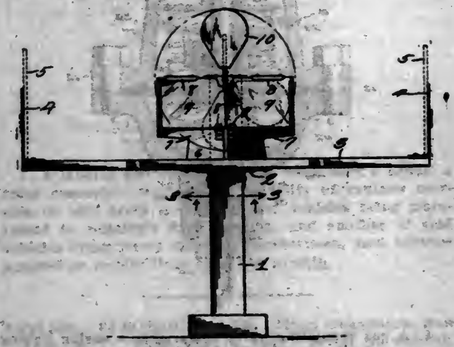
2. A dehydrator comprising a drying chamber having perforated upper and lower walls, a plurality of reticulated trays in said drying chamber, a heating chamber above said drying chamber, a suction chamber separating said drying and heating chambers, an air circulating chamber above said heating chamber and extending down

the side of and beneath the lower wall of the said drying chamber, and means for causing a current of heated air to flow through said circulating and drying chambers.



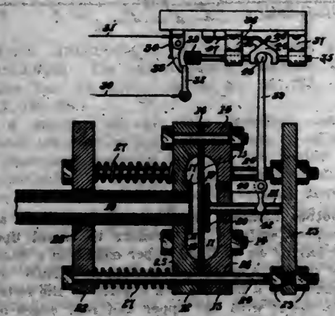
1,488,325. PROCESS FOR TREATING PETROLEUM. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 21, 1919. Serial No. 305,798. 8 Claims. (Cl. 196—25.)

1. A process of oil conversion which consists in passing hydrocarbon oil but once through a continuous elongated passageway where the oil is subjected to a cracking temperature, in introducing the highly heated oil to an enlarged chamber with which said passageway communicates, in discharging the vapors from said chamber to a dephlegmator, in introducing charging stock to the dephlegmator to intimately commingle with said vapors to condense the heavier vapors and heat the stock, in discharging uncondensed vapors, in returning to the inlet side of said elongated passageway intermingled condensate and charging stock for passage therethrough, in withdrawing carbon containing residue from said enlarged chamber without permitting any portion thereof to again enter the elongated cracking passageway, and in maintaining a superatmospheric pressure on said system.



1,488,326. SPARK-PLUG CLEANER. ADELARD JOSEPH DUBBS, Glens Falls, N. Y. Filed Dec. 31, 1921. Serial No. 526,447. 1 Claim. (Cl. 15—104.01.)

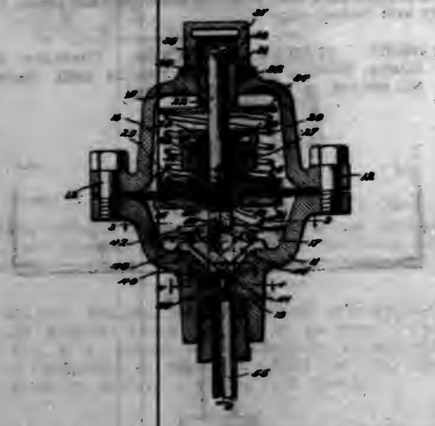
A spark plug cleaner comprising a relatively thin elongated blade, a handle formed therewith, the said blade tapering from its point of connection with said handle toward the free end thereof, teeth formed on one side of said blade whereby material accumulating in a spark plug may be broken up, and a knife edge formed



on the other side of said blade for scraping the substance from said spark plug after the same has been broken up by said toothed edge.

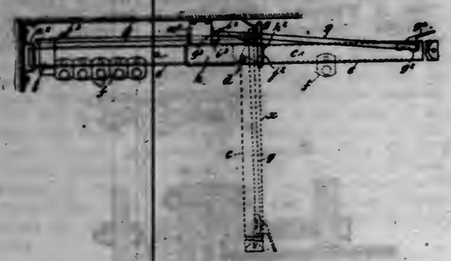
1,488,327. PICTURE REFLECTOR. CONSTANT L. DUHEM, Oroville, Calif. Filed June 24, 1921. Serial No. 480,103. 1 Claim. (Cl. 88—29.)

A reflecting device, said reflecting device comprising a main frame, a mirror supporting frame, mirrors supported in the mirror supporting frame in vertical planes and at right angles to each other, picture supporting means carried by the frame and spaced to opposite sides of the mirrors, said picture supporting means being positioned to support pictures in parallel relation to each other and at substantially forty-five degrees to the mirrors, a horizontally disposed shaft extending through the mirror frame centrally thereof adjacent the upper side of the frame and where the mirrors diverge from each other and between said mirrors and a shutter carried by said shaft and disposed forwardly of the mirrors.



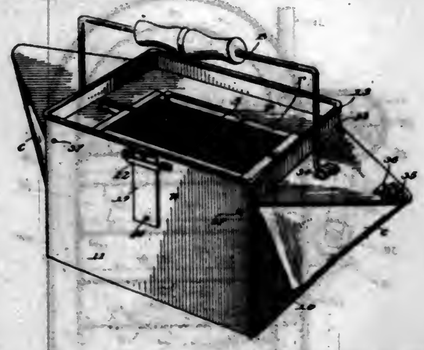
1,488,328. AUTOMATIC PRESSURE SAFETY CONTROL. JOSEF ELLMAUER, Milwaukee, Wis., assignor to Refrigo Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 5, 1921, Serial No. 467,064. Renewed Feb. 11, 1924. 3 Claims. (Cl. 137—139.)

3. An automatic controlling device for fluid pressure piping comprising a casing having a chamber to which the end of the piping communicates, a metallic gasket



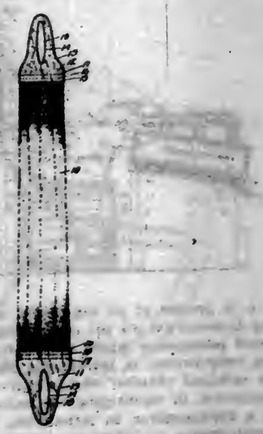
formed within the chamber adjacent the outlet end of said pipe effecting a valve seat for the end of the piping within said chamber, a flexible diaphragm transversely of the chamber, and means adapted for automatically closing upon the seat upon the accidental breaking of the diaphragm.

1,488,329. AUTOMATIC EXPANSION VALVE. JOSEF ELLMAUER, Milwaukee, Wis., assignor to Refrigo Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 15, 1921. Serial No. 507,962. Renewed Feb. 11, 1924. 7 Claims. (Cl. 50—28.)



1. A gas regulating valve comprising a casing having a chamber, a flexible diaphragm transversely of the chamber, an inlet port in the bottom of the chamber, a stem adjustably connected centrally to the diaphragm axially of the casing, a needle valve for the inlet port, a U-shaped plunger on the valve, a U-shaped block swiveled in the lower end of the stem above the plunger, and pivotally connected toggle links pivoted within said block and plunger whereby the valve is adapted for closing upon the elevating of the diaphragm during an increase of gas pressure beneath the diaphragm.

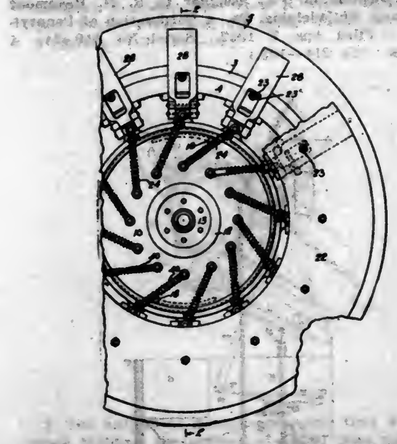
1,488,330. CLOTHES-HANGING BAR FORMED OF HINGED-TOGETHER MEMBERS. JAMES EVERITT, London, England. Filed Feb. 1, 1923. Serial No. 616,437. 3 Claims. (Cl. 211—14.)



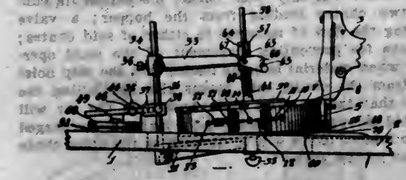
1. A clothes hanging bar, combining a fixed and a hinged member suitable for runners to travel upon, a projection having an inclined upper edge and a declining rear edge rigidly applied to the upper surface of the fixed member, and a pivoted link applied to the swingable member to co-act with the upper and rear edges of the projection for holding the swingable member in end to end alignment with the fixed member and adapted for hand operation, substantially as described.

1,488,331. MINNOW BUCKET. GEORGE LESLIE FERRIS, McArthur, Ohio, assignor to The Wellston Metal Products Co., a Corporation of Ohio. Filed May 25, 1922. Serial No. 563,560. 7 Claims. (Cl. 43—56.)

1. A minnow bucket comprising a receptacle, a cover therefor with a central opening, a closure for said opening consisting of a frame and a reticulated closure for said frame, an extension from said frame, a spring finger secured to the wall of said receptacle associated with said extension and having a projection adapted to engage said extension of the frame for holding the same against upward movement.



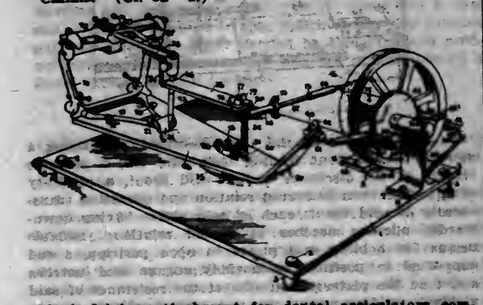
1,488,332. BATH SPONGE. ANNIE FORNO, New York, N. Y. Filed Feb. 5, 1923. Serial No. 617,150. 3 Claims. (Cl. 15—210.)



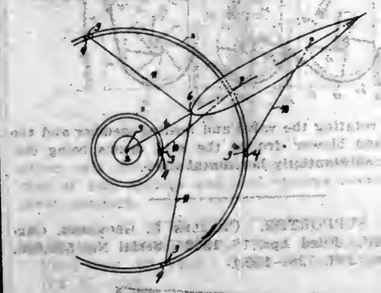
1. A cleaning device comprising open-ended tubular body of the fibrous interior of the luffa gourd, and a closure secured to each end of said body comprising a flexible fabric member having portions overlying opposite sides of said body and closing the ends, substantially as set forth.

1,488,333. EMERGENCY BRAKE. DAVID E. FOGUS, Jersey City, N. J., and MICHAEL F. QUINTE, Burbank, Calif. Filed Dec. 10, 1921. Serial No. 521,442. 4 Claims. (Cl. 188—4.)

1. The combination with a vehicle wheel and a service brake including a drum and operating means within the drum, of an auxiliary brake drum located around the drum of the service brake and having limited rotary movement on the wheel, radially movable road engaging members, means whereby rotation of the auxiliary brake drum moves said members to road engaging position and locks them in said position, means for releasing the locking means and a coiled spring interposed between the two brake drums for restoring the auxiliary brake drum to its normal position.

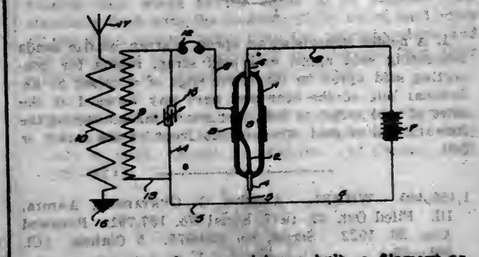


1,488,334. APPARATUS FOR MAKING COVERS FOR CANTEENS AND OTHER ARTICLES. SIGMUND FREY, Los Angeles, Calif., assignor to Woolwine Metal Products Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 28, 1920. Serial No. 432,709. 9 Claims. (Cl. 112—2.)



1. An apparatus for making covers comprising a drum, a segmental clamping member yieldingly connected with the drum, a clamping band at the periphery of the drum connected at its ends with the segmental clamping member, and means to hold a piece of fabric on one end of the drum.

1,488,335. DRIVING ATTACHMENT FOR DENTAL ARTICULATORS. WILLIAM MILTON GAMBILL, Merkel, Tex. Filed Jan. 5, 1924. Serial No. 684,595. 16 Claims. (Cl. 32—1.)

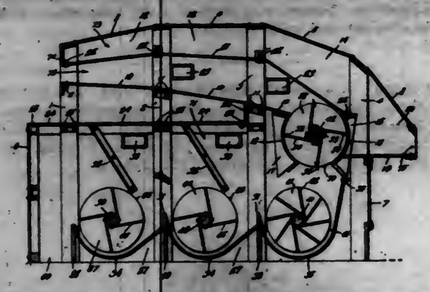


1. A driving attachment for dental articulators comprising an oscillatory support for a lower articulator, an oscillatory combined supporting and coupling member for an upper articulator, a common driving element, an adjustable transmission having a universal joint connection between said element and said member, and an adjustable transmission having a universal joint connection with said element and said support.

1,488,336. LANDING APPARATUS FOR AIRSHIPS. FRITZ GENTZCKE, Zeesen, near Konigswusterhausen, Germany, assignor to Luftfahrzeugbau Schmotte-Lanz, Mannheim-Rheinau, Germany. Filed Oct. 8, 1923. Serial No. 667,323. 3 Claims. (Cl. 244—2.)

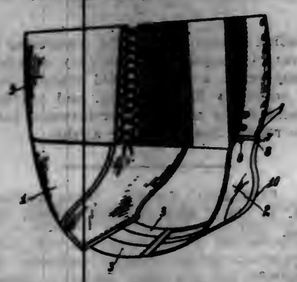
1. A landing station for airships comprising a tower, a track concentric therewith, a plurality of vehicles movable on said track, a pair of said vehicles being maintained in relatively fixed relation, and another of said vehicles being freely movable therebetween, said vehicles adapted to receive lines from the airship.

1,488,337. ELECTRIC VALVE. HUGO GERNSBACK, New York, N. Y. Filed May 14, 1921. Serial No. 469,649. 5 Claims. (Cl. 250—27.)



1. An electric valve comprising a bulb, a filament arranged therein and contacting with the wall of the bulb, an electric conductor arranged in contact with the outer wall of the bulb, and means for energizing said filament.

1,488,338. COTTON-CLEANING MACHINE AND BOLL BREAKER. IRA LEE GILMORE, Oklahoma City, Okla. Filed Dec. 18, 1922. Serial No. 607,753. 2 Claims. (Cl. 19—38.)

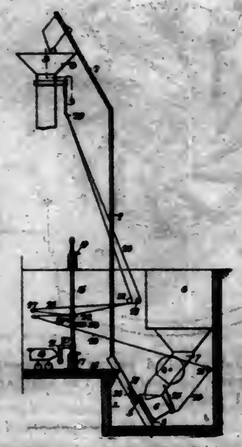


1. A machine of the class described, comprising a chamber provided with a bottom made up of a plurality of foraminous concaves disposed one behind the other longitudinally of the machine, a feed conduit located above the chamber, and a suction conduit disposed above the feed conduit, the conduits having a common foraminous wall, the feed conduit having a neck communicating with the chamber, a rotary valve and feeding member journaled in the neck, the feed conduit being open and continuous from its intake end to the rotary member, combined conveyor and blower drums journaled above and cooperating with the concaves, the valve and feeding member being located above the first of the conveyor and

blower drums, and discharging directly thereinto, the space between the valve and feeding member and the first of the conveyor and blower drums being open, and

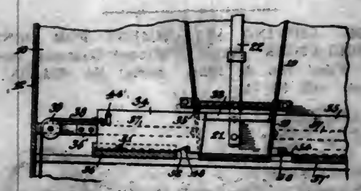
means for rotating the valve and feeding member and the conveyor and blower drums, the said drums being disposed in a substantially horizontal line.

1,488,339. SUPPORTER. CHARLES E. GROESBECK, Oakland, Calif. Filed Apr. 18, 1922. Serial No. 555,093. 7 Claims. (Cl. 128—159.)



1. A holder comprising an apron, a strap, elastic bands connecting said apron and said strap, means for connecting said apron to the lower edge of a corset or abdominal belt at the rear and part way forward at the sides of said corset or belt, and means for connecting the forward end of said strap to the front of the corset or belt.

1,488,340. WHEEL. ANDREW G. GUSTAFSON, Aurora, Ill. Filed Oct. 22, 1917, Serial No. 197,791. Renewed Aug. 26, 1922. Serial No. 584,575. 5 Claims. (Cl. 301—55.)

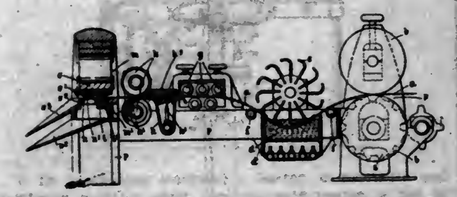


1. A wheel having, in combination, a hub, a rim, central radial and lateral cross spokes connecting the rim and hub together, all of said spokes being spaced from each other, and means clamped upon all of the spokes in the transverse plane passing through the points of crossing of the cross spokes to hold them against vibration.

1,488,341. INTERLOCKING MEANS FOR CONTROLLING ELEVATOR MECHANISMS. WILLIAM B. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,424. 4 Claims. (Cl. 214—125.)

1. The combination in a skip hoist, of a bucket; rails on which the bucket travels; a chute for loading material into the bucket; a platform on which a car can be run and its contents discharged into the bucket; a hopper into which the skip hoist bucket discharges its contents; two chutes leading from the hopper; a valve controlling the flow of material to either of said chutes; and means for preventing movement of the hand operated car when material is being loaded into the skip hoist bucket from the chute, said means also controlling the valve so that the material discharged from the car will be directed through one chute and the material discharged from the loading chute will be directed to the other chute controlled by the valve.

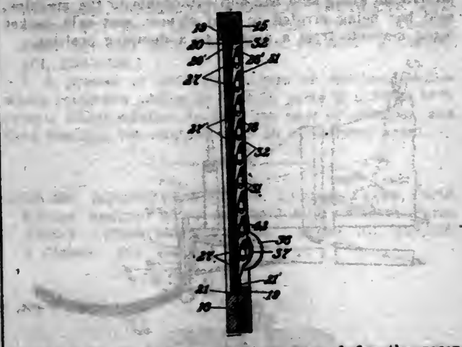
1,488,342. DISPENSING AND MEASURING CABINET. FRANK R. HENDRICKSON, Kinta, Okla. Filed Sept. 9, 1922. Serial No. 587,134. 2 Claims. (Cl. 221—108.)



1. An apparatus of the class described, comprising a storage bin, a spout leading from said bin, a movable closure at the discharge end of said spout, a plurality of cut off devices in spaced relation and operating transversely of said spout, each of said plates having downwardly opening notches in spaced relation, yieldable means for holding said plates in open position, a rod supported in position to movably engage said notches and hold the plates closed against the resistance of said yieldable holding means, means for independently closing said plates to engage them with the holding rod, and means for releasing said holding rod.

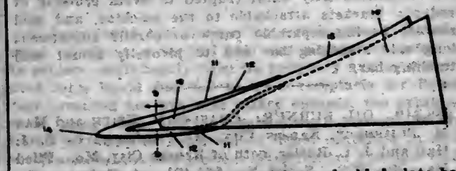
1,488,343. METHOD OF MAKING TIRE CASINGS. HARRY A. HOFFMAN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1921. Serial No. 491,925. 3 Claims. (Cl. 154—14.)

1. The method of making pneumatic tires which comprises building the carcass of fabric plies coated with substantially unvulcanized rubber, applying a vulcanized rubber surfaced, fabric breaker-strip and a substantially unvulcanized rubber tread to said carcass, and vulcanizing the tire under compacting pressure.



1,488,344. MACHINE FOR FORGING NAILS OR OTHER ARTICLES. FRANK HUMPHRIS, Parkstone, England, assignor of one-half to Kenneth Alexander Roberts, London, England. Filed Dec. 12, 1922. Serial No. 606,495. 1 Claim. (Cl. 10—36.)

A follow-on-process machine embodying intermittently-rotated feed die-rolls, a heat-bath of molten metal, a depressor associated with said heat bath, a set of stock-straightening-rolls, a stock re-heating muffle and baffle, a set of intermittently-rotated combined product-rough-forming and feed-rolls, a power-press comprising a ram and a bolster, product-forming-punches, blanking-punches and one blade of a shear carried by said ram, and product-forming-dies, blanking-dies and the other blade of a shear carried by said bolster.



1,488,345. VENTILATOR. THOMAS A. JENKINS, Jersey City, N. J. Filed Mar. 17, 1922. Serial No. 544,540. 2 Claims. (Cl. 98—31.)

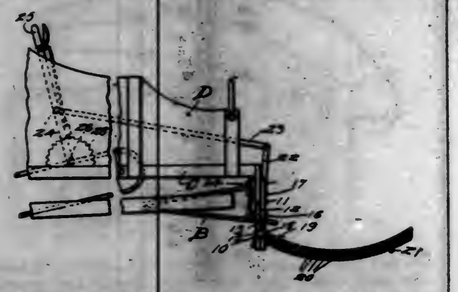
1. A ventilator comprising a frame, a set of panel supports pivotally connected to each side of and arranged within the frame, the supports of one set aligning with the supports of the other set, each of said supports formed with an angularly disposed slotted arm, a panel mounted in each pair of aligning supports, a set of levers associated with each set of supports, pivot members connecting the ends of said levers together and to said arms, springs carried by the arms and bearing against said pivot members, and actuating means for said levers for opening and closing said panels with respect to each

other, said pivot members being grooved for the reception of said springs and said springs overlapping said pivot members.

1,488,346. PLOWPOINT. NELS JENSEN, Berlin, Wis. Filed Sept. 29, 1922. Serial No. 591,278. 3 Claims. (Cl. 97—125.)

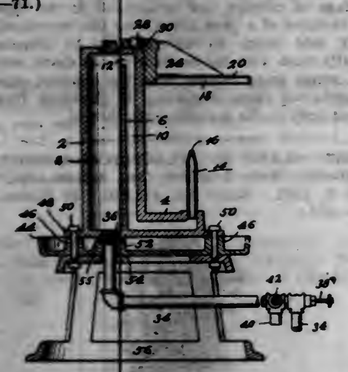
1. A repair plow point comprising a doubled plate having wings to overlap and be secured to the upper and lower surfaces of a plow share over the worn-down point thereof, said wings having edges to be disposed substantially flush with the landside of the share, said edges of the wings being thicker than the opposite edges, and the firstnamed edges decreasing in thickness from their adjacent ends to the opposite ends thereof.

1,488,347. CLAMP FOR ELECTRICAL CONDUCTORS. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed July 6, 1921. Serial No. 482,750. 12 Claims. (Cl. 173—273.)



1. A springless clamp for electrical conductors, comprising two associated jaw members with an interfitting loose engagement at one end, and at the other end of the clamp provided with a mouth for receiving an electric line conductor, and a bolt screw-threaded through one jaw member and terminating beyond the other jaw member in a manipulating eye, whereby it may be turned from a distance.

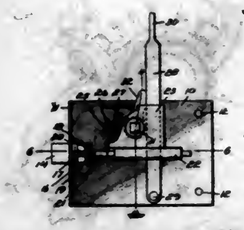
1,488,348. ATTACHMENT FOR POTATO-DIGGING MACHINES. WYLIE KEIFFER, Perham, Minn. Filed May 25, 1922. Serial No. 563,609. 3 Claims. (Cl. 55—9.)



1. A machine of the class described having a basket to receive products, said basket having an attaching bar, and attaching means adjustable along said bar and for engagement with the machine.

2. A machine of the class described having a reticulate basket to receive products, an attaching bar, clamps adjustable along said bar and attachable to the machine, said bar being pivoted to said clamps, and said basket being movable from a normal to a dumping position.

3. A machine of the class described having a discharge table, a reticulate basket under and relatively close to said table substantially avoiding falling of the products into the basket, said basket having an attaching bar, longitudinal bars on said attaching bar, a brace bar for said longitudinal bars, said attaching bar and brace bar being lowermost whereby the upper surface of the bars will be substantially uninterrupted to avoid bruising of products, brackets attachable to the machine, and said brackets having separable parts to permit adjustment along said attaching bar and to pivotally mount said attaching bar.



1,488,349. OIL BURNER. CHARLES M. KEITH and MAX M. PUMPHREY, Kansas City, Mo., assignors to B. J. Hall and J. L. Butler, both of Kansas City, Mo. Filed May 29, 1922. Serial No. 564,491. 4 Claims. (Cl. 158—71.)

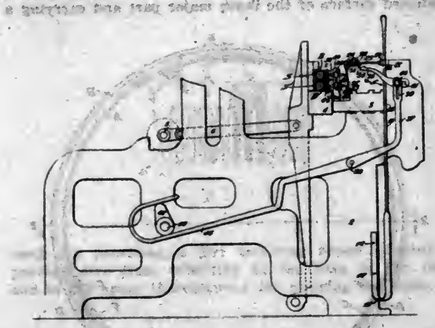
4. An oil burner consisting of a generator having a vertical partition dividing said generator into a chamber and a duct which latter communicates with the upper portion of said chamber, a discharge nozzle communicating with the lower portion of the duct, and a flame spreader having a V-shaped compartment to fit over the complemental portion of the generator and a horisontally-disposed plate to project over said discharge nozzle.

1,488,350. AUTOMOBILE DOOR LOCK. ALEX KIKTA, Flint, Mich. Filed Sept. 20, 1921. Serial No. 501,870. 1 Claim. (Cl. 292—223.)

In an automobile door lock, a lock plate, a latch pivotally connected to one end thereof, a slidable flat locking bolt positioned against said plate and having one end pivotally connected to said latch whereby the latter is shifted when the bolt is operated, said bolt formed with a lengthwise slot having a reduced end, a spring carried by said plate above said bolt and having one end thereof extended into the reduced end of said slot, a casing secured to said plate and having its lower portion providing a guide for said bolt, a vertically disposed actuating member having its lower end pivoted to said plate below said bolt and extending up through said slot and above said plate and operable from the interior

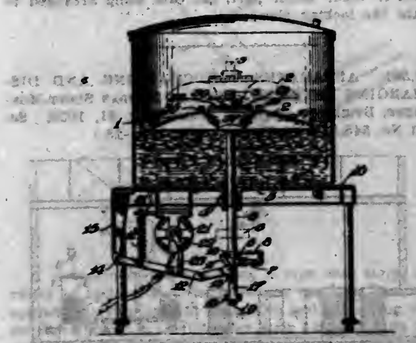
of an automobile for shifting the bolt to move the latch to released position, a spindle disposed at right angles to said member and mounted in said casing and plate above said bolt and operable from the exterior of the automobile, and an upwardly extending finger fixed to the spindle and bearing against said member whereby the latter is shifted to move the bolt to release the latch when the spindle is actuated to move the finger rearwardly.

1,488,351. SHOEMAKER'S TOOL. FRANK KILIAN, Hamtramck, Mich. Filed Aug. 12, 1921. Serial No. 491,777. 1 Claim. (Cl. 294—43.)



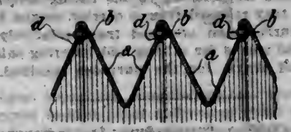
In a tool of the class described, a pair of crossed handles, a longitudinally extending jaw formed integrally with each handle, and a pair of opposed laterally extending jaws formed integrally with each of the longitudinally extending jaws, each longitudinally extending jaw with its pair of laterally extending jaws forming a flat, single plane gripping surface equal to their entire widths, said single plane gripping surfaces being roughened throughout their entire area.

1,488,352. WEFT-CONTROLLING MECHANISM FOR LOOMS. FREDERIC E. KIP, Montclair, N. J., assignor to The Salt's Textile Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 28, 1921. Serial No. 473,336. 15 Claims. (Cl. 139—276.)



1. A feeler-motion for looms comprising a freely-floating feeler adapted to feel the weft or filling on the bobbin in the running shuttle, and a gravity-controlled lever

pendently mounted to adapt it to bear directly against the feeler without being connected thereto to urge the feeler toward the bobbin whereby when the filling is



substantially exhausted the feeler will allow displacement of the lever to actuate the controlling-mechanism of the loom.

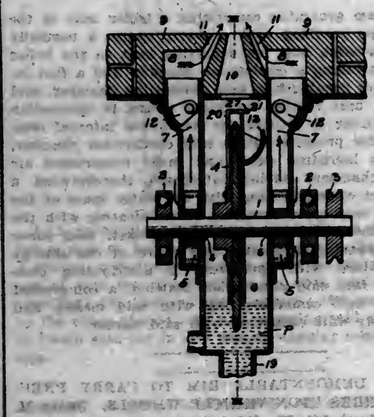
1,488,353. WASHING MACHINE. MAUDE B. LATSHAW, Philadelphia, Pa. Filed July 2, 1923. Serial No. 648,862. 5 Claims. (Cl. 259—144.)

1. In a washing machine, a beater, a rotatable and vertically movable shaft carrying said beater, a tub in which said beater is operative, said beater being formed of a body provided with a central chamber, a second chamber surrounding the central chamber, an auxiliary chamber surrounding said second mentioned chamber, and wings extending from said auxiliary chamber, said wings having chambers therein, the several chambers being open below in communication with the interior of the tub, and means for relieving said chambers of vacuum.

1,488,354. BELLOWS. JACQUES LOUIS LAMBELS, Vincennes, France. Filed May 15, 1922. Serial No. 561,006. 3 Claims. (Cl. 105—18.)

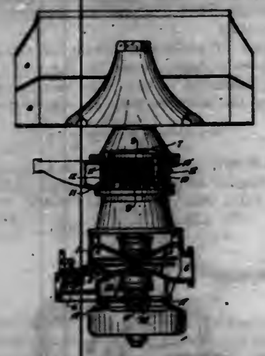
1. An accordion-shaped bellows provided between its folds with flat strengthening bands lying in the planes of the outer folding lines of the bellows and rivets distributed along said outer folding lines for securing said bands to said bellows.

1,488,355. PRODUCTION OF ETHERS OF CARBOHYDRATES HAVING THE EMPIRICAL FORMULA $n(C_6H_{10}O_5)$, THEIR CONVERSION PRODUCTS AND DERIVATIVES. LEON LILIENFELD, Vienna, Austria. Filed Apr. 25, 1921. Serial No. 464,356. 3 Claims. (Cl. 260—152.)



3. A process of producing ethers of cellulosic bodies which comprises adding at least 15 parts of a 30 to 50% caustic alkali solution to each one part of cellulose, and then treating the mixture with an etherifying agent.

1,488,356. ATOMIZER BURNER. CHARLES LINKÉ, Paris, France, assignor of one-half to Joseph Gemayel, Paris, France. Filed May 10, 1921. Serial No. 468,318. 2 Claims. (Cl. 158—77.)



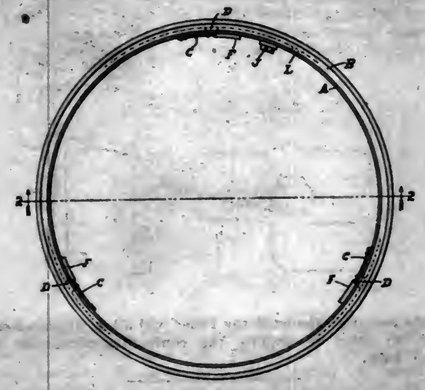
1. In a liquid fuel burner the combination of an element rotary on a vertical axis and adapted on rotation to project centrifugally from its periphery and in attenuated form liquid fuel fed to it, a receptacle for liquid fuel arranged beneath said rotary element, the arrangement being such that the said rotary element in its lower part may be immersed in liquid contained in said receptacle, said rotary element being further provided with a passage extending upward within said rotary element and opening below within said receptacle and opening above to a surface over which on rotation liquid will flow centrifugally.

1,488,357. METHOD OF AND APPARATUS FOR BURNING LIQUID FUEL. CHARLES LINKÉ, Paris, France. Filed Mar. 23, 1922. Serial No. 547,424. 18 Claims. (Cl. 158—77.)

2. The method herein described of burning liquid fuel which consists in projecting against gravity and into the line of meeting of convergent streams of combustion-sustaining air an attenuated curtain of fuel, and heating the fuel as it is projected.

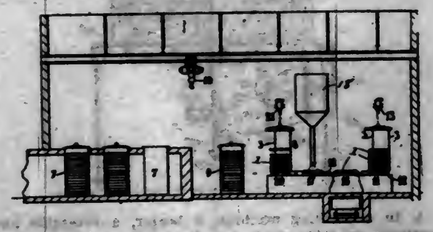
1,488,358. POWER-TRANSMITTING MECHANISM. WILLIAM J. A. LOWSON, Springfield, Mass. Filed Mar. 13, 1922. Serial No. 543,179. 6 Claims. (Cl. 74—7.)

1. In a power transmission device, the combination, of a driving shaft, a driven shaft, planetary gearing mechanisms connecting the shafts the gear teeth of which are of the herring-bone type; flexible means connected to the driving shaft whereby that shaft may yield and move axially thereof, and the contact surfaces of the teeth of the gearing mechanism will automatically adjust themselves to produce the correct or uniform tooth pressure between the teeth of the driving and driven shafts for efficient operation.



1,488,359. STEAM GENERATOR. SALVADOR HERREJÓN LÓPEZ, Mexico, Mexico. Filed June 7, 1923. Serial No. 643,972. 19 Claims. (Cl. 158—3.)

1. A steam generator comprising a boiler unit of the tubular type provided with a water space, a normally closed combustion unit for supplying heat to the boiler unit and including a combustion chamber and a fuel injector burner opening into said combustion chamber, said combustion unit further including means in connection with the burner to provide for continuous internal combustion under pressure within said combustion chamber, said means including outer and inner compressed air receiving chambers having interposed therebetween a water jacket communicating with the water space of the boiler unit, said outer chambers communicating with the inner chambers through said water jacket, said inner chambers opposing each other and closed at one side by plates provided with apertures for distributing compressed air into said combustion chamber, a compressed air supply unit communicating with said means, and a fuel supply unit connected with said burner.



1,488,360. DEMOUNTABLE RIM TO CARRY PNEUMATIC TIRES UPON VEHICLE WHEELS. JESSE M. LOZIER, Humboldt, Ill. Filed Apr. 6, 1921. Serial No. 459,025. 3 Claims. (Cl. 301—35.)

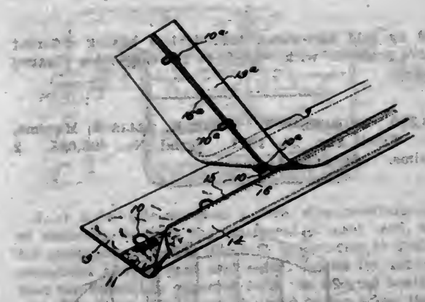
1. The combination, in a sectional telescoping demountable rim, of inner and outer major parts having registering openings, each major part extending entirely across the base of the supported tire, said parts being fitted together flangingly, and being so constructed as to be united and separated by straight telescoping motion to and from each other, means for securing said parts, comprising a flat spring attached longitudinally to the protected surface of the inner major part and carrying a

locking element which is practically a movable section of the major parts, and is adapted to fill a pair of the registering openings, and a circular wedge-faced cam centerpivoted to inner major part, the cam being arranged to operate the locking element.

1,488,361. APPARATUS FOR CHARGING AND DISCHARGING RETORTS. WILLIAM DUNDAS SCOTT-MONCRIEFF, Brighton, England. Filed Mar. 31, 1922. Serial No. 548,386. 6 Claims. (Cl. 214—18.)

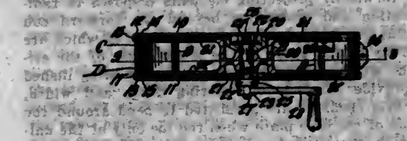
1. An apparatus for charging and discharging retorts, said apparatus comprising trays, a carrier for supporting the trays in a superposed condition, horizontally extending surfaces of limited width on the carrier and the trays respectively, said surfaces being adapted to be brought into and out of engagement with each other by turning the carrier and trays relatively to each other.

5. An apparatus for charging and discharging retorts, said apparatus comprising trays, a transportable carrier adapted at its lower end to receive said trays in superposed condition and to deliver them, means for holding and releasing a tray at the lower end of the carrier, a platform for receiving a series of superposed trays connected to a carrier, a tilting section in said platform, releasable means for securing to the tilting section of the platform, a tray released from a carrier, means for transporting a carrier and attached trays relatively to said platform, and means for raising and lowering said carrier and attached trays, for the purposes specified.



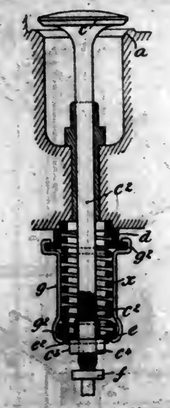
1,488,362. COMB. JULIUS SIDA, Jr., Indianapolis, Ind. Filed Aug. 15, 1923. Serial No. 657,516. 1 Claim. (Cl. 132—18.)

A comb including a solid body portion having a plurality of teeth projecting therefrom in spaced relation, said teeth being of uniform dimension throughout their length, the opposing faces of the teeth being formed with relatively large recesses having a flat bottom merging into shoulder portions adjacent the edges and ends of the



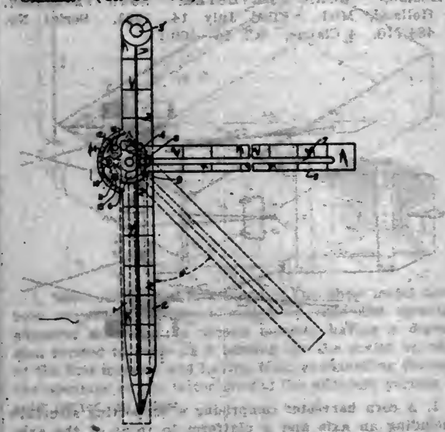
teeth for providing a dirt receiving recess adapted to prevent dirt from collecting at the base of the teeth and in the space therebetween for clogging the comb.

1,488,363. FASTENER STRIP. DAVID SILBERMAN, Brooklyn, N. Y. Filed Sept. 20, 1921. Serial No. 501,948. 2 Claims. (Cl. 2—265.)



1. A fastener strip including a tape base strip, a plurality of fasteners of the hook and eye type mounted at spaced intervals on said base strip and projecting beyond an edge thereof, a textile cover strip longitudinally folded and enveloping said base strip, the cover strip extending over the side of the base strip to which the fasteners are attached substantially to the above mentioned edge thereof, and means extending through superposed portions of the cover strip and base strip for retaining the latter in place.

1,488,364. HOSE APPARATUS. CARL SNYDER, Cleveland, Ohio. Filed Apr. 16, 1923. Serial No. 632,512. 6 Claims. (Cl. 242—86.)



1. A hose apparatus comprising, two stationary end walls secured to each other and one of these walls adapted to be secured to a support, a hose reel journaled on said end walls, and door means between said end walls and adapted to either form a complete closure for said apparatus or to selectively provide an opening at any place along the outer surface between said end walls of said apparatus.

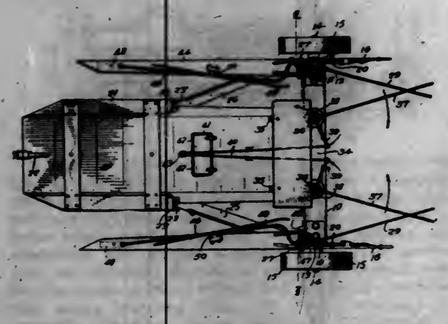
1,488,365. VALVE-SPRING RETAINER. ERNEST STOAKES, Birmingham, England. Filed Dec. 22, 1921. Serial No. 524,246. 4 Claims. (Cl. 29—86.3.)

1. A device for mounting and dismounting on a valve stem a spring having washers at its ends, comprising a tubular cage having hooked members projecting beyond the ends of the tubular portion and adapted to fit over said washers, said tubular member being cut away longitudinally to form an opening throughout its length.

1,488,366. DIVIDERS. JOHN M. STUCHLIK, Roundup, Mont. Filed Oct. 4, 1920. Serial No. 414,630. 4 Claims. (Cl. 33—75.)

1. A geometrical instrument comprising a divider having a pair of legs adapted to constitute the head of a T-square; a bar provided with a slot pivotally secured to one of said legs intermediate its ends, and adapted to constitute the blade of the T-square; and means carried by the other of said legs, and engaging said slot, adapted to clamp said bar in any desired angular relation to said legs.

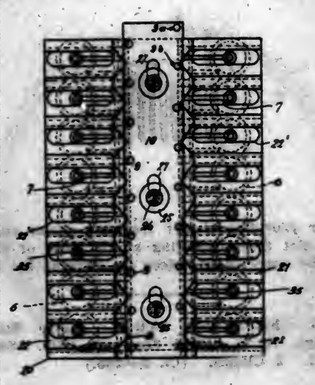
1,488,367. CURTAIN HOLDING AND RELEASING DEVICE. WILLIAM B. TIPPETT, Washington, D. C., and JERRY T. SMITH, Bethesda, Md. Filed Dec. 22, 1922. Serial No. 682,226. 8 Claims. (Cl. 105—28.)



3. A curtain holding and releasing device comprising a coupling element adapted to connect a curtain attaching member with the vestibule of a car, said element including a shiftable coupling head, a crank arm for shift-

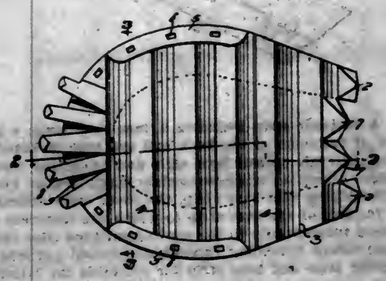
ing said head to open and closed position, spring controlled means connected with said arm for normally maintaining it in retracted position, thereby retaining said

coupling head in closed position, means for adjusting the tension of said spring controlled means, and means for maintaining said spring controlled means in adjusted position.



1,488,368. CORN HARVESTER. JOHN VENHUIZEN, Holland, Mich. Filed July 14, 1921. Serial No. 484,710. 4 Claims. (Cl. 56—100.)

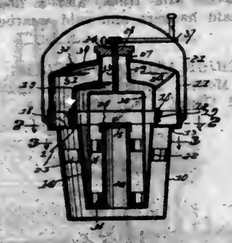
1. A corn harvester comprising a supporting structure including an axle and a platform in front of the axle, corn-severing means carried by the platform, separable fingers at the rear of said severing means and extending rearwardly beyond the supporting structure, means to hold said fingers normally yieldingly closed, and a foot lever fulcrumed upon the platform appropriately connected to move the fingers to open position against the stress of the yielding means.



1,488,369. PRINTING MECHANISM FOR MOTION-PICTURE FILMS. OTTO VOGEMAN, Brooklyn, N. Y., assignor, by mesne assignments, to Duplex Motion Picture Industries Inc., a Corporation of Delaware. Filed Feb. 10, 1921. Serial No. 443,788. 7 Claims. (Cl. 95—75.)

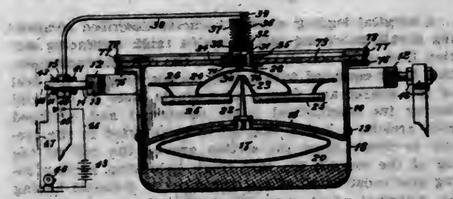
6. In a film printing machine, light varying means, an index slide operatively connected thereto, a series of cam-slides movable transversely to said index slide, and devices on said index slide adapted to be individually en-

gaged by said cam-slides, said devices having different relative positions with respect to the cam-slides engaged thereby.



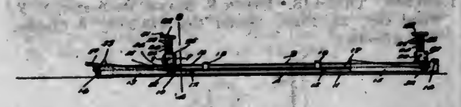
1,488,370. HORSESHOE. SARAH K. ALLISON, Macomb, Ill. Filed Aug. 26, 1921. Serial No. 495,688. 2 Claims. (Cl. 168—11.)

1. A horseshoe comprising a base plate, and a supplemental member disposed on the bottom of the base plate and composed of flexible material, said supplemental member at the forward end being provided with a plurality of forwardly projecting elements disposed in radiating relation and protruding beyond the forward end and terminating in hook members the points of which are substantially in the plane of the lower edges of the elements, the stock between adjacent elements being dished out to provide channels of tapering depth and width, whereby said elements are permitted to bend around the toe portion of the base plate when the toe only of the animal bears on the ground.



1,488,371. FREEZER. SARAH K. ALLISON, Macomb, Ill. Filed Jan. 18, 1922. Serial No. 530,093. 4 Claims. (Cl. 259—71.)

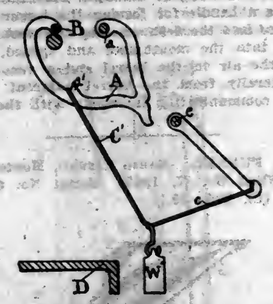
1. In a freezer, a receptacle provided with a removable cover having a flanged opening, a plug closing the flanged opening, a cylindrical drum rising axially from the bottom of the receptacle and open at its lower end and provided at its upper end with a cover closed screen, and a dasher telescoping the drum and operable in the recepta-



cle and having a stem threaded for engagement in said plug to provide for combined rotary and reciprocating movements in the receptacle.

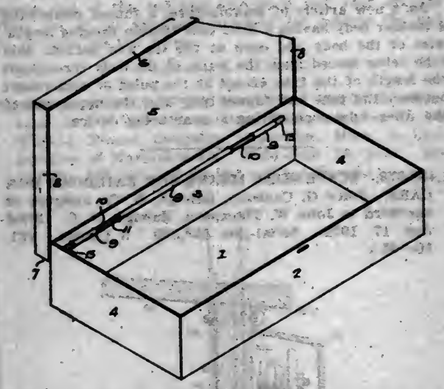
1,488,372. TELLTALE COMPASS. RAFAEL ANDRADE LALAMA, Quito, Ecuador. Filed Sept. 18, 1920. Serial No. 411,299. 10 Claims. (Cl. 33—222.)

1. In a tell-tale compass, a card, stop members adapted normally to limit the movement of said card, means for rendering said stop members inoperative to limit the movement of said card and signal means for indicating that the vessel has departed from the selected bearing to such an extent as to cause the card to reach one limit of its allotted movement.



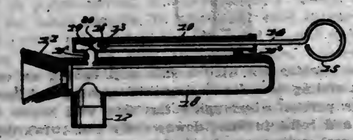
1,488,373. AUTOMOBILE JACK. CHARLES BARRELL, St. Petersburg, Fla. Filed Sept. 18, 1922. Serial No. 588,019. 2 Claims. (Cl. 254—88.)

1. An automobile jack comprising a horizontally arranged frame, a movable frame, arranged on the horizontal frame and capable of longitudinal movement thereon, inclined trackways at the end of the horizontal frame, stops carried by the latter, latch elements pivoted intermediate their ends to the frame, a U-shaped yoke pivoted to one end of the frame having its ends disposed over one end of each of the latch elements, to normally retain the same in horizontal position, the latch elements being locked for engagement with the stops and held behind the same by the yoke, the yoke being adapted to be swung away from the latch elements to permit the latter to disengage from the stops to allow the frame to gravitate.



1,488,374. COMBING MACHINE. ROBERT LESLIE BELLHOUSE, Manchester, England, assignor to The Fine Cotton Spinners and Doublers Association Limited, Manchester, England. Filed Feb. 6, 1922. Serial No. 534,535. 1 Claim. (Cl. 19—121.)

In a Nasmith comber the combination with the top detaching roller of a lever which carries the detaching roller, a notched lug on said lever below the detaching roller, a weight suspender engaging with and suspended



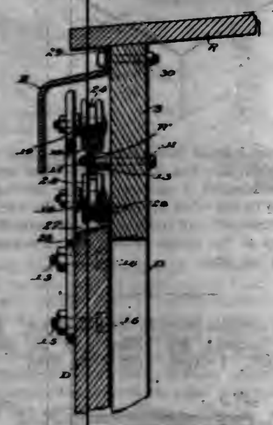
from said lug, a guide wire engaging the suspender, a fixed arm to which the guide wire is affixed and a weight attached to the lower end of the suspender.

1,488,375. HINGE CONSTRUCTION. DAVID BOWERS, Laurel Springs, N. J. Filed July 30, 1921. Serial No. 488,618. 4 Claims. (Cl. 220—31.)

1. The combination in a hinge of two sheet metal members of which one has a curled up edge and openings adjacent said edge; a second member having a depression formed to serve as a bearing for the curled up edge of the first member and having tongues extending through the openings of the latter around the adjacent portion of said curled up edge.

1,488,376. SNAKE-POISON EXTRACTOR. STEPHEN O. BRYANT, Bethany, Mo. Filed Aug. 26, 1921. Serial No. 495,686. 1 Claim. (Cl. 128—300.)

A poison extractor comprising a cylindrical barrel closed at one end and open at its opposite end, a cone shaped mouth piece inserted in the open end of the barrel and having its axis in longitudinal alinement with the axis of the barrel, said mouth piece being composed of

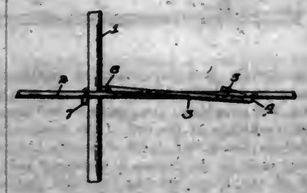


relatively rigid material and having tapered walls which are thickest at the lower smaller end of the mouth piece, the parts being so arranged that the barrel may be used as a handle for forcing the larger end of the mouth piece into the flesh whereby the wound therein is forced up into the mouthpiece and opened, means for rarifying the air in the barrel and a venom cup projecting laterally from the barrel adjacent the mouthpiece and communicating interiorly with the barrel.

1,488,377. FUNNEL. MARIO CARRAU, Montevideo, Uruguay. Filed Oct. 7, 1922. Serial No. 593,105. 1 Claim. (Cl. 226—29.)

As a new article of manufacture, a funnel comprising a tubular body having a filler tube therein ranging lengthwise of the body and open at the top and bottom, said tube being spaced from the walls of the body throughout the length of the tube except at the point of attachment between the tube and funnel body and the upper end of the filler tube constituting a puncturing device.

1,488,378. SUSPENSION MEANS FOR RAILROAD BOX CARS. JOHN G. CARROLL, Raleigh, N. C., assignor of one-third to John W. Thompson, Raleigh, N. C. Filed Apr. 17, 1922. Serial No. 553,329. 3 Claims. (Cl. 16—95.)

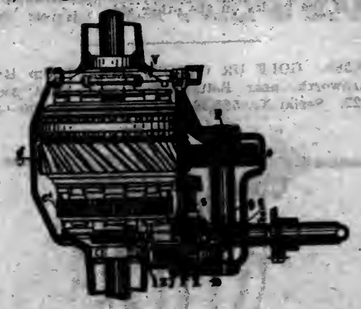


1. The combination with a side wall having an opening, of a sliding door for closing said opening and having its upper portion overlapping the side wall above said opening and being inclined downwardly and outwardly, a metal cover strip secured to the downwardly and outwardly inclined upper end of said door, a weather strip applied to said wall slightly above said door and overlapping the door, the outer surface of said weather strip being inclined outwardly and downwardly for directing any water striking the same onto said metal cover strip at a point spaced from the inner edge of the same, a track applied to said wall, hangers carried by said door and mounted on said track, and a hood overhanging said track, said hangers and said weather strip.

1,488,379. THIGH AND CALF LEGGING. IDA CHAFFEE, Missoula, Mont. Filed Aug. 4, 1923. Serial No. 655,609. 1 Claim. (Cl. 128—165.)

A surgical legging of the character described comprising a calf embracing section and a thigh embracing section formed of non-elastic fabric, the calf embracing section being equipped with a heel portion fitted to the heel of the wearer and formed of a single piece of material having its longitudinal edges reenforced and equipped with eyelets, a lacing adapted to be inserted in the eyelets to firmly draw the section around the calf of the leg of the wearer, the said thigh embracing portion being also constructed of a single piece of material having its marginal edges equipped with eyelets, a lacing for the thigh embracing section to firmly draw this section around the thigh, means attached to the upper end of the thigh embracing section to be secured around the upper end of the thigh whereby the thigh embracing section may be held in its uppermost position, the said heel embracing portion on the calf section preventing said calf embracing section from being drawn up, and connecting straps joining the top of one section to the lower portion of the other section whereby they will be held in proper relation when both of the sections are laced and applied.

1,488,380. TRELLIS. BYRON S. BLAKE, Rochester, N. Y. Filed Oct. 23, 1920. Serial No. 419,006. 5 Claims. (Cl. 47—46.)

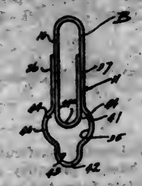


1. A trellis comprising guy wires, vertical stakes, and stake securing means entirely supported by the guy wires and loosely surrounding the stakes to hold them in vertical position while permitting the wires to move longitudinally of the stakes to free the latter.

1,488,381. CHANGE-SPEED GEAR FOR SELF-PROPELLED VEHICLES. JOHN HENRY CHAMBERS, Belfast, Ireland. Filed Jan. 27, 1921. Serial No. 440,460. 13 Claims. (Cl. 74—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Change speed gear of the character described comprising in combination an encircling driving member, an

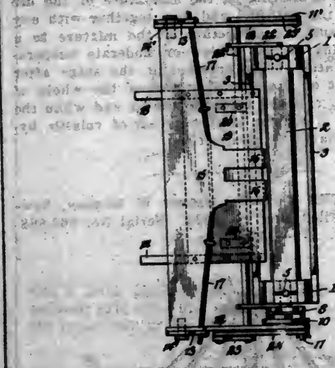
epicyclic gear arranged internally thereof, and a secondary driving gear external to and independent of the epicyclic gear, said gear being adapted to be engaged with and



disengaged from one of the members of the epicyclic train so as to give changes of speed additional to those given by the epicyclic train itself and a reverse, substantially as described.

1,488,382. CLOTHESPIN. ROBERT O. CROW, Goldsboro, N. C. Filed Mar. 16, 1922. Serial No. 544,197. 7 Claims. (Cl. 24—139.)

1. As an article of manufacture, a clothespin having spring arms extending to provide end arms and an intermediate arm, said intermediate arm being disposed nearer to one of said end arms than the other end arm.



1,488,383. PAPER CLIP. ROBERT O. CROW, Goldsboro, N. C., assignor of three-tenths to Hugh Gordon Maxwell, jr., Goldsboro, N. C. Filed Dec. 8, 1922. Serial No. 605,669. 8 Claims. (Cl. 24—261.)

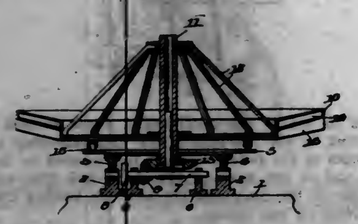
1. A fastening clip comprising outer and inner frame portions each including spaced sides lying in the same plane and being connected at an end of said clip, said outer portion having an end thereof bulged laterally to provide an enlarged eye opening, the free end of said inner frame portion extending partly into said enlarged eye opening.

1,488,384. WRINGING MACHINE. JOSEPH DECELLES, Woonsocket, R. I. Filed Nov. 17, 1922. Serial No. 601,554. 3 Claims. (Cl. 68—32.)

3. In an automatic feeding mechanism, the combination of wringer rolls, pressure regulating means above the rolls, gears formed on one end of each roll, a shelf extending at one end into the bite of the rolls, a feeding table arranged on the shelf and comprising fingers adapted to be moved over the shelf, means for locking the feeding table on the shelf, links extending from the table, a cam having a pin secured thereto and also being

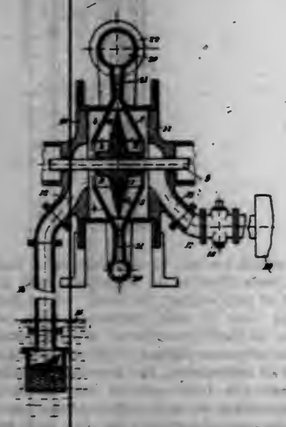
secured to one of the roller gears, a rod secured by a short link to the last-named link and extending across the length of the rollers, a short link secured to the opposite end of the rod and also to a link that extends from one of the pins, and brackets for holding the rod in position on the frame.

1,488,385. PENCIL WITH FLOATING CLUTCH. WILLIAM P. DE WITT, Somerville, Mass., assignor to De Witt-La France Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1921. Serial No. 503,149. 18 Claims. (Cl. 120—18.)



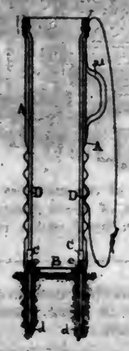
12. A pencil having, in combination, a casing, a guide tube for leads therein, an alignment tube fitting in the front end of said casing, the front end of said guide tube fitting the bore of said alignment tube, whereby said guide tube is fixedly positioned in said casing, an auxiliary guide tube constituting a clutch located adjacent the front end of said casing, the rear end of said clutch projecting into the front end of said guide tube and a lateral projection on said clutch projecting into a hole provided in said alignment tube, said projection forming a loose fit in said hole, whereby said clutch is allowed a limited lateral movement at its rear end, the front end of said clutch being out of engagement with said casing and free to swing laterally thereof.

1,488,386. REDUCTION OF ORES. EDOUARD PERCY CRANWILL GROUARD and FREDERICK WILLIAM SALISBURY-JONES, London, England. Filed Aug. 11, 1923. Serial No. 656,904. 2 Claims. (Cl. 75—14.)



1. A method for reducing ores comprising a preliminary treatment, consisting in the admixture of the ore and fuel, or of the ore, fuel and flux, together with any other re-agent and the subjection of the mixture to a preliminary coking process at low or moderate temperature, the distillation being arrested at the stage after the greater part or the whole or almost the whole of the tar has been removed from the charge and while the residue contains a substantial proportion of volatile hydrocarbons, substantially as described.

1,488,387. WATER MOTOR. GEORGE W. GORDON, Newcastle, Ind. Filed May 26, 1922. Serial No. 563,888. 1 Claim. (Cl. 170—117.)



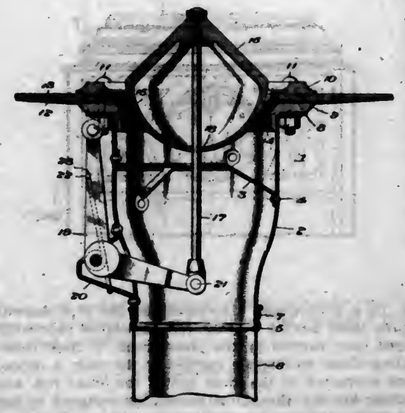
A water wheel of the class described comprising supporting means, a frame mounted on the supporting means to rock about a horizontal axis, a drive shaft mounted on the supporting means and arranged in the same plane as the axis of the frame, an annular track forming part of the frame, a shaft arranged to rock on the drive shaft, a wheel having its hub fitting over the second shaft, gears connecting the drive shaft with the hub, a float at the periphery of the wheel, paddles on the bottom of the float and rollers on the wheel for engaging the track.

1,488,388. CENTRIFUGAL PUMP. PAUL HARIVEAU, Paris, France. Filed Aug. 2, 1920. Serial No. 400,783. 3 Claims. (Cl. 230—14.)

1. A centrifugal pump comprising two cover plates carrying an intake branch sloping at an angle of 45 degrees, a delivery volute adapted to be rotated at will along its median plane, a rotor provided with two bladings arranged on either side in such a way that, the free outlet from the blades on one side is opposite the solid parts of the blades on the other side.

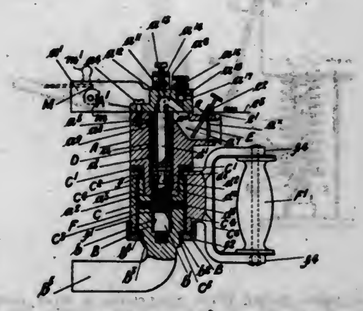
1,488,389. GOLF OR CADDIE BAG. DAVID HIBBERT, Farnworth, near Bolton, England. Filed Aug. 29, 1922. Serial No. 585,062. 1 Claim. (Cl. 150—1.5.)

In a golf bag the combination with the bag of a plurality of stiff rigid uprights secured to the top of the bag and passing down through the bottom to form spikes to enter the ground, ferrules in the bottom of the bag to sheath the spike at the end of the uprights when retracted, the bag being capable of contracting around the bottom as the spikes are pushed into the ground and expanding again under the weight of the clubs when withdrawn from the ground, retracting the spikes within the ferrules, a stationary laterally projecting base affixed to each ferrule, means for securing the ferrule and its base to the bag, a rotary shutter provided with an aperture pivoted to the base of the ferrule to close the ferrule, a ball stop and spring to control it inserted between the ferrule base and shutter the latter provided with indentations to receive the ball to retain it in the closed or in the open position so required.



1,488,390. INDEX OR MEANS FOR INDICATING THE DUTIES AND OTHER DATA RELATING TO PERSONS OR OBJECTS. ARTHUR HILL-TREVOR GLENNY, Portsmouth, England. Filed Apr. 9, 1923. Serial No. 630,862. 16 Claims. (Cl. 40—19.)

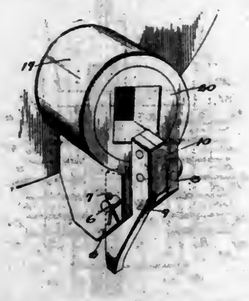
1. An index, for indicating particulars of persons or objects, comprising a base, a plurality of rods, adapted to be secured to and project from the said base, a plurality of differing types of indicators, each type being adapted to convey a different kind of information, and to be mounted on the said rods and means detachably secured to the rods for retaining a plurality of the said articles on each rod, substantially as set forth.



1,488,391. VALVE. MINARD C. HOSKIN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 22, 1921. Serial No. 494,283. 3 Claims. (Cl. 251—144.)

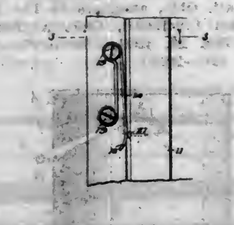
3. A valve comprising a discharge tube, a plurality of annular members adapted to secure the walls of a discharge opening of a container between them mounted upon the discharge tube, one of said members having an interiorly threaded surface, a hard rubber annular seat screwed into the threaded member, a valve head of pliable material adapted to engage the seat, a valve

stem rigidly secured to the valve head, a bell crank arm pivotally secured to the valve stem and pivotally mounted upon the discharge tube and a spring mounted to engage the bell crank arm and its support tending to always maintain the valve in closed position.



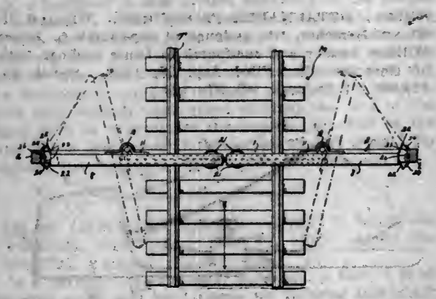
1,488,392. ELECTRICAL CIRCUIT BREAKER. WILLIAM HENRY ILLINGWORTH, Halifax, England. Filed Oct. 27, 1920. Serial No. 419,834. 9 Claims. (Cl. 200—113.)

1. In an electrical cut-out, the combination of a tubular core of insulating material, two metal carrier portions encasing said core, insulating material preferably mica separating and insulating said carrier portions from one another, a metal sleeve encircling said carrier portions and securing same together and insulating material preferably mica interposed between the sleeve and the carrier portions and insulating the sleeve therefrom.



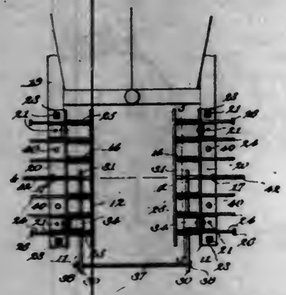
1,488,393. PLUG RETAINER. FRED W. JACKSON, Needles, Calif. Filed Mar. 31, 1923. Serial No. 629,128. 6 Claims. (Cl. 220—36.)

1. A device of the character described comprising a frame consisting of a web portion adapted to be secured to the outer wall of a tubular member at one end of the latter and having a pair of laterally extending arms,



and a latch pivotally supported intermediate its length between said arms and extending at its inner end beyond the inner wall of the tubular member.

1,488,394. WINDOW TIGHTENER. HANS ESBESEN THEODOR JENSEN, Mineola, N. Y. Filed Mar. 4, 1922. Serial No. 541,187. 6 Claims. (Cl. 292—76.)

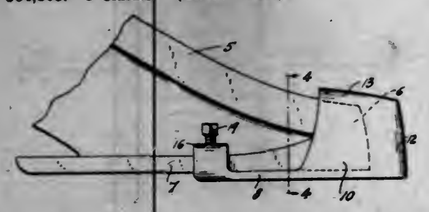


1. A window tightener of the character described, comprising a base plate, a ring formed on the lower end of the base plate, a spring arm integral with the base plate, and a second ring member formed at the junction of the base plate and the spring arm.

1,488,395. DOOR STRUCTURE. VOLEY A. JOHNSON, Ironton, Ohio, assignor of one-half to Lawson Blenkinsopp, Lexington, Ky. Filed Aug. 23, 1923. Serial No. 659,010. 6 Claims. (Cl. 246—304.)

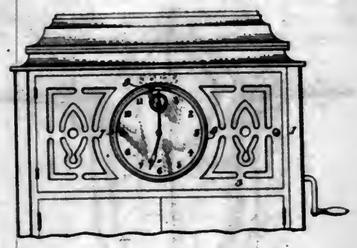
8. A door structure comprising a frame, means for supporting said frame for swinging movement, automatic means for normally maintaining the frame in a predetermined position, a door slidably supported by the frame, and automatic means for normally maintaining the door at the limit of its sliding movement in one direction.

1,488,396. SAFETY APPARATUS. WILFRED S. JOHNSON, New York, N. Y. Filed July 21, 1923. Serial No. 653,051. 8 Claims. (Cl. 293—16.)



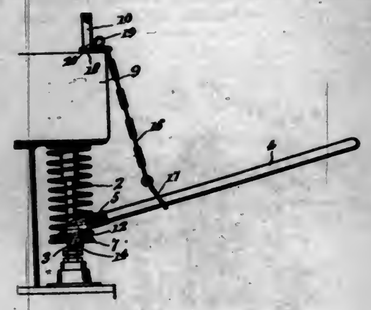
1. For a vehicle, a safety apparatus comprising opposed elements, springs which exert themselves against said elements to effect the movement thereof toward each other, releasing means for maintaining said elements in inactive positions and operable to allow said elements to be acted upon by said operating means, and means for compressing said springs.

1,488,397. PAIL. MICHAEL JUDGE and WALTER J. HICKMAN, Cincinnati, Ohio, assignors to The Eagle-Picker Lead Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 29, 1921. Serial No. 511,243. 2 Claims. (Cl. 220—20.)



1. In a device of the class described, the combination of a pail, bail plates on the pail, a group of sectional containers in the pail, brackets on the sectional containers to support a brush, a bail engaging the bail plates, the bail and bail plates being adapted to lock the bail and pail against relative movement when the pail is suspended from the bail, lugs on the ends of the bail to preclude the separation of the bail and bail plates.

1,488,398. DETACHABLE PLOWPOINT. WILLIAM H. KLINE, Herscher, Ill., assignor of one-fourth to James William Amidon and one-fourth to Louis Lochner, both of Herscher, Ill. Filed Aug. 28, 1922. Serial No. 584,805. 3 Claims. (Cl. 97—125.)

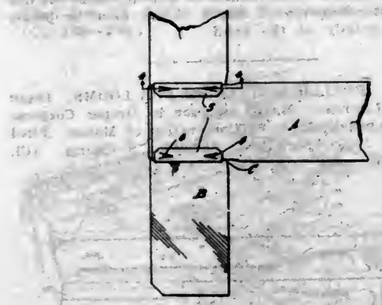


1. In combination with a plow share having a sole flange, a plow point including a body member having one end portion thereof formed into a socket adapted to receive a portion of the plow share, the opposite end portion of said body member having a clip arranged to engage the sole flange of the plow share.

1,488,399. AUTOMATIC STARTER FOR PHONOGRAPHS. JOHN LUKASZEWSKI, Chicago, Ill. Filed Feb. 24, 1923. Serial No. 620,954. 4 Claims. (Cl. 161—23.)

1. In a phonograph attachment of the type described, a turn table having a brake rod associated therewith, a hinged door carried by the phonograph, a clock case including alarm mechanism carried by the door, a rotatable block connected to the inner end of the brake rod, and a winding key for the alarm mechanism adapted to interlock with the block for shifting the block and brake rod when the alarm mechanism is released.

1,488,400. VALVE LIFTER. ARVE ROBERT MCCANTS and ALEXANDER JACKSON CORNETT, Shreveport, La. Filed May 3, 1923. Serial No. 636,400. 2 Claims. (Cl. 29—86.3.)



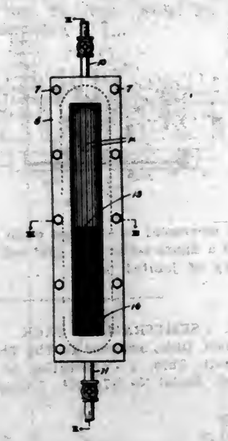
1. A valve spring lifter comprising a lever composed of a handle having an enlarged head with a semicircular inner wall adapted to embrace the valve spring, lugs projecting at substantially right angles down from the outer free ends of the semicircular wall, said lugs being elongated and having flanges projecting inwardly toward one another and having relatively small upper areas with beveled inner edges, and means to support said lever and to provide a fulcrum therefor.

1,488,401. T SQUARE. EDWARD M. MCCRACKEN, Scranton, Pa. Filed July 12, 1921. Serial No. 484,181. 3 Claims. (Cl. 33—112.)

1. A fastening device for T squares and the like comprising a plate of suitable sheet metal having a pair of oppositely disposed projecting arms turned inwardly toward one side of said plate and a second pair of arms

turned inwardly toward the opposite side thereof, each arm having a portion parallel with said plate and spaced

therefrom and means for securing said inwardly turned portions to an object disposed between the plate and the said inturned portions.



1,488,402. CAN OPENER. LEO GREGORY MCKELLOPS, St. Louis, Mo. Filed July 5, 1922. Serial No. 572,864. 4 Claims. (Cl. 30—3.)

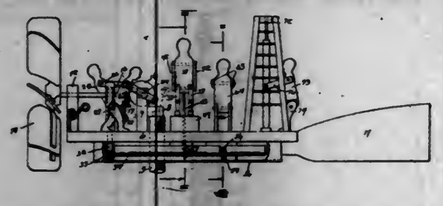
1. A can opener, comprising a shank, an adjustable cutting blade on said shank, and a projection on one of said parts arranged so that it will be moved into locking engagement with the other part to retain the blade in adjusted position by the operation of forcing the blade into the can head.

1,488,403. GAUGE COVER. GEORGE D. MACBETH, Pittsburgh, Pa., assignor to Macbeth-Evans Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,713. 4 Claims. (Cl. 73—54.)

1. A cover for a liquid level gauge, comprising an elongate body of transparent material having a totally reflecting portion on its rear surface terminating abruptly at its lower end in a line which is visually non-coincident with a line lying in the general plane of said surface perpendicular to the longitudinal extent of the cover,

whereby the lower end of the totally reflecting portion of the rear surface is sharply defined in other than a horizontal line.

1,488,404. VAPOR-BATH CABINET. HARRY M. MONFORD, Lebanon, Pa. Filed Dec. 20, 1922. Serial No. 607,974. 2 Claims. (Cl. 4—163.)



1. A vapor bath comprising a cabinet having a hinged top and a hinged side, openings formed in the sides and in the top, manually-slidable means disposed at the interior of the cabinet for opening or closing said openings, a hammock in said cabinet supported on the bottom of the same, a steam pipe extending within said cabinet between the hammock and the top, a medicament pipe connected with said steam pipe at their inner ends, an exhaust pipe also connected with said steam pipe and the medicament pipe, the exhaust pipe and the medicament pipe crossing each other adjacent the foot of the vapor bath to concentrate the heat at the foot of the bath, and a drain cock at the bottom of said cabinet for draining the condensed vapor collected in the bath.

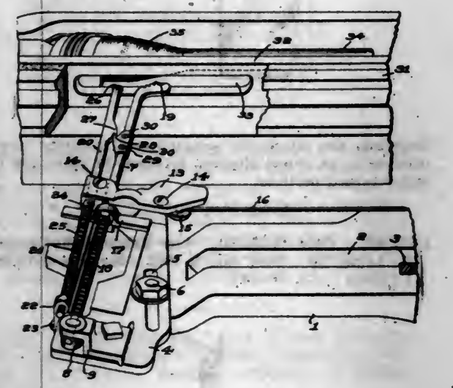
1,488,405. MECHANICAL SIGN. ARTHUR S. MOON, San Francisco, Calif. Filed Sept. 1, 1923. Serial No. 660,572. 1 Claim. (Cl. 40—139.)

In a device of the character described, a base, a shaft mounted above said base, means for rotating said shaft, a shaft mounted below said base and rotatably connected to said first mentioned shaft, a crank mounted at right angles to said first mentioned shaft, figures pivotally secured to said crank, means for driving said crank from said first mentioned shaft, a plurality of pins mounted in

said second mentioned shaft, a lever adapted to be engaged by said pins, a vertical rod adapted to be contacted by said lever, resilient means mounted on said rod for giving a

vibratory movement to said rod when said rod is reciprocated and a figure secured to said rod, said figure having a plurality of jointed parts.

1,488,406. SEMITRAILER JACK. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 19, 1920. Serial No. 374,882. 7 Claims. (Cl. 254—86.)

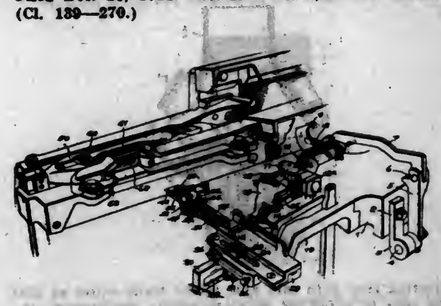


3. A device for swinging up the jacks in semi-trailers, comprising a shaft, elements extending from said shaft intermediate its ends, flexible connections from said elements to the jacks, with said elements located with reference to the jacks, such that the flexible elements wind up on the shafts, outside of the extending elements, means for rotating the shaft from either end thereof, a ratchet lock for the shaft, and means at either end of the shaft for releasing said ratchet.

1,488,407. INFANT'S BAND. HARRIET LYONS REDMOND, Boston, Mass., assignor to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed May 2, 1922. Serial No. 557,917. 2 Claims. (Cl. 2—111.)

2. An infant's shirt or band having a seamless, tubular, knit body portion the lower edge thereof being formed as substantially a straight line transversely of the band, a narrow continuous strip comprising a plurality of thicknesses of knitted fabric secured along the upper edge only thereof upon the inner face of said body portion and terminating short of said straight lower edge of the body portion, said strip being adapted to receive pins or the like for the attachment of a diaper at any point or points circumferentially of the band.

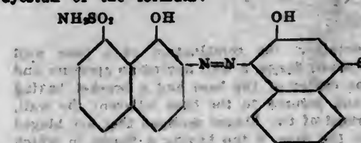
1,488,408. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 4, 1923. Serial No. 636,557. 8 Claims. (Cl. 139—230.)



1. In a feeler mechanism for looms, the combination of a main feeler which is mounted to enter the shuttle in a direction inclined to the longitudinal axis thereof and for movement longitudinally along the filling carrier to call the change of filling, an auxiliary feeler mounted for independent movement towards and from the front of the loom and restrained from movement longitudinally of the filling carrier, and interlocking connections between the main and auxiliary feelers which prevent premature movement of the main feeler longitudinally of the filling carrier when the auxiliary feeler moves frontwardly on a detecting beat before the main feeler is moved and which are disengaged when the main feeler moves frontwardly before the auxiliary feeler is so moved.

1,488,409. METHOD OF AND APPARATUS FOR CURING INNER TUBES. WILL C. STATE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 16, 1920. Serial No. 403,726. 3 Claims. (Cl. 18—42.)

1. A method of curing inner tubes that comprises disposing the tube on an expansible bag, placing the bag and the tube in a casing and inflating the bag with steam to apply pressure to the tube and heat to cure it.



1,488,410. FEELER MECHANISM FOR LOOMS. MELVIN L. SZOKA, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 26, 1922. Serial No. 608,860. 9 Claims. (Cl. 139—270.)

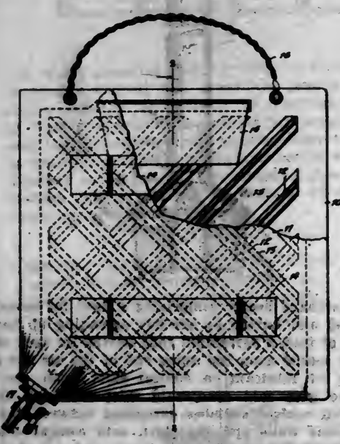
1. In a filling replenishing loom, a convertible side swipe and penetrating feeler mechanism, comprising, in combination, a carrier mounted for movement towards and from the front of the loom, a feeler on the carrier, an actuator having a normal stroke towards and from the front of the loom, filling penetrating pins carried by the feeler and engaging the actuator and means for detachably connecting the feeler and actuator.

1,488,411. DYESTUFFS CONTAINING CHROMIUM AND PROCESS FOR MANUFACTURE OF SAME. FRITZ STRAUB, Basel, and HERMANN SCHNEIDER, Riehen, near Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 18, 1923. Serial No. 669,402. 13 Claims. (Cl. 260—12.)

8. As a new product the herein described new dyestuff containing chromium which is a derivative of the azo dyestuff of the formula:

which forms a bronze powder soluble in pure water to a blue to green black solution and in dilute caustic alkalies to a blue violet solution, dyeing wool in an acid bath blue to green blue tints of excellent uniformity, prominent fastness to light, and very good fastness to fulling.

1,488,412. CIGARETTE HOLDER. ALESSANDRO TARABORRELLI, Providence, R. I. Filed Sept. 27, 1919, Serial No. 326,701. Renewed Jan. 14, 1924. 1 Claim. (Cl. 131—10.)

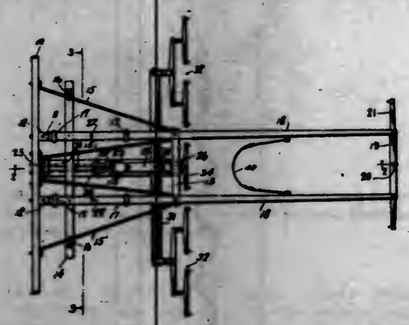


A holder of the class described comprising a tube, a pin projecting therefrom, a body divided longitudinally into two halves, with each half pivoted on the pin intermediate the ends, clamping members at the front ends of said halves, handle members at the rear ends of said halves (and spring means on the pin and engaging the lower parts of the halves) for forcing the clamping members into engagement with the article held by the tube.

1,488,413. FIRE ESCAPE. WILLIAM R. TOWSE, Columbus, Ohio. Filed Nov. 21, 1923. Serial No. 676,142. 4 Claims. (Cl. 227—32.)

1. A fire escape comprising a spiral member, and means for swivelly and yieldably connecting the upper and lower ends of said member in vertical position.

1,488,414. CLOTHES-WASHING DEVICE. JOHN E. VAIL and CHARLES E. STUBER, Garden Grove, Iowa. Filed Apr. 17, 1923. Serial No. 632,804. 6 Claims. (Cl. 68—8.)



1. A clothes washing device consisting of a waterproof bag adapted to contain the clothes and washing water, and rubbing ribs on the bag in position to have rubbing contact with the clothes by a relative movement of the sides of the bag.

1,488,415. DRAFT EQUALIZER. LOUIS B. VARING, Volin, S. Dak. Filed July 31, 1923. Serial No. 655,794. 2 Claims. (Cl. 278—3.)

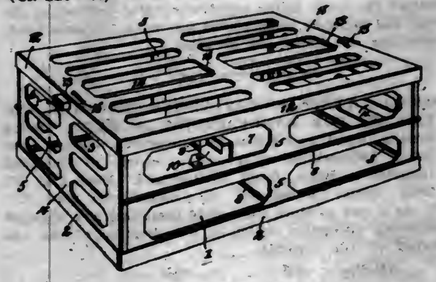
1. The combination with a machine frame including forwardly extending tongues and spaced transverse members connecting the tongues, of a draw bar, means connecting the opposite ends of the draw bar to the trans-

verse members centrally and below the plane of the tongues, a lever pivotally secured to the draw bar, a main equalizer bar extending transversely between the tongues

and draw bar, a connection between the draw bar and lever, draft gear connected to the lever and draft gear connected to the equalizer bar.

1,488,416. ORCHARD HEATER. PIET VLAG, West Tampa, Fla. Filed Aug. 25, 1923. Serial No. 659,422. 5 Claims. (Cl. 158—91.)

1. An orchard heater comprising a bowl for containing liquid fuel and having an air flue extending up through the body of fuel, a perforated cone having its apex closed, said cone seated upon the upper end of the air flue above the body of lubricant, a conical skirt upon the bowl concentric with said cone, said skirt enclosing an uninterrupted conical chamber extending between the perforated cone walls and the skirt, said conical chamber being directly above the fuel body, and an elongated chimney upon the upper and smaller end of the skirt.



1,488,417. GAS MIXER FOR INTERNAL-COMBUSTION ENGINES. KURT VOLS, Heidelberg, Germany. Filed June 8, 1921. Serial No. 475,992. 4 Claims. (Cl. 48—180.)

1. A rotating air inlet and gas mixture regulator for internal combustion engines comprising in combination with the suction pipe of the motor being enlarged at a determined part and having air inlet holes in this enlarged part, a blade wheel arranged so that it revolves above said air inlets, the axle of said blade wheel mounted so that it can move in vertical direction, an adjusting ring upon said air inlets, conical studs downwardly projecting from the lower surface of said adjusting ring and engaging with said air inlets, means for connecting said

adjusting ring with said axle of the blade wheel so that said ring is lifted off said air inlets according to the movement of said blade wheel.

1,488,418. CRATE. FREDERICK WALTHER, Omaha, Nebr. Filed Aug. 3, 1923. Serial No. 655,494. 3 Claims. (Cl. 220—7.)

1. In a container, the combination of a base wall having an upturned flange, a wall having an aperture and secured to the center of the base and a bracket having an aperture and secured to the base adjacent the wall, side walls formed of two hinged sections that are hinged at one end to the base, a top having a flange in which slots are provided, and a bar having apertures therein and adapted to seat in the slots of the walls and bracket, substantially as and for the purpose set forth.

1,488,419. LEVEL. IRVIN P. WARD, Chicago, Ill. Filed Mar. 13, 1922. Serial No. 543,300. 3 Claims. (Cl. 33—211.)

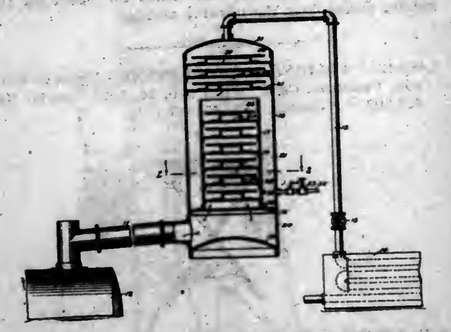
1. As a new article of manufacture, a spirit containing vial for spirit levels formed substantially in the form of the middle frustum of a prolate spheroid.

1,488,420. FUSE PLUG. WALTER WATTS, New York, N. Y. Filed Feb. 16, 1922. Serial No. 537,045. 2 Claims. (Cl. 200—130.)

1. In a fuse plug, a plug body having diametrically disposed sockets and spaced lugs projecting from one end, insulated terminal contacts on the opposite end, spring

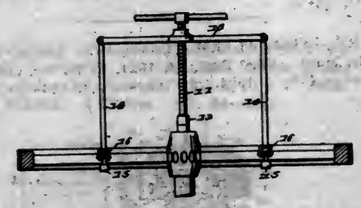
contact fingers arranged within the sockets and connected to said terminal contacts, a detachable head having a recess for the reception of the lugs, spaced contact legs adapted to enter the sockets and frictionally engage the spring finger contacts for retaining the head in associated relation with the plug body, said legs having extensions

respectively arranged in the opposite ends of the recess, and a detachable fuse element positioned over the lugs with its opposite ends in clamping engagement between the leg extensions at the end of the recess and the outer sides of the lugs to establish electrical communication with the plug terminal contacts.



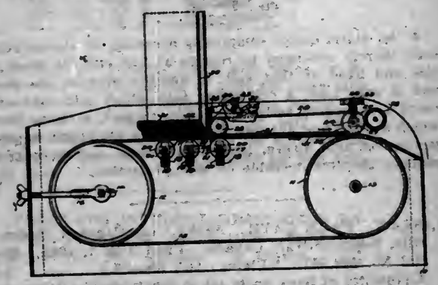
1,488,421. WINDSCREEN. GEORGE WELCH, Perth, Western Australia, Australia. Filed Apr. 18, 1922. Serial No. 554,485. 3 Claims. (Cl. 296—92.)

1. A windscreen comprising the combination of supporting standards; a screen section; a hollow cone attached thereto bearing against a conical surface on its outer face; another screen section, a cone attached thereto bearing against the inner face of the hollow cone; and means whereby the conical bearing faces can be held in frictional contact so that the screen sections may be supported in any desired relative positions.



1,488,422. CONDENSER. ARTHUR K. WHITELAW, Louisville, Ky., assignor to Standard Oil Company of Kentucky, Louisville, Ky., a Corporation of Kentucky. Filed Feb. 16, 1922. Serial No. 536,993. 5 Claims. (Cl. 261—114.)

1. A condenser of the class described, comprising an outer casing, an inner casing of similar but smaller cross section and shorter in length than the outer casing, means for supporting the inner casing concentric with the outer casing with its ends spaced a distance from the ends of the latter and for closing the area between the lower end of the inner casing and the wall of the outer casing, baffling means mounted in the outer casing and positioned above the inner casing, means for con-



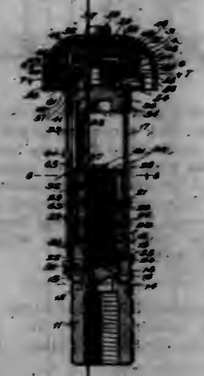
veying liquid into the outer casing to flood the inner casing, vapor inlet and liquid outlet means connected with the lower end of the outer casing and vapor outlet means leading from the upper end of the outer casing.

1,488,423. WHEEL PULLER. WINTHROP H. WILCOX, New Haven, Conn., assignor of three-fifths to Stephen W. Spencer, New Haven, Conn. Filed July 12, 1921. Serial No. 484,068. 1 Claim. (Cl. 29—85.)

A wheel removing jack for vehicles having a crossbar carrying a central jack screw and tensile members connected with the terminals of the cross head and provided at their free ends with buttons for engaging and spanning the intervals between adjacent spokes of a wheel to be removed, said buttons being connected with the tensile members by universal joints adapting them to lie in parallelism with the tensile members when inserted between the spokes of the wheel.

1,488,424. MAIL-MARKING MACHINE. OSCAR DELLMONT WILLIS, Huntington, W. Va. Filed Nov. 9, 1922. Serial No. 599,879. 8 Claims. (Cl. 101—242.)

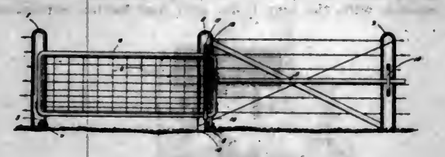
1. In a machine of the character described for canceling stamps, a drum, an endless belt operated by said drum, a printing member, an endless belt for operating the printing member and driven by engagement with the



first endless belt, spacing means for controlling the feeding of the letters on to said endless belt so that the letters reach the printing member at a predetermined instant in its revolution, and means for operating the spacing means from the printing member.

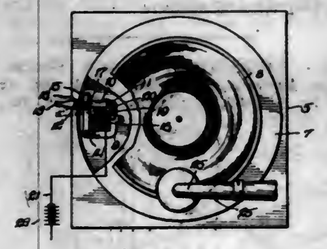
1,488,425. FOLDING SERVING STAND. THOMAS WILSON, Pasadena, Calif. Filed Feb. 26, 1923. Serial No. 621,303. 1 Claim. (Cl. 45—11.)

In a device of the character described, a stand having parallel spaced top members, flexible bands extending between said top members and having their ends secured thereto, annular recesses formed in each of said top members, pads of greater thickness than the thickness of said top members, said pads being adapted to rest upon said flexible bands, and means for securing said pads to said top members, said means comprising curved metal portions adapted to lie in said annular recesses, and having a straight end secured to said pads.



1,488,426. TIRE ALARM. CHARLES A. BAKER, Great Falls, Mont. Filed Sept. 14, 1921, Serial No. 500,505. Renewed Feb. 6, 1924. 9 Claims. (Cl. 116—34.)

4. An alarm device comprising a casing, an elongatable tube therein arranged to receive at one end air from a tire and fixed at that end, a metallic plug in the free end of said tube, a coil spring into which said tube extends arranged to resist elongation thereof, a sleeve into which said spring extends connected to said plug, a projection on said sleeve, indicating means, and a control member therefor operable by said projection.

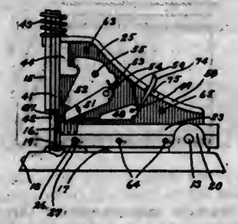


1,488,427. FARM GATE. ARDEN CARL CARLSON, Recanville, Saskatchewan, Canada. Filed Aug. 1, 1921. Serial No. 488,991. 1 Claim. (Cl. 89—35.)

A plurality of fence posts set in longitudinal alinement, a gate frame having an extension at one end in alinement with the frame, said frame and extension being one integral continuous piece bent into shape, brackets secured to the lower corners of said frame and carrying said rollers, rollers at each end of said frame, a vertically-disposed roller mounted on the intermediate post and between which and said post the said frame is mounted to slide,

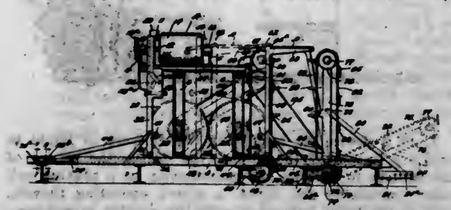
and a guide for said extension mounted on one of said posts and brackets in which the upper and lower ends of said roller are rotatably mounted.

1,488,428. ELECTRIC STOP FOR PHONOGRAPHS. WILLIAM R. DUNCAN, Chicago, Ill. Filed Feb. 1, 1923. Serial No. 616,335. 9 Claims. (Cl. 192—123.)



1. An electric switch member for an Edison phonograph having a reproducer with a floating weight, comprising a support, an insulated contact member carried by said support, and a second contact member adapted to be connected with the floating weight and actuated thereby for making contact with the first named contact member.

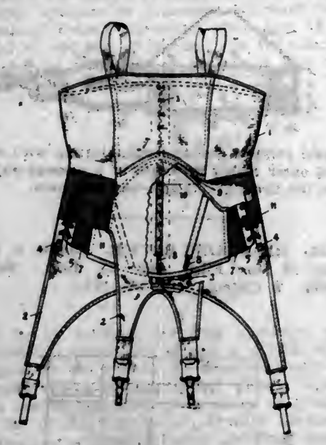
1,488,429. SAFETY APPARATUS FOR RAILWAY CROSSINGS. LUTHER R. HILL, Colorado Springs, Colo. Filed Mar. 27, 1923. Serial No. 627,972. 4 Claims. (Cl. 246—293.)



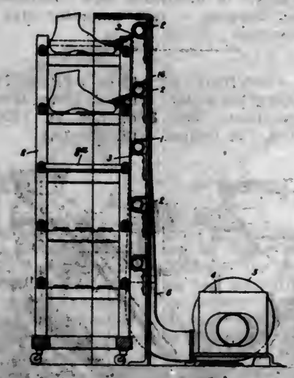
1. In a safety apparatus for railway crossings having automatically operated gates and an actuating trip apparatus operated by contact with the approaching train, the combination of a release and gate opening mechanism comprising a frame secured to the ties near the crossing, a locking appliance consisting of a rod and cable connection with said gates, an inclined catch piece secured to said rod, a hooked catch lever above said catch piece and provided to engage it as the gates are pulled shut by said rod and cable and hold said rod from releasing, and a tripping trigger provided to be engaged by the passing cow catcher of the locomotive and to release said catch lever from said catch piece, for the purposes specified.

1,488,430. STAPLE BINDER. BERTHOLD JAHN and ERNEST EMIL KAHL, New Britain, Conn., assignors to The B. Jahn Manufacturing Company, New Britain, Conn., a Corporation. Original application filed Nov. 25, 1916, Serial No. 133,357. Divided and this application filed Mar. 19, 1920. Serial No. 367,289. 2 Claims. (Cl. 1—23.)

1. In a stapling machine, a main casing provided with an interior recess, a plunger passing therethrough, a pivoted staple-feeding means, a pivoted staple-holding means beneath said staple-feeding means and adapted to engage said staple-feeding means by upward movement, the said staple-holding means being freely movable on its shaft and being provided with an integral arm extending rearwardly through an opening in the casing and constituting a handle which is arranged and located to be grasped by one hand simultaneously with said casing, thereby simultaneously releasing both the staple-feeding and the staple-holding means.



1,488,431. SHEET-METAL-PLATE-HANDLING MACHINE. MILE KUKULJ, Farrell, Pa. Filed June 7, 1923. Serial No. 643,955. 41 Claims. (Cl. 214—6.)

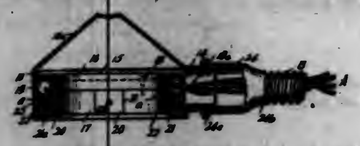


1. In a sheet metal plate handling machine, a continuously moving conveyor, means for removing the plates from the conveyor and stacking same, said conveyor including a series of horizontally alined endless belts, gear connections between the endless belts, a pair of guide rollers preceding the endless belts, gear connections between the guide rollers and the adjacent endless belt section, driving means for the guide rollers continuously operating the endless belts, the means for removing the plates from the conveyor including a transversely shiftable frame structure carrying vertical bars disposed between the endless belt sections, a vertical slide rod carried by each bar having a bead at its upper end normally projecting above the endless belt sections for engaging the adjacent edge of a plate, trigger mechanism associated with each bar adapted to be operated when the bar reaches its limit of operative movement to lower the rod bead to permit return of the bar beneath a plate being fed by the endless belt.

1,488,432. BRASSIÈRE. JOSEPH LEONARD, Allentown, Pa., assignor to Fifth Avenue Corset Company, Inc., Allentown, Pa., a Corporation of New York. Filed May 12, 1922. Serial No. 560,296. 4 Claims. (Cl. 2—72.)

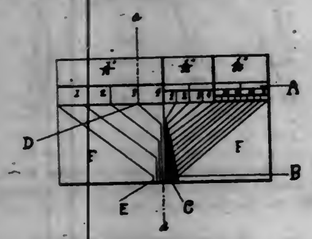
1. In combination, a brassière comprising a soft fabric bodice which completely encircles the body, and a continuous stiffened reducing band which is located under the lower portion of the front of the brassière and connected for vertical adjustment at its sides to the brassière, and flexible means connecting the reducing band at its middle to the brassière.

1,488,433. METHOD AND APPARATUS FOR DRYING THE TOES OF BOOTS AND SHOES. DAVID BAIRD MACDONALD, Leicester, England. Filed July 7, 1919. Serial No. 308,946. 4 Claims. (Cl. 34—36.)



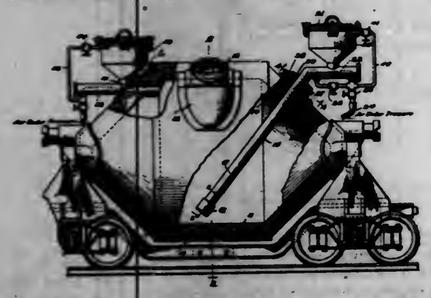
3. An apparatus for treating boots and shoes by localized air currents comprising one or more air pipes each having one or more nozzles or orifices therein, means for supplying warmed air under pressure to said pipes, means to support said pipes, and means for moving said pipes to change the direction of the issuing air jets relatively to the work.

1,488,434. TIMER FOR INTERNAL-COMBUSTION ENGINES. EMIL F. PFISTER, Avant, Okla. Filed July 31, 1920. Serial No. 400,432. 3 Claims. (Cl. 200—19.)



1. A distributing cap for timers or ignition apparatus comprising an outer casing formed with a laterally-extending neck, an insulated annular block removably arranged in said casing and including a section formed with an annular groove in its inner side and a second section formed with recesses in its inner circumference

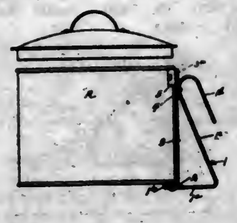
held on the first-mentioned section against the side formed with said annular groove to tightly close the



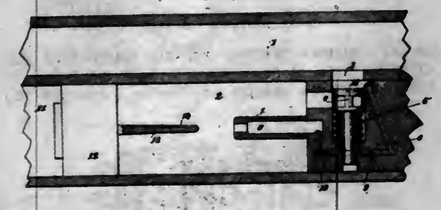
same, said annular groove communicating with said neck and said outer casing by means of a passage-way formed between the two sections adjacent said neck.

1,488,435. MEASURING DEVICE. JULIUS A. PICKENS, Easley, S. C. Filed Aug. 27, 1920. Serial No. 406,369. 3 Claims. (Cl. 33—111.)

1. In a measuring device provided with a calibrated dial and a serrated measuring edge having channeled graduation lines commencing in said serrations and extending parallel from said measuring edge for consecutively varying distances to points of divergence, thence from said points of divergence said channeled graduations extend fan-wise to said calibrated dial, substantially as described.



1,488,436. METHOD OF AND APPARATUS FOR TRANSPORTING SLAG. JOHN D. PUGH, Mount Washington, Baltimore, Md. Filed Apr. 28, 1920. Serial No. 377,211. 16 Claims. (Cl. 22—79.)

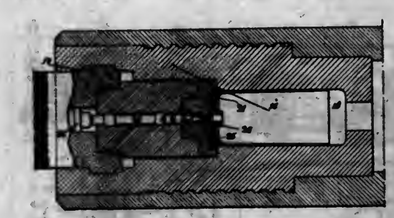


1. In a device for transporting molten material, in combination, a ladle, and means including a pipe adjustably mounted on said ladle and having an orifice within the same for introducing combustible material into the slag at any desired depth below its surface, for the purpose set forth.

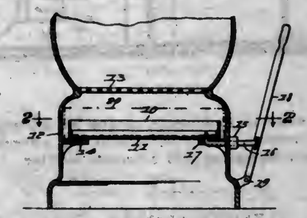
1,488,437. BRACKET. WILLIAM P. RHOADS, New Bethlehem, Pa. Filed May 19, 1922. Serial No. 562,176. 4 Claims. (Cl. 248—20.)

4. In a bracket of the character described, triangular frames each formed from a single strip of material and each including an inner vertical arm, a lower horizontal arm, and an outer inclined brace arm extending from the outer end of the horizontal arm to the vertical arm adjacent to the upper end thereof, said horizontal arm being extended inwardly beyond the lower end of the vertical arm; a brace strip secured through the extensions of the brackets and connecting the same; and an upper brace strip, said upper strip and the vertical and inclined arms of the respective brackets being all secured together.

1,488,438. DEVICE FOR REGULATING THE FLOW OF LIQUID IN ARTILLERY BRAKES DURING THE RETURN TO BATTERY. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Filed Oct. 5, 1922. Serial No. 592,645. 5 Claims. (Cl. 89—43.)



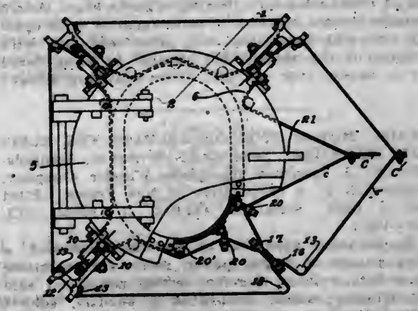
1. In a device for regulating the delivery of liquid in artillery brakes of the liquid type during the return of the cannon to battery, the combination of a braking cylinder containing the liquid, a piston operating therein, said piston being connected with the cannon, a recuperation cylinder, and means for the flow of liquid from the braking cylinder into the recuperation cylinder, through a duct, a second duct called return duct connecting the said cylinders, means provided in said duct for the return of the liquid into the said braking cylinder, a hollow extension formed upon the end of said recuperation cylinder, said return duct starting from the bottom of said extension, a diaphragm disposed within the said recuperation cylinder, said diaphragm being impelled towards the closed end of said cylinder by elastic means, a projecting portion provided upon said diaphragm and adapted to engage the hollow part of said extension during the return to battery and to close more and more the liquid flow passage at the inlet end of said extension during the return of said diaphragm.



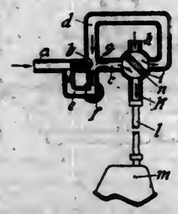
1,488,439. CANNON WITH VARIABLE CHARGE. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Original application filed Feb. 17, 1922, Serial No. 537,285. Divided and this application filed Apr. 26, 1923. Serial No. 634,838. 5 Claims. (Cl. 89—17.)

5. In a cannon for firing with variable charges, the combination of a normal powder chamber disposed at the front part of the breech, additional chambers coaxial with the said normal chamber and communicating

therewith, said additional chambers increasing in diameter towards the rear, a single breech-block adapted to close the last additional chamber, a firing device disposed in the said breech-block and inert plugs adapted to be maintained in the walls of the said additional chambers in place of the charges.

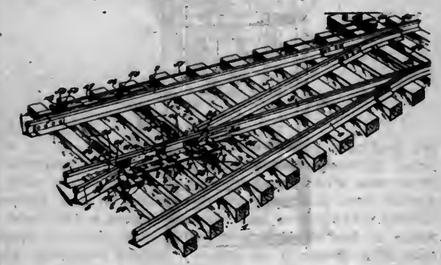


1,488,440. ASH-SIFTING ATTACHMENT FOR STOVES. BRUCE C. ROBINSON and JOHN S. COLLINS, Syracuse, N. Y. Filed May 12, 1922. Serial No. 560,368. 2 Claims. (Cl. 126—245.)



1. A stove having its ash pit provided with supporting guides and a sifter reciprocably mounted upon said guides beneath the stove grate, and operating means including a hand lever disposed exteriorly of the stove and connected with said sifter, said guides consisting of cross sectional angular fingers projecting from opposite walls of the ash pit and disposed in overlapping relation with the bottom wall of the sifter.

1,488,441. QUICK-RELEASE DEVICE FOR TANK CLOSURES. JOHN SANDERS, Denver, Colo., assignor to Safety Tank Drainage Co., a Common Law Trust, E. M. Davis, J. B. Forshay, John Sanders, C. E. Wampler, L. K. Haney, and Carle Whitehead, trustees, all of Denver, Colo. Filed Aug. 11, 1922. Serial No. 581,091. 5 Claims. (Cl. 220—55.)



1. The combination of a port, a closure, a plurality of clamping devices spaced circumferentially of the port, and means operative of said clamping devices whereby they may be entirely withdrawn beyond the circumference of the closure.

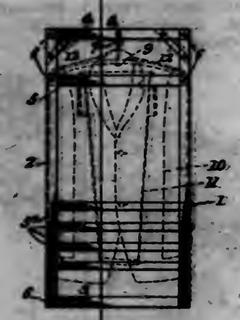
1,488,442. ARTIFICIAL-BREATHING APPARATUS. HANS WILHELM CHRISTIAN SCHRÖDER, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Finkenberg, Lubeck, Germany. Filed Aug. 18, 1921. Serial No. 493,483. 5 Claims. (Cl. 128—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an artificial breathing apparatus of the kind described, a circulating system, a conduit for delivering respiratory gas thereto for admixture with air in said system, and a valve-controlled by-pass connected with said system and conduit at points upon opposite sides of the point of connection of said conduit with said system and adapted to supply additional respiratory gas to said circulating system whereby the proportion of gas is increased without increasing the volume of the gas and air mixture.

1,488,443. MONORAIL FROG. WILLIAM SCHWIBS, Seattle, Wash. Filed July 18, 1923. Serial No. 652,385. 6 Claims. (Cl. 246—388.)

3. In a monorail frog for actuation simultaneously with a switch point including a frog rail disposed at the intersection of the siding and main track rails for fulcruming movement in a horizontal plane into alining relation alternately with said rails, locks pivotally and operatively supported on opposite sides of each end of the frog rail, a supporting base for the frog rail, abutments with certain of which certain diagonally opposite locks engage for locking the frog rail against movement in one direction, means for holding the frog rail against movement in the opposite direction, and means for tilting the locks upwardly to free them from engagement with the abutments whereby the frog rail may be moved.

1,488,444. TONSORIAL APPLIANCE. JOHN P. SHEA, Boston, Mass. Filed Feb. 17, 1921. Serial No. 445,746. 1 Claim. (Cl. 2—54.)

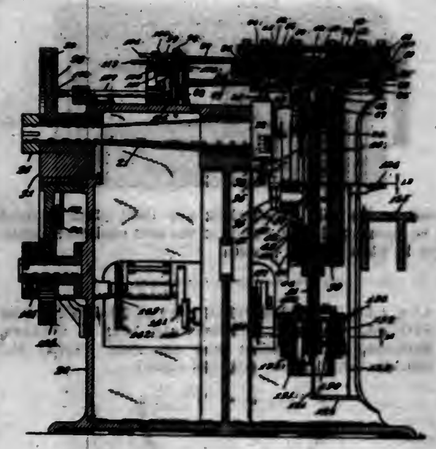


A barber's mantle comprising a single sheet of thin material having a fibre-like nap and having a hem at the top edge thereof formed by turning a portion of said sheet back upon itself and securing it thereto in such manner as to form a tube of less length than the width of said mantle, the said tube being so located as to enable the side edges of the mantle to overlap at certain times; draw strings in said tube, one end of each of which is attached to said mantle adjacent an end of said

tube, in such manner as to cause the top edge of the mantle to be gathered snugly about the neck of the wearer

at that point and to cause said side edges to overlap when said strings are pulled; and means to secure said side edges in overlapped position.

1,488,445. CLOTHES DRAMER. WILLIAM G. SUBERING, Greenville, S. C. Filed Oct. 6, 1922. Serial No. 592,862. 6 Claims. (Cl. 206—7.)



1. A frame for supporting clothing comprising relatively light thin standards, upper and lower rails collapsibly connecting the standards, and means carried by the upper rail for supporting a garment hanger, substantially as described.

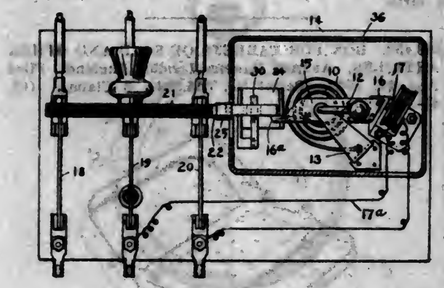
1,488,446. MACHINE FOR FORMING GEARS OR OTHER POLYGONAL ARTICLES. GEORGE H. STEVENSON, Indianapolis, Ind., assignor to Stevenson Gear Company, Indianapolis, Ind., a Corporation of Delaware. Filed May 6, 1921. Serial No. 467,503. 23 Claims. (Cl. 90—8.)

1. The combination with a work holder, a cutting tool, means for causing relative cutting movement between the cutting tool and work holder, and means for varying the position of the tool relative to the work holder to cause successive cutting operations, of clamping means co-related with the cutting tool, and means, synchronized with the means for causing relative cutting movement, to alternately move the clamping means toward and from the cutting tool.

10. The combination with an annular tool holder provided with a plurality of tool seats, of an plurality of tools mounted in said seats, a rotatable member associated with the tool holder and engaging the tools to

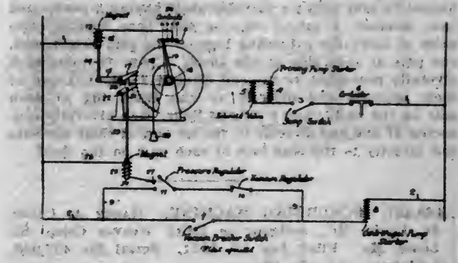
shift the same in their seats, means for advancing said rotatable member, and other means for alternately advancing and regressing said rotatable member.

1,488,447. FLEXIBLE SHINGLE. JOHN A. TOPPING, Chicago, Ill., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 23, 1922. Serial No. 538,495. 2 Claims. (Cl. 108—8.)



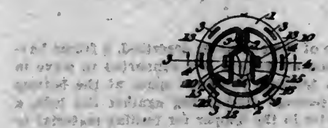
1. A flat shingle of flexible bitumen impregnated material of rectangular form, having opposite edges slotted diagonally toward one end of the shingle to form oppositely extending tabs lying in a plane coinciding with the plane of the shingle, but capable of being flexed away to engage over the edge of an overlying shingle.

1,488,448. MOTOR STOP OR RELEASE FOR ELECTRIC SWITCHES. SCHUYLER S. WHEELER, Bernardsville, N. J., assignor to Crocker-Wheeler Company, Ampere, N. J., a Corporation of New Jersey. Filed Nov. 5, 1920. Serial No. 422,093. 7 Claims. (Cl. 200—109.)



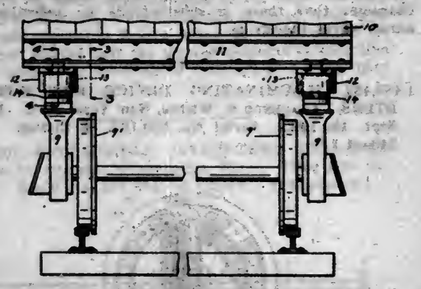
1. In electrical apparatus of the class described, a holding magnet of limited power, means for energising it, a switch, a latch therefor, setting means for said latch, tripping means, comprising a hammer, subject to the holding power of the energized magnet, when said setting means has operated on said latch to lock the switch, and, when said magnet is de-energized to release said hammer, permitting the hammer to strike and trip said latch and allow the switch to open, said setting means constituting a tail extension of said

hammer, means for pivotally supporting said hammer and its setting means, and means for subjecting said hammer and setting means to tension when said setting means has locked the switch.



3. In apparatus of the class described, a latch, having a securing and a releasing position, a power-operated hammer, and releasing means in addition to the weight of the hammer for restraining the action of the hammer upon said latch.

1,488,449. PUMP SYSTEM. CHARLES J. BURKHARDT, Hazleton, Pa. Filed July 14, 1923. Serial No. 651,571. 4 Claims. (Cl. 103—22.)

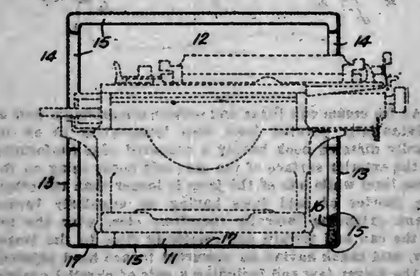


1. In a pump system, a main pump, a priming pump therefor, means automatically starting the main pump when primed, means automatically stopping the priming pump after it has performed its function, means automatically restarting the priming pump on failure of the main pump to function after priming, and means limiting the repetition of the cycle.

1,488,450. SNAP FASTENER. JOSEPH W. DEWS, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 16, 1923. Serial No. 639,345. 4 Claims. (Cl. 24—218.)

1. In a snap fastener socket member, a stud-engaging spring composed of a circular outer portion having reentrant ends in parallel contact for a portion of their length and then divergent to form stud-engaging shoulders and extending farther within the circular portion in parallel relation and having their tips turned outwardly into contact with the circular outer portion so that when the fastener stud enters or leaves the socket these terminal portions function resiliently.

1,488,451. CAR MOUNTING. ELMER A. LAUGHLIN, Oregon, Ill. Filed July 16, 1921. Serial No. 485,161. 10 Claims. (Cl. 105—179.)



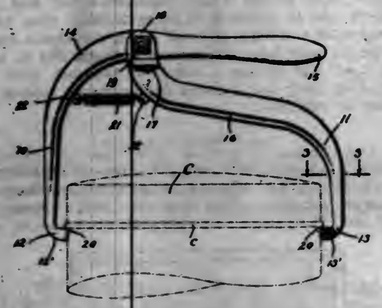
1. The combination with a car body and a truck therefor, of bearings on said truck arranged at opposite sides thereof and permitting of both longitudinal and pivotal movements between the sides of said body and the sides of said truck, substantially as described.

1,488,452. HANDLE CONSTRUCTION FOR PANEL-BOARD SWITCHES. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 31, 1922. Serial No. 578,583. 7 Claims. (Cl. 200—172.)

4. In a construction of the character described the combination of a switch including an operating lever, a face plate having a slot through which said lever projects and in which it is operable, said lever having a head with a locking shoulder and a detachable tubular handle for said lever having a slot in its end to admit said head and having a notch to interlock with said locking shoulder and a spring for yieldingly holding said handle on said lever.

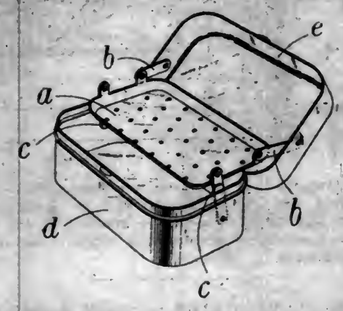
1,488,453. SILENCING DEVICE FOR TYPEWRITERS AND THE LIKE. FRANCIS L. MCLAUGHLIN, Montreal, Quebec, Canada. Filed Aug. 19, 1922. Serial No. 583,065. 8 Claims. (Cl. 197—186.)

1. A silencing device for typewriters comprising means to intercept sound waves to be positioned close to the back and ends of a typewriter and embodying end and



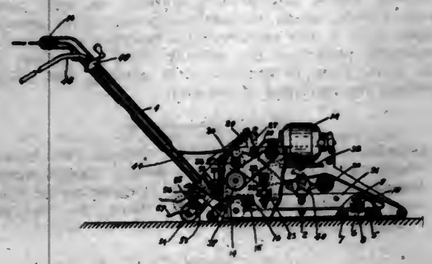
back members, the end members being formed to permit movement of a typewriter carriage outwardly of the vertical planes thereof, the said means being of such a character that there is substantially no reflection of sound waves therefrom.

1,488,454. ILLUMINATING DEVICE FOR MOTOMETERS. CLARENCE E. WHITE, New York, N. Y. Filed Sept. 19, 1922. Serial No. 589,123. 5 Claims. (Cl. 240—1.)



1. In combination with a motometer including a casing having slotted walls and a thermometer visible through the slots mounted in the casing, an illuminator comprising luminous plates located in the casing and extending at right angles to the slotted walls.

1,488,455. ICE-CREAM-CAN LIFTER AND CARRIER. JOSEPH E. CHASE, Schenectady, N. Y., assignor, by mesne assignments, to Van Wie & Chase Corporation, Gloversville, N. Y., a Corporation of New York. Filed Feb. 13, 1922. Serial No. 536,214. 1 Claim. (Cl. 294—106.)



An ice cream can lifter and carrier comprising a pair of substantially parallel jaws each terminating in an inwardly directed hook having a concaved edge conforming to the exterior surface of the can, said hooks being on the same level while one of the jaws is longer than the other, the shorter of said jaws having an angularly turned shank extending laterally therefrom close over the top of the can and toward and relatively close to the longer jaw, said shank having an upwardly turned head adjacent to the longer jaw and including a pair of parallel upright lugs, and the longer jaw being provided with an angularly turned shank extending between said lugs and terminating in a handle the center of which is about midway between the two jaws, a horizontal pivot passing through said lugs and the latter mentioned shank, and a contractile spring extending horizontally between the longer jaw and the headed portion of the shorter jaw, substantially as set forth.

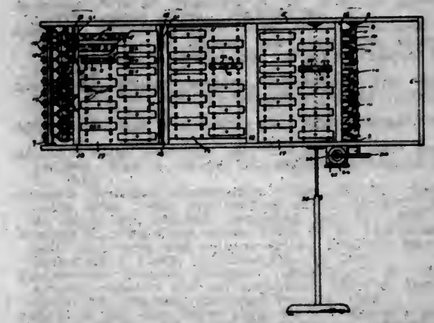
1,488,456. BOX FOR TABLETS OF SOAP AND OTHER ARTICLES. ARTHUR HARPER, London, England. Filed Apr. 21, 1922. Serial No. 555,834. 3 Claims. (Cl. 45—28.)

1. A box for tablets of soap and the like comprising in combination a sheet metal body; a sheet metal lid member hinged to said body; a movable shelf having a perforated base member, a raised edge on said base member, two pairs of upwardly extending lugs on the said raised edge, one pair at each side of the shelf; a pair of links, each pivotally connected at one end directly to the box and at their opposite end directly to the front lug of each pair on the shelf; and a pair of links, each pivotally connected at one end directly to the lid and at their opposite end directly to the rear lugs of each pair on the shelf.

1,488,457. SCRUBBING MACHINE. HARRY A. CRISP, St. Louis, Mo., assignor to Edith Weaver Crisp, St. Louis, Mo. Filed Jan. 17, 1921. Serial No. 437,945. 5 Claims. (Cl. 15—99.)

3. In a machine of the character described, a frame having an open bottom, an endless belt supported to move in the frame and to traverse the open space at the bottom thereof, a liquid passage discharging against the belt, a hopper, a feed device in the hopper for feeding material to the liquid, and power mechanism for operating the feed device.

1,488,458. CLOSURE. FREDERIC ECAUBERT, New York, N. Y. Filed June 5, 1922. Serial No. 566,137. 12 Claims. (Cl. 220—24.)



1. In a closure structure, a body having spaced engaging members each with a contact surface which from one end thereof to the other increases continuously in

distance from the center of the said body, and a cover also having engaging members thereon, with each engaging

member of the cover having a contact surface with portions thereof at correspondingly variable distances from the center of the cover.

1,488,459. TRAVELING COPY FOR TYPISTS. THOMAS A. BIGGS, Sioux City, Iowa, and ANDREW E. VANCE, Long Beach, Calif. Filed July 20, 1922. Serial No. 576,402. 5 Claims. (Cl. 35—12.)

1. A device of the class described comprising a copy means including a plurality of lines of printed elements, and screening means for concealing said elements and adapted at determined points to reveal a limited number of said elements, one of said means being movable with respect to the other longitudinally of the lines, whereby the printed elements are successively revealed, said copy means and screening means being so constructed, arranged and related that the printed elements of each line will be revealed at intervals of time different from those of the other lines.

1,488,460. COLLAPSIBLE CARPENTER'S TOOL BOX. AARON E. SCHEER, Minneapolis, Minn. Filed Oct. 30, 1922. Serial No. 597,864. 6 Claims. (Cl. 220—6.)

1.
